**Documents Incorporated by Reference into the**
**Credit Suisse International Irish Registration Document**

The following documents attached hereto are incorporated by reference into the Irish Registration Document of Credit Suisse International (CSI) and have been filed with the Irish Stock Exchange:

1) Historical and Financial information of CSI:

- the 2013 Annual Report of CSI (the “CSI Annual Report 2013”) which contains the audited financial statements of the Issuer for the year ended 31 December 2013 and a report of the Issuer’s auditors;

- the 2012 Annual Report of CSI (the “CSI Annual Report 2012”) which contains the audited financial statements of the Issuer for the year ended 31 December 2012 and a report of the Issuer’s auditors;

- the Interim Report of CSI for the six months ended 30 June 2014 (the “CSI Interim Report”) which contains the unaudited financial statements of the Issuer for the six months ended 30 June 2014;

2) Fourth Quarter 2014 Earnings Release on Form 6-K

the Form 6-K of Credit Suisse AG filed with the SEC on 12 February 2015 (the “Form 6-K Dated 12 February 2015”), which contains the 2014 Fourth Quarter Earnings Release of the Group within which there is unaudited information for the Group for the three and twelve months ended 31 December 2014, except that the information on page 4 under “Credit Suisse Group reports 4Q14 and full-year 2014 results” and on page 21 under “Quarterly results documentation” and “Contacts” is not incorporated by reference;

3) Third Quarter 2014 Financial Report for the Group

the Form 6-K of Credit Suisse AG filed with the Securities and Exchange Commission (the “SEC”) on 31 October 2014 (the “Form 6-K Dated 31 October 2014”) which contains the 2014 Third Quarter Financial Report of the Group within which there is unaudited information for the three and nine months ended 30 September 2014, except that the information on pages 1-2 under “Dear Shareholders” is not incorporated by reference;

4) Third Quarter 2014 Earnings Release on Form 6-K

the Form 6-K of Credit Suisse AG filed with the SEC on 23 October 2014 (the “Form 6-K Dated 23 October 2014”) which contains the 2014 Third Quarter Earnings Release which contains unaudited information for the Group for the three and nine months ended 30 September 2014, except that the information on page 3 under the heading “Credit Suisse Group reports 3Q14 and 9M14 results” is not incorporated by reference;

5) Second Quarter 2014 Financial Report / Six Months Financial Information for the Bank

the Form 6-K of Credit Suisse AG filed with the SEC on 31 July 2014 (the “Bank Form 6-K Dated 31 July 2014”), which contains: (i) an “Introduction”; (ii) “Forward-looking Statements”; (iii) “Key information”, (iv) “Operating and financial review and prospects”, and (v) Exhibits and includes the following documents exhibited thereto (1) “Ratio of earnings to fixed charges” (2) “‘Letter regarding unaudited financial information from the Independent Registered Public Accounting Firm” (3) the 2014 Second Quarter Financial Report of the Group within which there is unaudited information for the Group for the three and six months ended 30 June 2014, except that the information on pages 1–2 under “Dear shareholders” is not incorporated by reference and (4) the 2014 Bank Six Months Financial Statements within which there are unaudited financial statements for the six months ended 30 June 2014;

6) Second Quarter 2014 Earnings Release on Form 6-K

the Form 6-K of Credit Suisse AG filed with the SEC on 22 July 2014 (the "Form 6-K Dated 22 July 2014"), which contains the 2014 Second Quarter Earnings Release of the Group within which there is unaudited information for the Group for the three and six months ended 30 June 2014, except that the information on page 3 under "Credit Suisse Group reports 2Q14 and 6M14 results" is not incorporated by reference;

7) Media Release on Form 6-K

the Form 6-K of Credit Suisse Group AG and Credit Suisse AG Dated 19 May and filed with the SEC on 20 May 2014 (the "Form 6-K Dated 19 May 2014") which contains a media release announcing a comprehensive and final settlement regarding all outstanding U.S. cross-border matters including agreements with the U.S. Department of Justice, the New York State Department of Financial Services, the Board of Governors of the U.S. Federal Reserve System and, as previously announced, the U.S. Securities and Exchange Commission;

8) First Quarter 2014 Financial Report on Form 6-K

the Form 6-K of Credit Suisse AG filed with the SEC on 2 May 2014 (the "Form 6-K Dated 2 May 2014"), which contains the 2014 First Quarter Financial Report of the Group within which there is unaudited information for the Group for the three months ended 31 March 2014, except that the information on pages 1-2 under "Dear Shareholders" is not incorporated by reference;

9) First Quarter 2014 Earnings Release on Form 6-K

the Form 6-K of Credit Suisse AG filed with the SEC on 16 April 2014 (the "Form 6-K Dated 16 April 2014"), which contains the 2014 First Quarter Earnings Release of the Group within which there is unaudited information for the Group for the three months ended 31 March 2014, except that the information on page 2 of the Earnings Release under the heading "Credit Suisse Group reports 1Q14 results" is not incorporated by reference;

10) Historical Financial Information of the Bank and the Group for 2013

the Form 20-F of Credit Suisse Group AG and Credit Suisse AG filed with the SEC on 3 April 2014 (the "Group Annual Report 2013"), which contains the 2013 Annual Report of the Group within which there are audited financial statements of the Bank for the year ended 31 December 2013 and a report of the Bank's auditors, except that the information on pages 5-8 under "Message from the Chairman and the Chief Executive Officer" is not incorporated by reference; and

11) The restated Fourth Quarter Financial Information for the Group on Form 6K/A

the Form 6-K/A of Credit Suisse AG filed with the SEC on 3 April 2014 (the "Form 6-K/A Dated 3 April 2014"), which contains the restated 2013 Fourth Quarter Financial Report of the Group within which there is unaudited information for the Group for the three and twelve months ended 31 December 2013, except that the information appearing at the front of the Financial Report, after the Financial highlights table, beginning with the title "Dear shareholders" and ending with the paragraphs entitled "Performance of our businesses in the fourth quarter and the full-year 2013" (inclusive), is not incorporated by reference.

# Strategic Report for the Year ended 31 December 2013

The Directors present their Annual Reports and the Financial Statements for the year ended 31 December 2013.

## Business Review

### Profile

Credit Suisse International ('CSi' or the 'Bank') is a bank domiciled in the United Kingdom. CSi together with its subsidiaries is referred to as the 'CSi group'.

CSi is a global market leader in over-the-counter ('OTC') derivative products from the standpoints of counterparty service, innovation, product range and geographic scope of operations. CSi offers a range of interest rate, currency, equity, commodity and credit-related OTC derivatives and certain securitised products. CSi's business is primarily client-driven, focusing on transactions that address the broad financing, risk management and investment concerns of its worldwide client base. CSi enters into derivative contracts in the normal course of business for market-making, positioning and arbitrage purposes, as well as for risk management needs, including mitigation of interest rate, foreign currency and credit risk.

CSi is an unlimited company and an indirect wholly owned subsidiary of Credit Suisse Group AG ('CSG'). CSi is authorised under the Financial Services and Markets Act 2000 by the Prudential Regulation Authority ('PRA') and regulated by the Financial Conduct Authority ('FCA').

CSG, a company domiciled in Switzerland, is the ultimate parent of a worldwide group of companies (collectively referred to as the 'CS group'). CSG prepares financial statements under US Generally Accepted Accounting Principles ('US GAAP'). These accounts are publicly available and can be found at www.credit-suisse.com.

As a leading financial services provider, CS group is committed to delivering its combined financial experience and expertise to corporate, institutional and government clients and high-net-worth individuals worldwide, as well as to retail clients in Switzerland. CS group serves its diverse clients through two divisions, Investment Banking and Private Banking & Wealth Management, which co-operate closely to provide holistic financial solutions based on innovative products and specially tailored advice. Founded in 1856, CS group has a truly global reach today, with operations in over 50 countries and a team of more than 46,000 employees from approximately 150 different nations.

### Management and governance

A number of management and governance changes have been effected. Richard Thornburgh was appointed as a Non-Executive Director and Gary Bullock as an Executive Director of the CSi group's Board. Chris Carpmael, James Leigh-Pemberton and Tobias Guldimann have resigned. In addition, Stephen Kingsley and Richard Thornburgh were appointed as members of the Audit Committee. Noreen Doyle, Gary Bullock, Stephen Kingsley, Eric Varvel and Richard Thornburgh were appointed as members of the Risk Committee. The Board approved the formation of a Board Nomination Committee, comprising of Non-Executive Directors and chaired by Noreen Doyle, on 8 November 2013. All Board appointments are approved by CSG. These committees are described in more detail under 'Internal Control and Financial Reporting' on page 10.

As in previous years employee compensation remains the subject of the CS group Remuneration Committee. The recommendations are, however, reviewed by CSi's Board of Directors. Consistent with the requirements of the PRA Remuneration Code the Bank has broadened the 'Malus clause' which is applicable to Code staff, UK Managing Directors and certain other identified employees.

A London Conduct Risk Committee ('LCRC') has been established which is designed to enable the Bank to review the effectiveness of the Bank's conduct risk framework and challenge business leaders on the suitability and effectiveness of the measures and tools used in their businesses to identify, control and mitigate conduct risk. The LCRC is tasked with sponsoring and reviewing appropriate policies and procedures and monitoring peer group and regulatory statements and developments in the conduct risk space. The LCRC will consider reports covering conduct risk identification, conduct risk mitigation and conduct risk management information.

### Principal products/Principal product areas

The CSi group has three principal business divisions which are managed as a part of the Investment Banking Division of CS group:

- The Fixed Income Division ('FID') provides a complete range of derivative products including forward rate agreements, interest rate and currency swaps, interest rate options, bond options, commodities and credit derivatives for the financing, risk management and investment needs of its customers. FID also engages in underwriting, securitising, trading and distributing a broad range of financial instruments in developed and emerging markets including US Treasury and government agency securities, US and foreign investment-grade and high yield corporate bonds, money market instruments, foreign exchange and real estate related assets.
- The Equity Division engages in a broad range of equity activities for investors including sales, trading, brokerage and market making in international equity and equity related securities, options and futures and OTC derivatives.
- The Investment Banking Division ('IBD') includes financial advisory services regarding mergers and acquisitions, origination and distribution of equity and fixed income securities, leveraged finance and private equity investments and, in conjunction with FID and Equities, capital raising services.

During the year, Non-Strategic Units were created within the Fixed Income, Equity and Investment Banking divisions to further accelerate a reduction of capital and costs associated with non-strategic activities and positions and to shift resources to focus on strategic businesses and growth initiatives. Non-strategic activities and positions are defined as activities with significant capital absorption under new regulations and returns below expectations, activities with significant leverage exposures identified for de-risking, activities no longer feasible or economically attractive under emerging regulatory frameworks and assets and liabilities of business activities being wound down. Included in the Non-Strategic Units are the fixed income wind-down portfolio, legacy rates business, capital instruments that are not compliant with the Basel III capital framework and capital-intensive structured positions. The Non-Strategic Units have been retained within the divisions, so as to benefit from senior management's expertise and focus. The Non-Strategic Units have separate management within each division and a clear governance structure through the establishment of a Non-Strategic Oversight Board.

### Economic environment

In the UK, the annual rate of Consumer Price Index ('CPI') inflation decreased to 2.0% in 2013 compared to 2.7% in 2012. The Bank of England ('BOE') maintained interest rates at 0.5% throughout the year and the stock of asset purchases financed by the issuance of central bank reserves at GBP 375 billion. The unemployment rate fell to 7.1% at the end of 2013 from 7.7% in 2012. UK Gross Domestic Product ('GDP') grew from 0.4% in 2012 to 0.7% in 2013.

Market sentiment improved significantly at the start of 2013, reflecting a continued positive response to central bank policy measures. These included a move by the European Central Bank ('ECB') to support euro-area sovereign debt markets through its programme of Outright Monetary Transactions ('OMT'), and a commitment from the US Federal Reserve ('Fed') to continue its open ended purchase of assets until the labour market showed tangible signs of recovery. The US economy showed further signs of recovery, with the unemployment rate falling to a four year low and improvement in the housing market. In the Eurozone, a bailout package for Cyprus was agreed which imposed losses on bank deposits above the insurance threshold of EUR 100,000 and resulted in the restructure of the country's second largest bank. In Japan, the Bank of Japan ('BOJ') increased its inflation target from 1% to 2%.

Market expectations of a continuation of relaxed monetary policy were confirmed to some extent by the actions of Central Banks. The BOJ doubled the size of its asset purchase programme and announced a massive monetary stimulus program in April in order to achieve a 2% inflation target within two years, leading to a sharp fall in the yen and a rise in the volatility of yields on Japanese government bonds ('JGBs'). The Fed indicated that it was prepared to increase the pace of its asset purchases and the impact of automatic government spending cuts was less negative than expected in the US. In early May, the ECB cut its main refinancing rate to an historic low of 0.5% and signaled that a negative deposit rate was an available measure. There were concerns about tight bank credit conditions faced by small and medium sized enterprises, particularly in the southern member states of the Eurozone.

Economic conditions in Europe and the US improved in the second half of the year. The Eurozone economy continued its recovery, economic indicators for US showed solid improvement, though the labour and housing markets were less robust, having been negatively affected by a relatively sharp increase in long term government bond yields and mortgage rates. Among the emerging market economies China showed signs of economic stabilisation. Both the ECB and BOE committed to keep interest rates low for a prolonged period. On the other hand, Central Banks in India, Brazil and Indonesia increased interest rates in reaction to declining exchange rates and increasing inflationary pressure.

The BOE announced changes to the Sterling Monetary Framework designed to increase the availability, term and flexibility of the liquidity insurance it supplies to the UK banking system. Market interest rates in advanced economies increased in expectation that the Fed would announce a reduction in the pace of its monthly asset purchases ('tapering') following its September meeting. When tapering was not announced, market rates fell back somewhat. A decline in short rates was offset by improvements in the medium-term growth outlook in the United States and United Kingdom, leaving longer term interest rates broadly unchanged over the second half of the year.

## Financial markets and sector environment

At the start of 2013, equity markets benefited from easy monetary conditions and generally improved corporate earnings as well as a moderate increase in merger and acquisition ('M&A') activity. Overall, most equity markets added several percentage points by the end of March, reaching new multi-year highs, with the Nikkei 225 and the Swiss Market Index ('SMI') the best performing major indices. The S&P 500 closed above 1,550 index points, beating the previous high reached in 2007. From April to June, equity markets reversed some of their gains. This was mainly due to renewed uncertainties over the election outcome in Italy combined with a slowdown of momentum as a result of the Cyprus bail-out. While cyclical stocks and emerging markets underperformed due to fears of slowing economic growth, less monetary easing and rising interest rates, US markets and most European markets were resilient overall. Through the rest of the year, global equity markets had a strong performance, with most regions and sectors posting solid gains.

In fixed income, major benchmark government bond yields were volatile, increasing significantly until the beginning of September. Benefiting from their safe-haven status in Europe, German bunds outperformed US Treasuries during the period. However yields for Italian, Spanish and Portuguese bonds remained below the high levels seen in 2012. Following the Feds mid-September announcement to maintain its pace of monthly asset purchase at USD 85 billion, yields declined but started to increase again through the end of the year when the Fed announced in mid-December its decision to reduce the pace of monthly asset purchases to USD 75 billion.

In currency markets, overall the US dollar had a mixed performance against most currencies in 2013. At the beginning of 2013, the US dollar strengthened moderately against the Euro and the Swiss franc. The

Japanese yen was the weakest among the major currencies as yields in Japan fell and expectations of major easing by the BOJ increased. The British pound also weakened significantly against most currencies. In the middle of the year Commodity currencies, such as the Australian dollar, weakened sharply against the US dollar, mainly due a decline in commodity prices. Later in the year, the US dollar weakened against most major currencies. The weakness increased following the Feds mid-September announcement regarding future asset purchases. The Euro appreciated versus the US dollar as the Eurozone showed further signs of recovery from its recession. The British pound appreciated against both the US dollar and the Euro, reflecting improved UK economic growth and higher interest rates. Other economies such as Brazil, India, South Africa and Turkey experienced pressure on their foreign exchange rates as US yields increased.

With US yields rising and Chinese growth stabilising, the environment for commodities has been challenging. Commodity markets had a strong start to the year, however the gains reversed amid concerns that the Fed could reduce economic stimulus. Energy products were the best performing commodity class. Lower inflation expectations triggered significant selling activity in gold and silver markets. Gold was among the worst performing commodities during the year, with prices falling more than 28%.

2013 was a challenging year for the banking sector. The banking sector benefitted from Central Bank measures while the sector continued to transition to new regulatory requirements. Global banks took significant steps to restructure businesses and decrease costs while also taking measures to increase capital and liquidity ratios. Private banking clients maintained a cautious investment stance amid prevailing market uncertainty, with cash deposits remaining high despite low interest rates. In investment banking, equity trading volume was comparable to 2012. Trading volumes in Europe were generally stronger, while volumes in the US weakened. US fixed income volumes were slightly weaker compared to 2012 with stronger treasuries and corporate volumes being offset by weaker federal agency and mortgage backed volumes. Compared to 2012, activity from global completed M&A volumes increased slightly and global announced M&A volumes increased by more than 8%. Global equity underwriting volumes increased significantly and global debt underwriting volumes remained stable compared to 2012.

## Key performance indicators ('KPIs')

The Bank uses profitability and risk weighted assets as the primary KPIs to manage the financial position of the Bank. In a changing regulatory environment and with the increasing cost of capital these KPIs are critical to the successful management of the business to the Bank's objectives. Profitability and risk weighted assets are reviewed at the business line level to ensure a profitable and capital efficient business is maintained and developed, capital intensive businesses are closely monitored and reviewed.

## Performance

<u>Consolidated Statement of Income</u>

For the year ended 31 December 2013, the CSi group reported a net loss of USD 539 million (2012: USD 732 million loss). Net revenues amounted to USD 1,569 million (2012: USD 1,302 million). After operating expenses, the CSi group reported a loss before tax of USD 59 million (2012: USD 359 million loss).

While net revenues increased, 2013 was a challenging year with divisional revenues of USD 2,534 million (2012: USD 2,841 million). These comprised the following:

- A reduction in Fixed Income Division revenues of 18% to USD 1,495 million, marked by market uncertainty regarding US monetary policy and heightened volatility in emerging markets. As a result of the difficult operating conditions, the fixed income businesses were impacted by subdued corporate and institutional risk appetite and continued low client activity levels. Global Credit products reported decreased revenues in Structured Credit business and Investment Grade business decreased due to reduced trading volumes in secondary credit markets. The Rates business suffered in a record low interest rate environment, with volatilities and volumes falling considerably while client de-risking became a common theme.

- An increase in Equity Division revenues in 2013 of 7% to USD 873 million, benefiting from higher client activity, increased fund flows and investor rotation into equities throughout the year. Equity Derivatives revenues were bolstered by increased activity and favourable market moves in both Asia Pacific and America.

- A decrease of 18% in Investment Banking revenues to USD 166 million.

Included in the divisional revenues above, are non-strategic revenues of USD 90 million (2012: USD 46 million loss), mainly driven by one off gains in the Fixed Income Non-Strategic Unit as positions were exited.

Net revenues were positively impacted by the following items not included in the divisional revenues above:

- Reduced valuation losses of USD 108 million (2012: USD 160 million loss) as a result of fair value changes in issued structured notes due to changes in the CSi group's own creditworthiness arising from the tightening of credit curves in 2013.

- Reduced revenue sharing expenses for the period of USD 506 million (2012: USD 734 million). This relates to revenue sharing agreements between the CSi group and other CS group companies.

- Reduced treasury funding charges of USD 448 million (2012: USD 662 million). This primarily comprises excess funding charges on long term financing versus overnight funding rates, which are only allocated out to the businesses at the CS group level. Partially contributing to this reduction was the impact of tightening to credit curves in 2013, resulting in losses of USD 16 million (2012: USD 99 million loss) as a result of fair value changes in treasury issued debt due to changes in the CSi's own creditworthiness.

- Release of a USD 104 million valuation adjustment in relation to trades where the CSi group is a market maker. As a result of the adoption of IFRS 13 'Fair Value Measurements', the CSi group aligned its valuation methodology with USGAAP Topic 820 'Fair Value Measurement, and under both GAAPs the CSi group values to the mid-price where the CSi group is a market maker.

The CSi group's operating expenses were USD 1,628 million (2012: USD 1,661 million). Compensation and benefits cost decreased by USD 8 million in 2013, primarily due to a special pension contribution paid to the UK Pension Trust in 2012. General and administrative expenses decreased by USD 25 million, USD 147 million of which was as a result of a decrease in overhead expenses allocated from CS group, partially offset by an increase of USD 24 million in amortisation of internally developed software and an increase of USD 21 million in brokerage charges and clearing house fees.

Included in operating expenses is an expense of USD 57 million (2012: USD 38 million) in respect of the UK Bank Levy. The tax, applicable to all Banks and Banking groups operating in the UK, is charged on liabilities as at the statement of financial position date at a rate of 13.0 basis points for all short-term liabilities and 6.5 basis points for long-term liabilities, increasing to 15.6 and 7.8 basis points respectively in 2014.

Income tax expense for the year ended 31 December 2013 was USD 480 million (2012: USD 373 million). Included in the income tax expense is an amount of USD 319 million as a result of an impairment of the deferred tax asset ('DTA'), following an assessment by management as to whether the DTA can be realised. In addition, the DTA was further reduced by USD 187 million to reflect the reduction in the UK statutory tax rate.

Consolidated Statement of Financial Position

As at 31 December 2013, the CSi group had total assets of USD 510 billion (31 December 2012: USD 687 billion).

The reduction in total assets was primarily on account of a decrease of USD 157 billion in Trading financial assets at fair value through profit or loss to USD 394 billion (31 December 2012: USD 551 million). The decrease was primarily due to mark to market moves on interest rate derivative products. Associated with this is a decrease of USD 14 billion in Other assets to USD 40 billion (31 December 2012: 54 billion), due to a reduction in cash collateral provided on OTC derivatives. There has similarly been a decrease of USD 154 billion in Trading financial liabilities at fair value through profit or loss.

Other loans and receivables have decreased by USD 10 billion to USD 4 billion (31 December 2012: USD 14 billion, with a corresponding reduction in Long term debt which decreased by USD 10 billion to USD 21 billion (31 December 2012: USD 31 billion). This was as a result of the unwind of a CS group structured transaction.

Total shareholder's equity has increased by USD 9 billion to USD 25 billion (31 December 2012: USD 16 billion) as a result of a USD 10 billion issuance of participating shares, further described under Capital Resources below. This resulted in an increase in Cash and due from banks of USD 8 billion to USD 27 billion (31 December 2012: USD 19 billion) as surplus funding was placed on deposit within the CS group.

Off-Balance Sheet arrangements are highlighted in Note 34 – Guarantees and Commitments and Note 35 – Securitisations, Special Purpose Entities and Other Structured Transactions.

## Principal Risks and Uncertainties

The primary responsibility for risk management within CSi group lies with the Bank's senior business line managers. They are held accountable for all risks associated with their businesses, including counterparty risk, market risk, liquidity risk, operational risk, legal risk, settlement risk, country risk, reputational risk and conduct risk.

The Bank's risk management process is designed to ensure that there are sufficient independent controls to measure, monitor and control risks in accordance with the Bank's control framework and in consideration of industry best practices.

The way in which these risks are managed is detailed in the Directors' Report, and the risks are detailed in Note 39 – Financial Instruments Risk Position.

### Fair Value Measurement

Financial instruments carried at fair value are categorised under the three levels of the fair value hierarchy, where the significant inputs for the Level 3 assets and liabilities are unobservable.

Total Level 3 assets were USD 12.5 billion as at 31 December 2013 (31 December 2012: USD 12.7 billion), which was equivalent to 2.45% of total assets. Total Level 3 liabilities were USD 11.4 billion as at 31 December 2012 (31 December 2011: USD 11.2 billion), which was equivalent to 2.31% of total liabilities.

Fair Value disclosures are presented in Note 36 – Financial Instruments.

## Capital Resources

The Bank closely monitors its capital and liquidity position on a continuing basis to ensure ongoing stability and support of its business activities. This monitoring takes account of the requirements of the current regime and any forthcoming changes to the capital framework. CS group continues to provide confirmation that it will ensure that the Bank is able to meet its debt obligations and maintain a sound financial position over the foreseeable future.

The Bank is required at all times to monitor and demonstrate compliance with the relevant regulatory capital requirements of the PRA. The Bank has put in place processes and controls to monitor and manage the Bank's capital adequacy. No breaches were reported to the PRA during the year.

During the period, capital resources were increased through the drawdown of a USD 1.1bn Lower Tier 2 subordinated loan from Credit Suisse AG. In addition to this, in December 2013, CSi's Common Equity Tier 1 capital was increased by USD 10 billion in the form of participating shares, in preparation for the EU implementation of the Basel III capital framework. Specifically, Basel III introduced a number of new deductions from the capital base, and increased CSi's credit risk charges in several areas (e.g. CVA risk, exchange traded derivatives and exposures to financial institution counterparties).

Changes in subordinated debt are set out in Note 27 – Long Term Debt. Changes in capital are set out in Note 28 – Share Capital and Share Premium.

## Outlook

In 2013, CSi continued to make significant progress in executing its client-focused, capital-efficient strategy to meet emerging client needs and regulatory trends. CSi is progressing towards achieving specific goals to reduce its cost base and strengthen its capital position, and has operated under the Basel III capital framework, as implemented in the EU, since January 2014. CSi has further optimised its business footprint, continuing to shift resources to focus on growth in higher returning businesses. As a result of this progress, CSi believes that it is better positioned to perform in a challenging market environment and compete in its chosen businesses and markets around the world.

CSi remains committed to offering its clients a broad spectrum of equities, fixed income, and investment banking advisory products and services. CSi is focused on businesses in which the bank has a competitive advantage and is able to operate profitably with an attractive return on capital in the new regulatory environment. While the industry still faces significant adjustments to new regulatory requirements, CSi has significantly evolved its business model to one that is compliant with the Basel III regulatory framework, including exiting certain non-Basel III compliant businesses. CSi will continue to invest in its market-leading, high-returning businesses while optimising its risk weighted assets and cost base to further improve returns. As part of continuing to advance its business model, CSi created Non-Strategic Units towards the end of 2013 with the goal of reducing costs and capital in the non-strategic portfolio and redeploy resources to growth initiatives in higher returning businesses.

In light of recent developments such as heightened regulatory focus on leverage, conduct risk, additional capital resource requirements under Basel III, and the migration of markets towards cleared and electronic trading, CSi is focusing on high volume, high liquidity electronic trading as part of its effort to migrate the business model to simplified and primarily exchange-cleared products in derivatives and reduce capital intensive structured activity.

CSi will additionally continue to focus on cost initiatives, in a challenging market environment, while still being positioned to take advantage of favourable market opportunities when they arise. Looking ahead, CSi believes that its client-focused and cost-and capital-efficient strategy will allow the delivery of strong returns. CSi continues to refocus resources on opportunities in high-returning businesses such as securitised products, global credit products, cash equities and emerging markets, and to reduce the impact of the Non-Strategic Units.

# Directors' Report for the Year ended 31 December 2013

## International Financial Reporting Standards

The CSi group and Bank 2013 Financial Statements have been prepared in accordance with International Financial Reporting Standards ('IFRS') as adopted for use in the European Union ('EU').

The Financial Statements were authorised for issue by the directors on 21 March 2014.

## Dividends

No dividends were paid or are proposed for the year ended 31 December 2013 (2012: USD Nil).

## Directors

The names of the directors as at the date of this report are set out on page 1. Changes in the directorate since 31 December 2012 and up to the date of this report are as follows:

| **Appointment** | |
|---|---|
| Michael Hodgson | 28 March 2013 |
| Gael de Boissard | 28 March 2013 |
| Gary Bullock | 21 August 2013 |
| Richard Thornburgh | 21 August 2013 |

| **Resignation** | |
|---|---|
| James Leigh-Pemberton | 25 October 2013 |
| Tobias Guldimann | 31 December 2013 |
| Chris Carpmael | 01 January 2014 |

None of the directors who held office at the end of the financial year were directly beneficially interested, at any time during the year, in the shares of the Bank. Directors of the Bank benefited from qualifying third party indemnity provisions in place during the financial year and at the date of this report.

## Disclosure of Information to Auditors

The directors who held office at the date of approval of this Directors' Report confirm that, so far as they are each aware, there is no relevant audit information of which the CSi group's auditors are unaware and each director has taken all the steps that he ought to have taken as a director to make himself aware of any relevant audit information and to establish that the CSi group's auditors are aware of that information.

## Corporate Governance

### Internal Control and Financial Reporting

The directors are ultimately responsible for the effectiveness of internal control in the CSi group. Procedures have been designed for safeguarding assets; for maintaining proper accounting records; and for assuring the reliability of financial information used within the business, and for that provided to external users. Such procedures are designed to manage rather than eliminate the risk of failure to achieve business objectives and can only provide reasonable and not absolute assurance against material misstatement, errors, losses or fraud.

The key procedures that have been established are designed to provide effective internal control within the CSi group. Such procedures for the ongoing identification, evaluation and management of the significant risks faced by the CSi group have been in place throughout the year and up to 21 March 2014, the date of approval of the Credit Suisse International Annual Report for 2013.

Key risks identified by the directors are formally reviewed and assessed at least once a year by the Board, in addition to which key business risks are identified, evaluated and managed by operating management on an ongoing basis by means of procedures such as credit, market, operational and other authorisation limits, and segregation of duties.

The Board also receives regular reports on any risk matters that need to be brought to its attention. Significant risks identified in connection with the development of new activities are subject to consideration by the Board.

There are well-established budgeting procedures in place and reports are presented regularly to the Board detailing the performance of each principal business unit, variances against budget and prior year, and other performance data.

Committees

The Board delegates certain functions and responsibilities to the following committees:

Credit Suisse International Audit Committee

The purpose of the Committee is to:

- review the Internal Audit Plan to ensure its adequacy, as it pertains to the CSi group;
- review systems of accounting, internal controls, and compliance with regulatory and legal requirements, and on litigation;
- review quality and accuracy of financial reporting to external bodies;
- review other Internal Audit, regulatory examination reports and External Audit reports and management letters;
- review with the management and jointly with the Credit Suisse International Risk Committee, significant operational risk matters involving business processes and system infrastructure;
- review with management and jointly with the Credit Suisse International Risk Committee, significant matters of potential reputational risk;
- review the Annual Financial Statements on behalf of the Board; and
- report significant issues to the Board.

The Audit Committee members are Stephen Kingsley (Chair), Noreen Doyle and Richard Thornburgh. James Leigh-Pemberton left Credit Suisse and accordingly resigned from the Board and the Audit Committee during the year.

In reviewing the Credit Suisse International Annual Report 2013, the Audit Committee considered critical accounting estimates and judgements including the valuation of Level 3 assets and liabilities, and the recoverability of the deferred tax asset. The Audit Committee additionally considered the projected capital requirements in the next 12 months and, in this context, the continued access to appropriate funding to maintain adequate capital and liquidity positions.

Credit Suisse International Risk Committee

The purpose of the Committee is to:

- review and assess the integrity and adequacy of the risk management function of CSi group including processes and organisational structures;
- review and assess the CSi group's credit, market and operational risk including any large exposures;
- review the Internal Capital Adequacy Assessment Process ('ICAAP');
- review with the management and jointly with the Credit Suisse International Audit Committee, significant operational risk matters involving business processes and system infrastructure;

- review and assess the adequacy of the risk measurement methodologies including the Risk Appetite framework;
- review other major risk concentration as deemed appropriate;
- monitor the adequacy of the business continuity program;
- review with management and jointly with the Credit Suisse International Audit Committee, significant matters of potential reputational risk;
- review and advise on risk adjustments to remuneration schemes; and
- report significant issues to the Board.

The Risk Committee members are Richard Thornburgh (Chair), Noreen Doyle, Stephen Kingsley, Eric Varvel and Gary Bullock.

Credit Suisse International Nomination Committee

The purpose of the Committee is to:

- engage a broad set of qualities and competences when recruiting members to the Board of Directors ('BoD') and put in place a policy promoting diversity on the BoD;
- identify and recommend for approval, by the Company shareholder (Credit Suisse Group AG / Credit Suisse AG) candidates to fill BoD vacancies, having evaluated the balance of knowledge, skills, diversity and experience of the BoD;
- make recommendations to the BoD concerning the role of chairman and membership of the board committees, in consultation with the chairmen of those committees;
- prepare a description of the roles and capabilities for a particular appointment, and assess the time commitment required;
- decide on a target for the representation of the under-represented gender in the BoD and prepare a policy on how to increase the under-represented gender in the BoD to meet that target;
- periodically, and at least annually, assess the structure, size, composition and performance of the BoD and make recommendations to the BoD with regard to any changes;
- periodically, and at least annually, assess the knowledge, skills and experience of individual members of the BoD and of the BoD collectively, and report this to the BoD;
- periodically review the policy of the BoD for selection and appointment of senior management and review with the CEO the appointment of senior management; and
- in performing its duties and to the extent possible on an on-going basis, take account of the need to ensure that the BoD's decision making is not dominated by any one individual or small group of individuals in a manner that is detrimental to the interest of the Bank as a whole.

The Credit Suisse International Nomination Committee members are Noreen Doyle (Chair), Stephen Kingsley and Richard Thornburgh.

Credit Suisse International Disclosure Committee

The purpose of the Committee is to ensure compliance with the EU Prospectus and Transparency directives in relation to the listing by the Bank of debt securities on European exchanges. The Committee reviews and updates the Bank's disclosure document and ongoing disclosure requirements so as to provide investors with all such information as may reasonably be required to make an informed assessment of the Bank as an issuer of debt securities.

## Risk management

Overview

The Bank's risk management framework is based on transparency, management accountability and independent oversight. Risk management plays an important role in the Bank's business planning process and is strongly supported by senior management and the Board of Directors. The primary objectives of risk management are to protect the Bank's financial strength and reputation, while ensuring that capital is well deployed to support business activities and grow shareholder value. The Bank has implemented risk management processes and control systems and it works to limit the impact of negative developments by monitoring credit, market, liquidity, operational and reputational risks, and managing concentrations of risks.

Risk governance

The prudent taking of risk in line with the Bank's strategic priorities is fundamental to its business as part of a leading global banking group. To meet the challenges in a fast changing industry with new market players and innovative and complex products, the Bank seeks to continuously strengthen the risk function, which is independent of but closely interacts with the businesses, to ensure the appropriate flow of information. In 2012, the Bank made a series of changes to the risk governance framework designed to enhance the effectiveness of controls at all levels of the organisation. These changes included the appointment of a CRO with responsibility for overseeing the Bank's profile across all relevant risk types, the establishment of new risk committees at Board and senior management levels to increase the scrutiny over the Bank's risk exposures, and the introduction of new, more granular limits to provide additional controls over specific businesses, concentrations or particular risks. These changes are described in more detail below.

The Board of Directors set the overall framework for risk appetite and has delegated authority to establish more granular limits within the bounds of its overall risk limits to a UK Investment Banking Risk Management Committee, which is chaired by the Bank CRO and consists of senior risk and business managers. The purpose of the UK Investment Banking Risk Management Committee is to:

- ensure that proper standards for risk oversight and management are established;
- define and implement a risk appetite framework covering market, credit and operational risks and make recommendations to the Board on risk appetite;
- review the ICAAP and make recommendations to the Bank's Risk committee on capital;
- allocate risk capital and establish risk limits for individual businesses within authorities delegated by the Board;
- review the risk portfolio, set and approve limits and ceilings and other appropriate measures to monitor and manage the risk portfolio for the Bank; and
- review and implement appropriate controls over remote booking risk relating to the Bank.

Risk organisation

Risks arise in all of the Bank's business activities and cannot be completely eliminated, but they are monitored and managed through its internal control environment. The Bank's risk management organisation reflects the specific nature of the various risks in order to ensure that risks are taken within limits set in a transparent and timely manner.

The Bank's independent risk management function is headed by the Bank's CRO, who reports jointly to the Bank's CEO and the CRO of CS group. The Bank CRO is responsible for overseeing the Bank's risk profile across all risk types and for ensuring that there is an adequate independent risk management function. The Bank has strengthened the risk management function to provide a more dedicated focus on the risks at the Bank level, in addition to the global risk management processes applied by CS group.

The risk management function is responsible for providing oversight and establishing a framework to monitor and manage all risk matters through four primary risk departments: Strategic Risk Management ('SRM') assesses the Bank's overall risk profile on a strategic basis, recommending corrective action where necessary, and is also responsible for market risk management including measurement and limits; Risk Analytics and Reporting ('RAR') is responsible for risk analytics, reporting, risk model validation, systems implementation and policies; Credit Risk Management ('CRM') is responsible for approving credit limits, monitoring and managing individual exposures and assessing and managing the quality of credit portfolios and allowances, and includes the Credit Analytics department; and Operational Risk Managment ('ORM') is responsible for establishing a framework for managing operational risks including ensuring that operational risk policies are consistently implemented and helping understand, assess, and mitigate operational risks. The risk management function also addresses critical risk areas such as business continuity, technology risk and reputational risk management.

Committees are implemented at a senior management level to support risk management. The Reputational Risk and Sustainability Committee sets policies and reviews processes and significant cases relating to reputational risks. The Risk Processes and Standards Committee is responsible for establishing and approving standards regarding risk management and risk measurement, including methodology and parameters, for all CS group entities, including the Bank. The Credit Portfolio and Provisions Review Committee review the quality of the credit portfolio with a focus on the development of impaired assets and the assessment of related provisions and valuation allowances.

<u>Risk limits</u>

A sound system of risk limits is fundamental to effective risk management. The limits define CSi group's maximum risk appetite given management capabilities, the market environment, business strategy and financial resources available to absorb potential losses. The Bank uses an Economic Risk Capital ('ERC') limit structure to manage overall risk-taking. The overall risk limits for the Bank are set by the Board of Directors and are binding.

Within the bounds of the overall risk appetite of the Bank, as defined by the limits set by the Board, the UK Investment Banking Risk Management Committee and Bank CRO are responsible for setting specific limits deemed necessary to manage the concentration of risk within individual lines of business and across counterparties. The Bank has a range of more granular limits for individual businesses, concentrations and specific risks, including, limits on transactions booked from remote locations.

Market risk limit measures are typically based on Value at Risk ('VaR') or ERC, though they could also include exposure, risk sensitivity and scenario analysis. Credit risk limits include overall limits on portfolio credit quality and a system of individual counterparty credit limits used to mitigate concentration risks. These risk limits are binding and generally set to ensure that any meaningful increase in risk exposures is promptly escalated to more senior levels of management. In addition, the Bank has allocated operational risk capital to the businesses and has established thresholds for operational risk losses that trigger additional management action.

The majority of these limits are monitored on a daily basis, though those for which the inherent calculation time is longer (such as for ERC or some credit portfolio limits) are monitored on a weekly or monthly basis.

The Bank's financial risk management objectives and policies and the exposure of the CSi group to market risk, credit risk, liquidity risk and currency risk are outlined in Note 39 – Financial Instruments Risk Positions.

Economic risk capital and position risk

ERC is the core CS group-wide risk management tool and is integrated throughout, being calculated, reported and monitored for both CS group as a whole and for material subsidiaries, such as the Bank. Its purpose is the measurement and reporting of all quantifiable risks and the measurement of risk in terms of economic realities rather than regulatory or accounting rules. It also provides a common terminology for risk across CS group, which increases risk transparency and improves knowledge-sharing. The development and usage of ERC methodologies and models have evolved over time without a standardised approach within the industry; therefore comparisons across firms may not be meaningful.

Position Risk, which is a component of the ERC framework, is used to assess, monitor and report risk exposures throughout CS group. Position Risk ERC is the level of unexpected loss in economic value on the entity's portfolio of positions over a one-year horizon that is exceeded with a given small probability (1% for risk management purposes; 0.03% for capital management purposes).

As at 31 December 2013 the 99% Position Risk was USD 2,348 million (2012: USD 2,179 million) for CSi group which was within the agreed limit set by Board of Directors[1].

### Selected European credit risk exposures

CSi's exposure to certain European countries is summarised in the table below. Gross credit risk exposures, presented on a risk-based view, include loans and loan commitments, investments (such as cash securities and other investments) and all exposures of derivatives (not limited to credit protection purchased and sold), after consideration of legally enforceable netting agreements. Net exposures include the impact of risk mitigation such as Credit Default Swaps ('CDS') and other hedges, guarantees, insurance and collateral (primarily cash and securities). Collateral values applied for the calculation of the net exposure are determined in accordance with risk management policies and reflect applicable margining considerations.

Credit risk exposure to these European countries is managed as part of the overall CSi and CS group risk management process. This management includes the use of country limits, and the performance of scenario analyses on a regular basis including analyses on indirect sovereign credit risk exposures arising from exposures to selected European financial institutions.

| **31 December 2013** | **Sovereign** | | **Financial Institutions** | | **Corporate** | |

| **Total** | **5.3** | **1.0** | **4.2** | **2.1** | **1.4** | **1.1** |

## Employment of Disabled Persons

The CSi group adopts the CS group's policies relating to the employment of disabled persons and gives full and fair consideration to disabled persons in employment applications, training and career development including those who become disabled during their period of employment.

The CS group has a Disability Interest Forum in place as a UK initiative. This forum:

- provides a support network;

[1] Unaudited. 31 December 2013 limit: USD 3,100 million

- facilitates information sharing for those with a disability or those caring for a family member or friend with a disability; and
- invites all those who want to participate and who have an interest.

The forum raises awareness of issues related to disability and promotes an environment where disabled employees are supported and are given the opportunity to reach their full potential.

## Donations

During the year the CSi group made USD 2,080 (2012: USD 204) of charitable donations. There were no political donations made by the CSi group during the year (2012: USD Nil).

## Auditors

Our auditors, KPMG Audit Plc, has instigated an orderly wind down of business and notified the Bank that they are not seeking reappointment. It is proposed that KPMG LLP be appointed auditors of the Bank and will hold office from the start of the financial year ending 31 Dec 2014 until the end of the next period for appointing auditors under section 485(2) of the Companies Act 2006, and that their remuneration be fixed by the Directors.

## Subsequent Events

In February 2014, CSG provided employees who hold outstanding 2011 Partner Asset Facility (PAF2) awards with the opportunity to exchange their PAF2 awards. PAF2 awards were linked to a portfolio of CSG's credit exposures, providing risk offset and capital relief. Due to regulatory changes, this capital relief was no longer available after December 31, 2013. As a result, CSG terminated the PAF2 awards and exchanged them at fair value for other compensation awards. Refer to Note 30 – Share-based Compensation and other Compensation Benefits for further information on the exchange of PAF2 awards.

## Statement of Directors' Responsibilities

The Directors are responsible for preparing the Annual Report of the CSi group and the Bank in accordance with applicable law and regulations.

Company law requires the directors to prepare group and parent company financial statements for each financial year. Under that law they are required to prepare the group financial statements in accordance with IFRSs as adopted by the EU and applicable law and have elected to prepare the parent company financial statements on the same basis.

Under company law the Directors must not approve the financial statements unless they are satisfied that they give a true and fair view of the state of affairs of the CSi group and Bank and of their profit or loss for that period. In preparing each of the CSi group and Bank financial statements, the Directors are required to:

- select suitable accounting policies and then apply them consistently;
- make judgements and estimates that are reasonable and prudent;
- state whether they have been prepared in accordance with IFRS as adopted by the EU; and
- prepare the financial statements on the going concern basis unless it is inappropriate to presume that the CSi group and the Bank will continue in business.

The Directors are responsible for keeping adequate accounting records that are sufficient to show and explain the CSi group and Bank's transactions and disclose with reasonable accuracy at any time the financial position of the CSi group and Bank and enable them to ensure that its financial statements comply with the Companies Act 2006. They have general responsibility for taking such steps as are reasonably open to them to safeguard the assets of the CSi group and to prevent and detect fraud and other irregularities.

The directors are responsible for the maintenance and integrity of the corporate and financial information included on the Bank's website. Legislation in the UK governing the preparation and dissemination of financial statements may differ from legislation in other jurisdictions.

Signed on behalf of the Board of Directors on 21 March 2014 by:

Michael Hodgson

Director

# Independent Auditor's Report to the Members of Credit Suisse International

We have audited the financial statements of Credit Suisse International for the year ended 31 December 2013 set out on pages 19 to 163. The financial reporting framework that has been applied in their preparation is applicable law and International Financial Reporting Standards ('IFRSs') as adopted by the EU and, as regards the parent company ('the Bank') financial statements, as applied in accordance with the provisions of the Companies Act 2006.

This report is made solely to the Bank's members, as a body, in accordance with Chapter 3 of Part 16 of the Companies Act 2006. Our audit work has been undertaken so that we might state to the Bank's members those matters we are required to state to them in an auditor's report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the Bank and the Bank's members, as a body, for our audit work, for this report, or for the opinions we have formed.

## Respective responsibilities of directors and auditors

As explained more fully in the Directors' Responsibilities Statement set out on page 16, the directors are responsible for the preparation of the financial statements and for being satisfied that they give a true and fair view. Our responsibility is to audit, and express an opinion on, the financial statements in accordance with applicable law and International Standards on Auditing (UK and Ireland). Those standards require us to comply with the Auditing Practices Board's (APB's) Ethical Standards for Auditors.

## Scope of the audit of the financial statements

A description of the scope of an audit of financial statements is provided on the Financial Reporting Council's website at www.frc.org.uk/auditscopeukprivate.

## Opinion on financial statements

In our opinion:

- the financial statements give a true and fair view of the state of the CSi group's and of the Bank's affairs as at 31 December 2013 and of the CSi group's loss for the year then ended;
- the CSi group financial statements have been properly prepared in accordance with IFRS as adopted by the EU;
- the Bank financial statements have been properly prepared in accordance with IFRS as adopted by the EU and as applied in accordance with the provisions of the Companies Act 2006; and
- the financial statements have been prepared in accordance with the requirements of the Companies Act 2006 and, as regards the CSi group financial statements, Article 4 of the IAS Regulation.

## Opinion on other matters prescribed by the Companies Act 2006

In our opinion the information given in the Strategic Report and the Directors' Report for the financial year for which the financial statements are prepared is consistent with the financial statements; and information given in the Corporate Governance Statement set out on pages 9 to14 with respect to internal control and risk management systems in relation to financial reporting processes is consistent with the financial statements.

## Matters on which we are required to report by exception

We have nothing to report in respect of the following matters where the Companies Act 2006 requires us to report to you if, in our opinion:

- adequate accounting records have not been kept by the Bank, or returns adequate for our audit have not been received from branches not visited by us;
- the Bank financial statements are not in agreement with the accounting records and returns;
- certain disclosures of Directors' remuneration specific by law are not made;
- we have not received all the information and explanations we require for our audit;
- a Corporate Governance Statement has not been prepared by the Bank.

## Consolidated Statement of Cash Flows For the Year ended 31 December 2013

| | Reference to notes | 2013 | 2012 |
|---|---|---|---|
| **Cash flows from operating activities (USD million)** | | | |
| Loss before tax for the period | | (59) | (359) |
| **Adjustments to reconcile net loss to net cash used in operating activities** | | | |
| Non-cash items included in net loss before tax and other adjustments: | | | |
| Impairment, depreciation and amortisation | 22,23 | 255 | 218 |
| Loss on disposal of property and equipment | 22 | 17 | 1 |
| Loss on disposal of intangible assets | 23 | - | 2 |
| Accrued interest on long term debt | 5 | 406 | 585 |
| (Release of allowance for loan losses)/Provision for credit losses | 7 | (7) | (44) |
| Impairment on loan commitments | | - | (5) |
| Foreign exchange losses | | (47) | (17) |
| Impairment on investment property | 18 | 62 | 21 |
| Provisions | 26 | (10) | 1 |
| Gain on acquisition of PFS business (net of cash acquired) | 40 | - | - |
| **Cash generated before changes in operating assets and liabilities** | | **617** | **403** |
| Net decrease/(increase) in operating assets: | | | |
| Securities purchased under resale agreements and securities borrowing transactions | | 2,405 | 5,303 |
| Trading financial assets at fair value through profit or loss | | 157,505 | 23,269 |
| Financial assets designated at fair value through profit or loss | | (436) | (1,427) |
| Other loans and receivables | | 9,046 | 883 |
| Other assets | | 14,423 | 1,787 |
| **Net decrease/(increase) in operating assets** | | **182,943** | **29,815** |
| Net (decrease)/increase in operating liabilities: | | | |
| Deposits | | 192 | 1,923 |
| Securities sold under repurchase agreements and securities lending transactions | | 162 | (2,097) |
| Trading financial liabilities at fair value through profit or loss | | (153,769) | (31,357) |
| Financial liabilities designated at fair value through profit or loss | | (4,815) | 5,292 |
| Short term borrowings | | (14,094) | (3,024) |
| Other liabilities and provisions | | (5,425) | 2,116 |
| Share-based compensation | | 43 | 11 |
| **Net (decrease)/increase in operating liabilities** | | **(177,706)** | **(27,136)** |
| Income taxes refund | | 6 | 3 |
| Income taxes paid | | (2) | (3) |
| **Net cash generated from/(used in) operating activities** | | **5,858** | **3,082** |
| **Cash flows from investing activities (USD million)** | | | |
| Capital expenditures for property, equipment and intangible assets | 22,23 | (200) | (247) |
| **Net cash used in investing activities** | | **(200)** | **(247)** |
| **Cash flows from financing activities (USD million)** | | | |
| Issuances of long term debt | | 2,739 | 2,341 |
| Repayments of long term debt | | (12,321) | (946) |
| Issue of shares | 28 | 10,000 | 2,202 |
| Increase in noncontrolling interest | | (22) | 22 |
| **Net cash generated from financing activities** | | **396** | **3,619** |
| **Net increase/(decrease) in cash and due from banks** | | **6,054** | **6,454** |
| Cash and due from banks at beginning of period | | 19,022 | 12,568 |
| **Cash and due from banks at end of period** | | **25,076** | **19,022** |
| Cash and due from banks | | 27,280 | 18,690 |
| Interest-bearing deposits with banks | | 285 | 2,525 |
| Demand deposits | 24 | (2,489) | (2,193) |
| **Cash and due from banks at end of period** | | **25,076** | **19,022** |

Refer to Note 28 – Share Capital and Share Premium for significant non-cash transactions.

## Bank Statement of Cash Flows For the Year ended 31 December 2013

| **Cash and due from banks at end of period** | | **24,913** | **18,885** |

Refer to Note 28 – Share Capital and Share Premium for significant non-cash transactions.

## Notes to the consolidated financial statements

# Notes to the Financial Statements for the Year ended 31 December 2013

## 1. General

Credit Suisse International ('CSi' or the 'Bank') is a bank domiciled in the United Kingdom. The address of the Bank's registered office is One Cabot Square, London, E14 4QJ. The Consolidated Financial Statements for the year ended 31 December 2013 comprise CSi and its subsidiaries (together referred to as the 'CSi group'). The Consolidated Financial Statements were authorised for issue by the Directors on 20 March 2014.

## 2. Significant Accounting Policies

### a) Statement of compliance

Both the Bank financial statements and the CSi group financial statements have been prepared on a going concern basis and approved by the Directors in accordance with International Financial Reporting Standards as adopted by the EU ('Adopted IFRS'). On publishing the parent company financial statements here together with the CSi group financial statements, the Bank is taking advantage of the exemption in s408 of the Companies Act 2006 not to present its individual Statement of Income and related notes.

### b) Basis of preparation

The Consolidated Financial Statements are presented in United States Dollars (USD) rounded to the nearest million. They are prepared on the historical cost basis except that the following assets and liabilities are stated at their fair value: derivative financial instruments, financial instruments held for trading, financial instruments that are hedged as a part of a designated hedging relationship and financial instruments designated by CSi group as at fair value through profit or loss.

The preparation of Financial Statements in conformity with adopted IFRS requires management to make judgements, estimates and assumptions that affect the application of policies and reported amounts of assets and liabilities, income and expenses. The estimates and associated assumptions are based on historical experience and various other factors that are believed to be reasonable under the circumstances, the results of which form the basis of making the judgements about carrying values of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates. Critical accounting estimates and judgements applied to these Financial Statements are set out in Note 3 – Critical Accounting Estimates and Judgements in Applying Accounting policies.

The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the period in which the estimate is revised if the revision affects only that period or in the period of revision and future periods if the revision has a significant effect on both current and future periods.

The CSi group and the Bank have unrestricted and direct access to funding sources of CSG. After making enquiries of the CSG, the Directors of the Bank have received a confirmation that CSG will ensure that the Bank maintains a sound financial position and is able to meet its debt obligations for the foreseeable future. Accordingly the Directors have prepared these accounts on a going concern basis.

### Standards and Interpretations effective in the current period

The CSi group has adopted the following amendments in the current year:

- Amendments to IAS 1 Presentation of Items of Other Comprehensive Income: In June 2011, the IASB issued "Presentation of Items of Other Comprehensive Income" (Amendments to IAS 1). The amendments require entities to group together items within Other Comprehensive Income that will and will not subsequently be reclassified to the profit or loss section of the income statement. The amendments also reaffirm existing requirements that items in Other

Comprehensive Income and profit or loss should be presented as either a single statement or two consecutive statements. The amendments impact presentation only, and therefore the adoption of the amendments on 1 January 2013 did not have an impact on the CSi group's financial position, results of operation or cash flows.

- Amendments to IAS 19 Employee Benefits: In June 2011, the IASB issued Amendments to IAS 19 "Employee Benefits" (IAS 19). Among other changes, the amendments eliminate the option that allowed an entity to defer the recognition of changes in net defined benefit liability and amend the disclosure requirements for defined benefit plans and multi-employer plans. The CSi group participates in defined benefit plans that are CS group schemes, in which the CSi group is not the sponsoring entity, therefore no retirement benefit obligation is recognised in the Statement of Financial Position and defined contribution accounting is applied. As a result, the adoption of IAS19R on 1 January 2013 did not have an impact on the CSi group's financial position, results of operation or cash flows.

- IFRS 13 Fair Value Measurement: In May 2011, the IASB issued IFRS 13 "Fair Value Measurement" (IFRS 13). IFRS 13 defines fair value, sets out a framework for measuring fair value and requires certain disclosures about fair value measurements. IFRS 13 applies to IFRSs that require or permit fair value measurements or disclosures about fair value measurements, except in specified circumstances. The adoption of IFRS 13 on 1 January 2013 resulted in a credit to the income statement of USD 104 million as a result of a change in application of valuation methodology in marking instruments within the bid-offer spread. In addition IFRS 13 replaces and expands the disclosure requirements about fair value measurements in other IFRSs. Please refer to Note 36 – Financial Instruments for further information.

- IFRS 7 Disclosures - Offsetting Financial Assets and Financial Liabilities: In December 2011, the IASB issued amendments to IFRS 7 "Disclosures – Offsetting Financial Assets and Financial Liabilities" (IFRS 7). The amendments require disclosures about the effect or potential effects of offsetting financial assets and financial liabilities and related arrangements on an entity's financial position. The amendments to IFRS 7 relate to disclosure only and therefore did not have an impact on the CSi group's financial position, results of operation or cash flows. Please refer to Note 40 – Offsetting of Financial Assets and Financial Liabilities for further information.

- Annual Improvements to IFRS 2009-2011 Cycle: In May 2012, The IASB issued "Annual Improvements to IFRSs 2009-2011 Cycle" (Improvements to IFRS), which contain numerous amendments to IFRS that the IASB considers non-urgent but necessary. The Improvements to IFRS comprise amendments that result in accounting changes for presentation recognition or measurement purposes, as well as terminology or editorial amendments related to a variety of individual standards. The adoption of the Improvements to IFRS on 1 January 2013 did not have an impact on the CSi group's financial position, results of operation or cash flows.

### Standards and Interpretations endorsed by the EU and not yet effective

The CSi group is not yet required to adopt the following standards and interpretations which are issued by the IASB but not yet effective.

- IFRS 10 Consolidated Financial Statements: In May 2011, the IASB issued IFRS 10, "Consolidated Financial Statements" (IFRS 10). The objective of IFRS 10 is to establish principles for the presentation and preparation of consolidated financial statements when an entity controls one or more other entities. IFRS 10 builds on existing principles by identifying the concept of control as the determining factor in whether an entity should be included within the consolidated financial statements of the parent company. The standard provides additional guidance to assist in the determination of control where this may be difficult to assess. IFRS 10 is effective for annual periods beginning on or after 1 January 2013, however, the EU requires adoption for annual periods beginning on or after 1 January 2014. The adoption of IFRS 10 on 1 January 2014, did not have a material impact on the CSi group's financial position, results of operation or cash flows.

- IFRS 11 Joint Arrangements: In May 2011, the IASB issued IFRS 11 "Joint Arrangements" (IFRS 11). IFRS 11 specifies that a party to a joint arrangement determines the type of joint arrangement in which it is involved by assessing its rights and obligations. IFRS 11 is effective for annual periods beginning on or after 1 January 2013, however, the EU requires adoption for annual periods beginning on or after 1 January 2014. The adoption of IFRS 11 on 1 January 2014, did not have an impact on the CSi group's financial position, results of operation or cash flows.

- IFRS 12 Disclosure of Interests in Other Entities: In May 2011, the IASB issued IFRS 12 "Disclosure of Interests in Other Entities" (IFRS 12). IFRS 12 requires entities to disclose information that enables users of the financial statements to evaluate the nature of and any associated risks of its interests in other entities and the effects of those interests on its financial position, financial performance and cash flows. IFRS 12 requires certain disclosures, for subsidiaries, joint arrangements and associates and introduces new requirements for unconsolidated structured entities. IFRS 12 is effective for annual periods beginning on or after 1 January 2013, however, the EU requires adoption for annual periods beginning on or after 1 January 2014. As IFRS 12 requires disclosures only, the adoption thereof on 1 January 2014 did not have a material impact on the CSi group's financial position, results of operation or cash flows.

- IAS 27 Separate Financial Statements: In May 2011, the IASB issued an amended version of IAS 27 "Separate Financial Statements" (IAS 27). IAS 27 outlines the accounting and disclosure requirements for separate financial statements, IAS 27 is effective for annual periods beginning on or after 1 January 2013, however, the EU requires adoption for annual periods beginning on or after 1 January 2014. The adoption of IAS 27 on 1 January 2014 had no impact as CSi does not prepare separate financial statements.

- IAS 28 Investments in Associates and Joint Ventures: In May 2011, the IASB issued IAS 28 "Investments in Associates" (IAS 28). The objective of IAS 28 is to prescribe the accounting for investments in associates and to set out the requirements for the application of the equity method when accounting for investments in associates and joint ventures. The revised IAS 28 standard is effective for annual periods beginning on or after 1 January 2013, however, the EU requires adoption for annual periods beginning on or after 1 January 2014. The adoption of IAS 28 on 1 January 2014, did not have a material impact on the CSi group's financial position, results of operation or cash flows.

- IAS 32 Offsetting Financial Assets and Financial Liabilities: In December 2011, the IASB issued amendments to IAS 32 "Offsetting Financial Assets and Financial Liabilities" (IAS 32). The amendments address inconsistencies in current practice when applying the offsetting criteria in IAS 32 'Financial Instruments – Presentation'. The adoption of IAS 32 on 1 January 2014, did not have a material impact on the CSi group's financial position, results of operation or cashflows.

- Transition guidance for IFRS 10, IFRS 11 and IFRS 12: In June 2012, the IASB issued "Consolidated Financial Statements, Joint Arrangements and Disclosures of Interest in Other Entities; Transition Guidance" (Amendments to IFRS 10, IFRS 11 and IFRS 12). The amendments are intended to provide additional transition relief in IFRS 10, IFRS 11 and IFRS 12, by "limiting the requirement to provide adjusted comparative information to only the preceding comparative period". Also, amendments were made to IFRS 11 and IFRS 12 to eliminate the requirement to provide comparative information for periods prior to the immediately preceding period. The Amendments to IFRS 10, IFRS 11 and IFRS 12 are effective for annual periods beginning on or after 1 January 2013. The CSi group has adopted the requirements of this amendment with the provisions of IFRS 10, IFRS 11 and IFRS 12 as at 1January 2014. As the transition guidance is clarifications to IFRS 10,11,12, the impact is included in the adoption of the standards respectively.

**Standards and Interpretations not endorsed by the EU and not yet effective**

The CSi group is not yet required to adopt the following standards and interpretations which are issued by the IASB but not yet effective and have not yet been endorsed by the EU.

- IFRS 9 Financial Instruments: In November 2009 the IASB issued IFRS 9 "Financial Instruments" (IFRS 9) covering the classification and measurement of financial assets which introduces new requirements for classifying and measuring financial assets. In October 2010, the IASB reissued IFRS 9, which incorporated new requirements on the accounting for financial liabilities. IFRS 9 is effective for annual periods beginning on or after 1 January 2018. The CSi group continues to evaluate the impact of adopting IFRS 9.

- Investment Entities (Amendments to IFRS 10, IFRS 12 and IAS 27): In October 2012, the IASB issued "Investment Entities Amendments to IFRS 10, IFRS 12 and IAS 27" (Investment Entities Amendment). Under IFRS 10, reporting entities were required to consolidate all investees they control, however the Investment Entities Amendment provides an exception and requires investment entities to measure particular subsidiaries at fair value through profit or loss, rather than consolidate them. The Investment Entities Amendment sets out disclosure requirements for investment entities. When endorsed the adoption of Investment Entities amendments will not have an impact on the CSi group's financial position, results of operation or cash flows.

- IFRIC 21 Levies: In May 2013, the IASB issued "Levies" (IFRIC 21). The Interpretation clarifies that the obligating event that gives rise to a liability to pay a levy is the activity described in the relevant legislation that triggers the payment of the levy. IFRIC 21 is effective for annual periods beginning on or after 1 January 2014. When endorsed the adoption of IFRIC 21 will not have a material impact on the CSi group's financial position, results of operation or cash flows.

- Annual Improvements to IFRSs 2010-2012 Cycle and 2011-2013 Cycle: In December 2013, the IASB issued both "Annual Improvements to IFRSs Cycle 2010-2012" and "Annual Improvements to IFRSs Cycle 2011-2013" (Improvements to IFRSs), which contain numerous amendments to IFRS that the IASB considers non-urgent but necessary. The Improvements to IFRSs are effective for annual periods beginning on or after 1 July 2014. The CSi group is currently evaluating the impact of adopting these Improvements to IFRSs.

The accounting policies have been applied consistently by all CSi group entities.

Certain reclassifications have been made to the prior year Consolidated Financial Statements of the CSi group to conform to the current year's presentation and had no impact on net income/ (loss) or total shareholders' equity.

### c) Basis of consolidation

The Consolidated Financial Statements include the results and positions of the CSi group and its subsidiaries (including special purpose entities). The Consolidated Financial Statements include the Statement of Income, Statement of Financial Position, Statement of Cash Flows, Statement of Changes in Equity and the related Notes of the CSi group.

A subsidiary is an entity in which the CSi group holds, directly or indirectly, more than 50% of the outstanding voting rights, or which it otherwise has the power to control. Control is achieved where the CSi group has the power to govern the financial and operating policies of an investee entity so as to obtain benefits from its activities. In assessing control, the potential voting rights that presently are exercisable are taken into account. The results of subsidiaries acquired are included in the consolidated financial statements from the date that control commences until the date that control ceases. The CSi group reassesses consolidation status at least every quarterly reporting date.

The CSi group also consolidates subsidiaries when the substance of the relationship between the CSi group and the subsidiary indicates that the subsidiary is controlled by the CSi group in accordance with the Standing Interpretations Committee Interpretation (SIC) No. 12, 'Consolidation – Special Purpose Entities' (SIC 12). The acquisition method of accounting is used to account for the acquisition of subsidiaries. The cost of an acquisition is measured at the fair value of the assets given, equity instruments issued and liabilities incurred or assumed. Acquisition related costs such as legal or consulting fees are expensed in the period in which they are incurred. The excess of the cost of an acquisition over the CSi group's share of the fair value of the identifiable net assets acquired is recorded as goodwill. If the acquisition cost is below the fair value of the identifiable net assets (negative goodwill), a gain may be reported in other income.

The effects of intercompany transactions and balances have been eliminated in preparing the Consolidated Financial Statements. Noncontrolling interests are presented in the Consolidated Statement of Financial Position as a separate component of equity. Net profit attributable to noncontrolling interests is shown separately in the Consolidated Statement of Income.

### d) Equity method investments

An equity method investment is an entity in which the CSi group has significant influence, but not control, over the operating and financial management policy decisions. This is generally demonstrated by the CSi group holding in excess of 20%, but no more than 50%, of the voting rights. In assessing significant influence, potential voting rights that are presently exercisable are taken into account. Other factors that are considered in determining whether the CSi group has significant influence over another entity include representation on the board of directors, the interchange of managerial personnel and material intercompany transactions between the CSi group and the entity. Consideration of those factors might indicate that the CSi group has significant influence over another entity even though the CSi group's investment is less than 20% of the voting rights.

Equity method investments are initially recorded at cost and increased (or decreased) each year by the CSi group's share of the post-acquisition net income (or loss), or other movements reflected directly in the equity of the equity method investment. Goodwill arising on the acquisition of an equity method investment is included in the carrying amount of the investment. When the CSi group's share of losses in an equity method investment equals or exceeds the recorded share of profits, including any other unsecured long-term receivables, the CSi group does not recognise further losses, unless it has incurred obligations or made payments on behalf of the entity.

### e) Foreign currency

The Bank's functional currency is United States Dollars ('USD'). Transactions denominated in currencies other than the functional currency of the reporting entity are translated at the foreign exchange rate ruling at the date of the transaction. Monetary assets and liabilities denominated in foreign currencies at the reporting date are translated to USD at the foreign exchange rate ruling at that date. Foreign exchange differences arising from translation are recognised in the Consolidated Statement of Income. Non-monetary assets and liabilities denominated in foreign currencies at the reporting date are not revalued for movements in foreign exchange rates.

Assets and liabilities of CSi group companies with functional currencies other than USD are translated to USD at foreign exchange rates ruling at the Statement of Financial Position date. The revenue and expenses of these CSi group companies are translated to USD at the average foreign exchange rates for the year. The resulting translation differences are recognised directly in a separate component of equity. On disposal, these translation differences are reclassified to the Consolidated Statement of Income as part of gain or loss on disposal.

### f) Cash and due from banks

For the purpose of preparation and presentation of the Consolidated Statement of Cash Flows, cash and cash equivalents comprise the components of cash and due from banks that are short term, highly liquid instruments with original maturities of three months or less which are subject to an insignificant risk of changes in their fair value and that are held or utilised for the purpose of cash management.

Where cash is received or deposited as collateral, the obligation to repay or the right to receive that collateral is recorded in 'Other assets' or 'Other liabilities'.

The CSi group holds money on behalf of clients in accordance with the client money rules of the UK's FCA. This money is included within 'Cash and due from banks' on the Statement of Financial Position and the corresponding liability is included in 'Other liabilities'.

### g) Securities purchased or sold under resale or repurchase agreements

Securities purchased under resale agreements ('reverse repurchase agreements') and securities sold under repurchase ('repurchase agreements') do not constitute economic sales and are therefore treated as collateralised financing transactions. In reverse repurchase agreements, the cash advanced, including accrued interest is recognised on the Consolidated Statement of Financial Position as an asset. In repurchase agreements, the cash received, including accrued interest is recognised on the Consolidated Statement of Financial Position as a liability.

Securities received under reverse repurchase agreements and securities delivered under repurchase agreements are not recognised or derecognised unless all or substantially all the risks and rewards are obtained or relinquished. The CSi group monitors the market value of the securities received or delivered on a daily basis and provides or requests additional collateral in accordance with the underlying agreements.

Interest earned on reverse repurchase agreements and interest incurred on repurchase agreements is recognised on an effective yield basis and recorded as interest income or interest expense.

### h) Securities borrowing and lending transactions

Securities borrowing and securities lending transactions are generally entered into on a collateralised basis. The transfer of the securities themselves is not reflected on the Consolidated Statement of Financial Positions unless the risks and rewards of ownership are also transferred. If cash collateral is advanced or received, securities borrowing and lending activities are recorded at the amount of cash collateral advanced (cash collateral on securities borrowed) or received (cash collateral on securities lent). The sale of securities received in a security borrowing transaction results in the recognition of a trading liability (short sale).

The CSi group monitors the market value of the securities borrowed and lent on a daily basis and provides or requests additional collateral in accordance with the underlying agreements. Fees are recognised on an accrual basis and interest received or paid is recognised on an effective yield basis and recorded as interest income or interest expense.

### i) Derivative financial instruments and hedging

All freestanding derivative contracts are carried at fair value in the Consolidated Statement of Financial Position regardless of whether these instruments are held for trading or risk management purposes.

Derivatives classified as trading assets and liabilities include those held for trading purposes and those used for risk management purposes that do not qualify for hedge accounting. Derivatives held for trading purposes arise from proprietary trading activity and from customer-based activity, with changes in fair value included in 'Net gains/(losses) from financial assets/liabilities at fair value through profit or loss'. Derivative contracts, which are both designated and qualify for hedge accounting, are reported in the Consolidated Statement of Financial Position as 'Other assets' or 'Other liabilities'.

### Embedded derivatives

When derivative features embedded in certain contracts that meet the definition of a derivative are not considered closely related to the host instrument, either the embedded feature will be accounted for separately at fair value, with changes in fair value recorded in the Consolidated Statement of Income, or the instrument, including the embedded feature, is accounted for at fair value either under the fair value option or due to classifcation as held for trading. In the latter case the entire instrument is recorded at fair value with changes in fair value recorded in the Consolidated Statement of Income. If separated for measurement purpose, the derivative is recorded in the same line in the Consolidated Statement of Financial Position as the host instrument.

### j) Financial assets and liabilities at fair value through profit or loss

The CSi group classifies certain financial assets and liabilities as either held for trading or designated at fair value through profit or loss. Financial assets and liabilities with either classification are carried at fair value. Fair value is defined as the price that would be received to sell an asset or transfer a liability in an orderly transaction between market participants at the measurement date. When determining the fair value of an instrument, the CSi group maximises the use of relevant observable inputs and minimises the use of unobservable inputs. Where the fair value is not determined on quoted price in an active market for an identical asset or liability or on a valuation technique that uses data from observable inputs, then reserves are established for unrealised gains or losses evident at the inception of the contracts so that no gain or loss is recorded at inception. Such reserves are amortised to income over the life of the instrument or released into income when observable inputs becomes available. Related realised and unrealised gains and losses are included in 'Net gains/ (losses) from financial assets/liabilities at fair value through profit or loss'.

### Trading financial assets and financial liabilities at fair value through profit or loss

Trading financial assets and financial liabilities include mainly debt and equity securities, derivative instruments, loans and precious metals. These assets and liabilities are included as part of the trading portfolio based on management's intention to sell the assets or repurchase the liabilities in the near term, and are carried at fair value.

### Financial instruments designated as held at fair value through profit or loss

Financial assets and liabilities are only designated as held at fair value through profit or loss if the instruments contain an embedded derivative, or when doing so results in more relevant information, because either:

(i) it eliminates or significantly reduces an inconsistency in measurement or recognition (sometimes referred to as an 'accounting mismatch') that would otherwise arise from measuring assets or liabilities or recognising the gains and losses on them on different bases. This election is used for instruments that would otherwise be accounted for under an accrual method of accounting where their economic risks are hedged with derivative instruments that require fair value accounting. This election eliminates or significantly reduces the measurement mismatch between accrual accounting and fair value accounting;

(ii) a group of financial assets, financial liabilities or both is managed and its performance is evaluated on a fair value basis, in accordance with a documented risk management or investment strategy, and information about the CSi group is provided internally on that basis to the entity's key management personnel. This election is used for instruments purchased or issued by business units that manage their performance on a fair value basis. For all instruments elected under this criterion, the business maintains a documented strategy that states that these instruments are risk managed on a fair value basis. Additionally, management relies upon the fair value of these instruments in evaluating the performance of the business.

The Fair Value Option has been applied to certain debt instruments, equity securities and loans and the related financial assets and financial liabilities are presented as 'Financial assets designated at fair value through profit or loss' or 'Financial liabilities designated at fair value through profit or loss'. Movements in 'Financial assets designated at fair value through profit or loss' or 'Financial liabilities designated at fair value through profit or loss' are recognised in 'Net gains/(losses) from financial assets/liabilities at fair value through profit or loss'. Once designated this election is irrevocable. All fair value changes related to these financial instruments held at fair value through profit or loss are recognised in 'Net gains/(losses) from financial assets/liabilities at fair value through profit or loss'.

### k) Recognition and derecognition

#### Recognition

The CSi group recognises financial instruments on its Consolidated Statement of Financial Position when the CSi group becomes a party to the contractual provisions of the instrument.

#### Regular-way securities transactions

A regular-way purchase or sale is a purchase or sale of a financial asset under a contract whose terms require delivery of the asset within the time frame established generally by regulation or convention in the marketplace concerned. The CSi group recognises regular-way purchases or sales of financial assets at the settlement date unless the instrument is a derivative or designated at fair value through profit or loss, in which case trade date accounting applies.

#### Derecognition

The CSi group enters into transactions where it transfers assets recognised on its Consolidated Statement of Financial Position, but retains either all risks and rewards of the transferred assets or a portion of them. If all or substantially all risks and rewards are retained, the transferred assets are not derecognised from the Consolidated Statement of Financial Position. Transactions where substantially all risk and rewards are retained include securities purchased or sold under repurchase agreements, securities borrowing and lending transactions, and sales of financial assets with concurrent return swaps on the transferred assets.

In transactions where the CSi group neither retains nor transfers substantially all risks and rewards of ownership of a financial asset, it derecognises the asset if control over the asset is lost. The rights and obligations retained in the transfer are recognised separately as assets and liabilities as appropriate. In transfers where control over the asset is retained, the CSi group continues to recognise the asset to the extent of its continuing involvement, determined by the extent to which it is exposed to changes in the value of the transferred asset.

The CSi group derecognises a financial liability when its contractual obligations are discharged or cancelled or expire. Where the CSi group has a financial liability and a financial instrument is exchanged for a new financial instrument with the same counterparty, which is substantially different, or when an existing financial instrument classified as a financial liability is substantially modified, the old financial instrument is deemed to be extinguished and a new financial liability is recognised. Any gain or loss due to derecognition of the extinguished instrument is recorded in the Consolidated Statement of Income. Where a modification and not an extinguishment is deemed to have occurred, the difference is adjusted to the carrying value of the new instrument and reclassified into income using the effective interest method.

### Securitisation

The CSi group securitises assets, which generally results in the sale of these assets to special purpose entities, which in turn issue securities to investors. The transferred assets may qualify for derecognition in full or in part, under the above mentioned policy on derecognition of financial assets.

Interests in securitised financial assets may be retained in the form of senior or subordinated tranches, interest only strips or other residual interests (collectively referred to as 'retained interests'). Provided the CSi group's retained interests do not result in consolidation of the special purpose entity, nor in continued recognition of the transferred assets, these retained tranches are typically recorded in 'Trading financial assets at fair value through profit or loss'. Gains or losses on securitisation are recognised in Statement of Income. The line item in the Consolidated Statement of Income, in which the gain or loss is presented, will depend on the nature of the asset securitised.

### l) Other loans and receivables

Other loans and receivables are initially recorded at fair value, plus any directly attributable transaction costs and subsequently are amortised on an effective interest method, less impairment losses. In the event of an impairment loss the effective interest will be re-estimated.

When calculating the effective interest, the CSi group estimates cash flows considering all contractual terms of the financial instruments including premiums, discounts, fees and transactions costs but not future credit losses.

### Impairment on other loans and receivables

The CSi group assesses at each Consolidated Statement of Financial Position date whether there is objective evidence that a significant loan position or a portfolio of loans is impaired. A significant individual loan position or portfolio of loans is impaired and impairment losses are incurred if, and only if, there is objective evidence of impairment as a result of one or more loss events that occurred after the initial recognition of the asset and prior to the Consolidated Statement of Financial Position date ('a loss event') and that loss event or events has had an impact on the estimated future cash flows of the financial asset or the portfolio that can be reliably estimated.

All individually significant loans are assessed for specific impairment. Individually significant loans found not to be impaired are then collectively assessed for impairment that has been incurred, but not yet been identified. Loans that are not individually significant are assessed collectively for impairment. Loans subject to collective impairment testing are grouped to loan portfolios on the basis of similar risk, industry or country rating. Objective evidence that an individual loan is impaired can include significant financial difficulty of the borrower, default or delinquency by the borrower and indications that a borrower will enter bankruptcy. Objective evidence that a loan portfolio is impaired can include changes of the payment status of borrowers in the group or economic conditions that correlate with defaults in the group.

Many factors can affect the CSi group's estimate of the impairment losses on loans, including volatility of default probabilities, rating migrations and loss severity. The estimate of the component of the allowance for specifically identified credit losses on impaired loans is based on a regular and detailed analysis of each loan in the portfolio considering collateral and counterparty risk. For certain non-collateral dependent impaired loans, impairment charges are measured using the present value of estimated future cash flows discounted at the asset's original effective interest rate. For collateral dependent impaired loans, impairment charges are measured using the value of the collateral. The estimation of impairment for a loan portfolio involves applying historical loss experience, adjusted to reflect current market conditions, to homogeneous loans based on risk rating and product type.

The estimation of impairment for a loan portfolio involves applying historical loss experience, adjusted to reflect current market conditions, to homogeneous loans based on risk rating and product type. The amount of the loss is recognised in the Consolidated Statement of Income in 'Provision for credit losses'.

The methodology and assumptions used for estimating future cash flows are reviewed regularly to reduce any differences between loss estimates and actual loss experience. An allowance for impairment is reversed only if the amount of the impairment loss decreases and the decrease can be objectively related to an event occurring after the impairment was recognised.

### Write-off of loans

When it is considered certain that there is no realistic prospect of recovery and all collateral has been realised or transferred to the CSi group, the loan and any associated allowance is written off. Any repossessed collateral is initially measured at fair value. The subsequent measurement will depend on the nature of the collateral.

### Renegotiated loans

Where possible, the CSi group seeks to restructure loans rather than to take possession of collateral. This may involve extending the payment arrangements and the agreement of modified loan conditions. Once the terms have been renegotiated any impairment is measured using the effective interest rate as calculated before the modification of terms and the loan is no longer considered past due. Management continuously reviews renegotiated loans to ensure that all criteria are met and that future payments are likely to occur. The loans continue to be subject to an individual or collective impairment assessment, calculated using the loan's original effective interest rate.

### Loan commitments

Certain loan commitments are classified as financial assets/liabilities at fair value through profit or loss in accordance with the policy discussed in note j. All other loan commitments remain off-balance sheet. If such commitments are considered onerous, a provision is raised in accordance with IAS 37, "Provisions, Contingent Liabilities and Contingent Assets" (IAS 37) based upon management's best estimate of the expenditure required to settle the obligation.

### m) Netting

The CSi group only offsets financial assets and liabilities and presents the net amount on the Statement of Financial Position where it:

- currently has a legally enforceable right to set off the recognised amounts; and
- intends either to settle on a net basis, or to realise the asset and liability simultaneously.

In many instances the CSi group's net position on multiple transactions with the same counterparty is legally protected by Master Netting Agreements. Such agreements normally ensure that the net position is settled in the event of default of either counterparty and effectively limits credit risk on gross exposures. However, because such contracts are not currently enforceable in the normal course of business and the transactions themselves are not intended to be settled net, nor will they settle simultaneously, it is not permissible under IAS 32 Financial Instruments: Presentation (IAS32) to offset transactions falling under Master Netting Agreements.

### n) Income tax

Income tax recognised in the Statement of Income for the year comprises current and deferred taxes. Income tax is recognised in the Consolidated Statement of Income except to the extent that it relates to items recognised directly in equity, in which case the income tax is recognised in equity. For items initially recognised in equity and subsequently recognised in the Consolidated Statement of Income, the related income tax initially recognised in equity is also subsequently recognised in the Consolidated Statement of Income.

Current tax is the expected tax payable on the taxable income for the year and includes any adjustment to tax payable in respect of previous years. Current tax is calculated using tax rates enacted or substantively enacted at the reporting date.

For UK corporation tax purposes the CSi may surrender or claim certain losses from another UK group company. The surrendering company will be compensated in full for the value of the tax losses surrendered to the claimant company.

Deferred tax is provided using the Statement of Financial Position liability method, providing for temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and their tax-base. The amount of deferred tax provided is based on the amount at which it is expected to recover or settle the carrying amount of assets and liabilities on the Consolidated Statement of Financial Position, using tax rates that are expected to be applied to the temporary differences when they reverse, based on the laws that have been enacted or substantively enacted at the Consolidated Statement of Financial Position date.

Deferred tax is not recognised for the following temporary differences: the initial recognition of assets or liabilities in a transaction that is not a business combination and that affects neither accounting nor taxable profit or loss and differences relating to investments in subsidiaries and jointly controlled entities to the extent that it is probable that they will not reverse in the foreseeable future. In addition, deferred tax is not recognised for taxable temporary differences arising on the initial recognition of goodwill.

A deferred tax asset is recognised only to the extent that it is probable that future taxable profits will be available against which the asset can be utilised. Deferred tax assets are reduced to the extent that it is no longer probable that the related tax benefit will be realised. Tax assets and liabilities of the same type (current or deferred) are offset when they arise from the same tax reporting group, they relate to the same tax authority, the legal right to offset exists, and they are intended to be settled net or realised simultaneously.

Additional income taxes that arise from the distribution of dividends are recognised at the same time as the liability to pay the related dividend arises. Information as to the calculation of income tax recognised in Statement of Income for the periods presented is included in Note 12 Income Tax.

### Tax contingencies

Significant judgement is required in determining the effective tax rate and in evaluating certain tax positions. The CSi group may accrue for tax contingencies despite the belief that positions taken in tax returns are always fully supportable. Tax contingency accruals are adjusted due to changing facts and circumstances, such as case law, progress of tax authority audits or when an event occurs that requires a change to the tax contingency accruals. Management regularly assesses the appropriateness of provisions for income taxes. Management believes that it has appropriately accrued for any contingent tax liabilities.

### o) Investment property

Investment property is initially measured at cost, and subsequent to initial recognition is measured using the cost model.

Investment property held under the cost model is subsequently measured at cost less depreciation and any provision for impairment unless held for sale. If held for sale it will be subsequently measured at the lower of carrying amount and fair value less costs to sell.

On an annual basis an independent external valuer is engaged to assist in the determination of the fair value using recognised valuation techniques. Consideration is given to the specific nature of the properties to reflect their highest and best use including any appropriate business plan.

## p) Intangible assets

Intangible assets consist primarily of internally developed software. Expenditure on internally developed software is recognised as an asset when the CSi group is able to demonstrate its intention and ability to complete the development and use the software in a manner that will generate future economic benefits, and can reliably measure the costs to complete the development. The capitalised costs of internally developed software include all costs directly attributable to developing the software. Also included within intangible assets is the customer list which was acquired as part of the PFS ('Prime Fund Solutions') acquisition and the capitalised cost is the fair value at the date of acquisition.

Intangible assets are stated at cost less accumulated depreciation and impairment losses, and are depreciated over an estimated useful life of three years using the straight-line method upon completion, or utilisation for internally developed software and over an estimated useful life of thirteen years using the straight line method for the customer list. The amortisation of the intangible assets is included in the 'General and administrative expenses' in the Consolidated Statement of Income.

The carrying amounts of the CSi group's intangible assets are reviewed at each reporting date to determine whether there is any indication of impairment. If any such indication exists, then the asset's recoverable amount is estimated. The recoverable amount of an asset is the greater of its value in use and its fair value less costs to sell. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. An impairment loss is recognised if the carrying amount of an asset exceeds its estimated recoverable amount. Impairment losses are recognised in the Consolidated Statement of Income.

## q) Property and equipment

Property and equipment are stated at historical cost less accumulated depreciation and accumulated impairment losses. Historical cost includes expenditure that is directly attributable to the acquisition of the items.

Subsequent costs are included in the asset's carrying amount or are recognised as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the CSi group and the cost of the item can be reliably measured. All other repairs and maintenance are charged to the Consolidated Statement of Income during the financial period in which they are incurred. Depreciation on assets is calculated using the straight-line method to allocate their cost to their residual values over their maximum useful lives, as follows:

| | |
|---|---|
| Long leasehold buildings | 67 years |
| Leasehold improvements | 10 years |
| Computer equipment | 2-7 years |
| Office equipment | 5 years |

The carrying amounts of property and equipment are reviewed at each reporting date to determine whether there is any indication of impairment. An impairment charge is recorded in profit and loss to the extent the recoverable amount, which is the higher of fair value less costs to sell and value in use, is less than its carrying amount. Value in use is the present value of the future cash flows expected to be derived from the asset. After the recognition of impairment, the depreciation charge is adjusted in future periods to reflect the asset's revised carrying amount. The carrying amount of an asset for which an impairment loss has been recognised in prior years shall be increased to its recoverable amount only in a change of estimate in the asset's recoverable amount.

Gains and losses on disposals are determined by comparing proceeds with the carrying amount. These are included in the Consolidated Statement of Income.

### r) Preference share capital

The CSi group classifies preference shares in accordance with the substance of the contractual arrangement. Liabilities are defined as contractual obligations to deliver cash or another financial asset to another entity, or to exchange financial assets or financial liabilities with another entity under conditions that are potentially unfavourable to the entity.

A contract that evidences a residual interest in the assets of an entity after deducting all of its liabilities is in substance part of equity. Therefore, preference share capital issued by the CSi group is classified as equity if it is non-redeemable and all dividends are discretionary, or is redeemable but only at the CSi group's option. Dividends on preference share capital classified as equity are recognised as distributions within equity.

### s) Retirement benefit costs

The CSi group has both defined contribution and defined benefit pension plans. The defined benefit plans are CS group schemes, in which the Bank is not the sponsoring entity. Obligations for contributions to defined contribution pension plans are recognised as an expense in the Consolidated Statement of Income as incurred.

In accordance with the provisions of IAS 19, "Employee Benefits" (IAS 19) for defined benefit plans that share risks between various entities under common control, no retirement benefit obligation is recognised in the Statement of Financial Positions of the Bank and defined contribution accounting is applied, as the CSi group has no contractual agreement or stated policy for incurring any charges by the sponsoring employer for the net defined benefit cost. The CSi group's share of the retirement benefit obligation is instead recognised in the Statement of Financial Position of the sponsoring entity, Credit Suisse Securities (Europe) Limited ('CSSEL'), which is external to the CSi group but is a related party due to both entities being owned by CSG.

### t) Deposits

Deposits are funds held from customers (both retail and commercial) and banks, generally for the cash safekeeping and/or liquidity needs of those customers. The amount booked to the balance sheet positions represents the nominal values of the deposits less any unearned discounts or nominal value plus any unamortised premiums. Subsequent measurement is at amortised cost.

### u) Long term debt

Debt issued by the CSi group is initially measured at fair value, which is the fair value of the consideration received, net of transaction costs incurred. Subsequent measurement is at amortised cost, using the effective interest method to amortise cost at inception to the redemption value over the life of the debt. Csi group's long-term debt also includes instruments with embedded derivative features which are substantially all accounted for at fair value.

#### Debt with embedded derivatives

The CSi group issues long term debt containing embedded derivatives, most of which have been designated as financial liabilities at fair value through profit or loss. For more information on the criteria that must be met to designate a financial instrument at fair value please refer to the previous section of this disclosure with the same name. Both the host instrument and embedded derivative in these structured notes are remeasured at each reporting period with changes in fair value being reported in 'Net gains/ (losses) from financial assets/liabilities at fair value through profit or loss' in the Consolidated Statement of Income.

### v) Contingent liabilities

Contingent liabilities are possible obligations that arise from past events, and whose existence will be confirmed only by the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the entity, or are present obligations where it is not probable that an outflow of resources embodying economic benefits will be required to settle the obligation or the amount of the obligation, cannot be measured with sufficient reliability. A contingent liability is not recognised as a liability but is disclosed, unless the possibility is remote, except for those acquired under business combinations, which are recognised at fair value.

### w) Provisions

Provisions are recognised for present obligations as a result of past events which can be reliably measured, where it is probable that an outflow of resources embodying economic benefits will be required to settle the obligations. The amount recognised as a provision is the best estimate of the consideration required to settle the present obligation as of the Consolidated Statement of Financial Position date, taking into account the risks and uncertainties surrounding the obligation. The expense recognised when provisions are established is recorded in 'General and administrative expenses' on the Consolidated Statement of Income. Provisions for loan losses are recorded in 'Provision for credit losses' in the Consolidated Statement of Income.

### x) Share-based payments

The CSi group accounts for share based transactions with its employees as cash-settled share based payment transactions, as the CSi group has the legal obligation to settle the arrangement by delivering an asset that is not an equity instrument of the CSi group. This entails the recognition of a liability, incurred and related to share-based payments, over the service period and in proportion to the service delivered at fair value. If the employee is eligible for normal or early retirement, the award is expensed over that shorter required service period and if an award consists of individual tranches that vest in instalments (i.e. graded vesting), each tranche of the award is expensed separately over its individual service period. The fair value of the liability is remeasured until the liability is settled and the changes in fair value are recognised in the Consolidated Statement of Income.

### y) Other compensation plans

The CSi group has other deferred compensation plans which can be in the form of fixed or variable deferred cash compensation. The expense for these awards is recognised over the service period, which is the period the employee is obligated to work in order to become entitled to the cash compensation. Fixed deferred cash compensation is generally awarded in the form of sign-on bonuses and employee forgivable loans. Variable deferred cash compensations are awards where the final cash payout is determined by the performance of certain assets, a division or the CS group as a whole. The awards are expensed over the required service period and accruals are adjusted for changes to the expected final payout

### z) Interest income and expense

Interest income and expense includes interest income and expense on the CSi group's financial instruments owned and financial instruments sold not yet purchased, short-term and long-term borrowings, reverse repurchase and repurchase agreements and securities borrowed and securities lending transactions. Interest income and expense does not include interest flows on the CSi group's trading derivatives (except for hedging relationships) and certain financial instruments classified as at fair value through profit or loss. Interest income and expense is accrued, and any related net deferred premiums, discounts, origination fees or costs are amortised as an adjustment to the yield over the life of the related asset or liability.

### aa) Financial guarantee contracts

Financial guarantee contracts require the issuer to make specified payments to reimburse the holder for a loss it incurs because a specified debtor fails to make payments when due in accordance with the terms of a debt instrument. Such financial guarantee contracts are given to banks, financial institutions and other parties on behalf of customers to secure loans, overdrafts and other payables.

Financial guarantee contracts are initially recognised in the Consolidated Financial Statements at fair value on the date the guarantee was given, which is generally the fee received or receivable. Subsequent to initial recognition, the CSi group's liabilities under such guarantees are measured at the higher of the initial fair value, less cumulative amortisation, and the best estimate for the expenditure required to settle any financial obligation arising as of the Statement of Financial Position date when it is probable that the financial obligation will occur. These estimates are determined based on experience with similar transactions and history of past losses, and management's determination of the best estimate.

Any increase in the liability related to financial guarantee contracts is recorded in the Consolidated Statement of Income under 'Provision for credit losses'.

### ab) Commissions and fees

When the outcome of a transaction involving the rendering of services can be estimated reliably, revenue associated with the transaction is recognised by reference to the stage of completion of the transaction at the reporting date. The outcome of a transaction can be estimated reliably when all the following conditions are satisfied:

i) The amount of revenue can be measured reliably;

ii) It is probable that the economic benefits associated with the transaction will flow to the entity;

iii) The stage of completion of the transaction at the reporting date can be measured reliably; and

iv) The costs incurred for the transaction and the costs to complete the transaction can be measured reliably.

Fee revenue is recognised from a diverse range of services provided to its customers. Fee income is accounted for as follows:

- Income earned on the execution of a significant act is recognised as revenue when the act is completed (for example, fees arising from negotiating, or participating in the negotiation of, a transaction for a third party, such as fees from mergers and acquisitions and other corporate finance advisory services);
- Income earned from the provision of services is recognised as revenue as the services are provided (for example, portfolio management, granting of loan commitments where it is probable that the CSi group will enter into a specific lending arrangement, customer trading and custody services ); and
- Income which forms an integral part of the effective interest rate of a financial instrument is recognised as an adjustment to the effective interest rate (for example, certain loan commitment fees where it is probable that the CSi group will enter into a specific lending agreement) and recorded in 'Interest income'.
- Performance-linked fees or fee components are recognised when the recognition criteria are fulfilled

Incremental costs that are directly attributable to securing investment management contracts may be deferred to match the revenue recognised in relation to that transaction. These costs are recognised as the CSi group recognises the related revenue.

### ac) Operating leases

The leases entered into by the CSi group are exclusively operating leases. The total payments made under operating leases are charged to the Consolidated Statement of Income on a straight-line basis over the period of the lease. When an operating lease is terminated before the lease period has expired, any early termination payment required to be made to the lessor is recognised as an expense in the period in which termination takes place. For lease incentive provided by the lessor, the CSi group, as lessee, recognises the aggregate benefit as a reduction of rental expense over the lease term on a straight-line basis.

If the CSi group is the lessor in an operating lease it continues to present the asset subject to the lease in its financial statements and recognises lease income on a straight-line basis over the period of the lease.

### Subleases

The subleases entered into by the CSi group are exclusively operating leases. Sublease payments received are recognised through the Consolidated Statement of Income.

### ad) Dividends

Dividends on ordinary shares are recognised as a liability and deducted from equity when declared.

### ae) Noncontrolling interest

Noncontrolling interest is equity in subsidiaries not attributable, directly or indirectly, to the CSi group. The CSi group presents noncontrolling interest in equity. However, if the holders of noncontrolling interest have the right to put the shares to CSi or one of its subsidiaries the instrument may meet the definition of a liability and is presented as such in the consolidated financial statements of the CSi group.

## 3. Critical Accounting Estimates and Judgements in Applying Accounting Policies

In order to prepare the Consolidated Financial Statements in accordance with IFRS, management is required to make certain accounting estimates to ascertain the value of assets and liabilities. These estimates are based upon judgement and the information available at the time, and actual results may differ materially from these estimates. Management believes that the estimates and assumptions used in the preparation of the Consolidated Financial Statements are prudent, reasonable and consistently applied.

For further information on significant accounting judgements and estimates refer to Note 2 – Significant Accounting Policies, specifically the following:

i) Derivative financial instruments and hedging

j) Financial assets and liabilities at fair value through profit or loss

k) Recognition and derecognition

l) Other loans and receivables

n) Income tax

s) Retirement benefit costs

v) Contingent liabilities

w) Provisions

x) Share-based payments

Management believes that the critical accounting estimates discussed below involve the most significant judgements and assessments. Use of available information and application of judgement are inherent in the formation of estimates. Actual results in the future could differ from such estimates and the differences may be material to the Consolidated Financial Statements.

### Fair Value

A significant portion of the CSi group's financial instruments (trading financial assets and liabilities, derivative instruments and financial assets and liabilities designated at fair value) are carried at fair value in the Consolidated Statement of Financial Position. Related changes in the fair value are recognised in the Consolidated Statement of Income. Deterioration of financial markets could significantly impact the fair value of these financial instruments and the results of operations.

The fair value of the majority of the CSi group's financial instruments is based on quoted prices in active markets or observable inputs. These instruments include government and agency securities, certain commercial papers ('CP'), most investment grade corporate debt, certain high grade debt securities, exchange-traded and certain over the counter ('OTC') derivative instruments and most listed equity securities.

In addition, the CSi group holds financial instruments for which no prices are available and which have little or no observable inputs. For these instruments, the determination of fair value requires subjective assessment and judgement depending on liquidity, pricing assumptions, the current economic and competitive environment and the risks affecting the specific instrument. In such circumstances, valuation is determined based on management's own judgements about the assumptions that market participants would use in pricing the asset or liability, including assumptions about risk. These instruments include certain OTC derivatives, including equity and credit derivatives, certain corporate equity-linked securities, mortgage-related and Collateralised Debt Obligations ('CDO's'), securities, private equity investments, certain loans and credit products, (including leveraged finance, certain syndicated loans and certain high yield bonds).

The fair value of financial assets and liabilities is impacted by factors such as benchmark interest rates, prices of financial instruments issued by third parties, commodity prices, foreign exchange rates and index prices or rates. In addition, valuation adjustments are an integral part of the valuation process when market prices are not indicative of the credit quality of a counterparty, and are applied to both OTC derivatives and debt instruments.

The impact of changes in a counterparty's credit spreads (known as credit valuation adjustments or CVA) is considered when measuring the fair value of assets and the impact of changes in the CSi group's own credit spreads (known as debit valuation adjustments or DVA) is considered when measuring the fair value of its liabilities.

For OTC derivatives, the impact of changes in both the CSi group's and the counterparty's credit standing is considered when measuring their fair value, based on current CDS prices. The adjustments also take into account contractual factors designed to reduce the CSi group's credit exposure to a counterparty, such as collateral held and master netting agreements.

For hybrid debt instruments with embedded derivative features, the impact of changes in the CSi group's credit standing is considered when measuring their fair value, based on current funded debt spreads.

As of the end of 2013, 81.3% and 82.1% of CSi group's total assets and total liabilities respectively, were measured at fair value (2012: 83.3% and 83.2%, respectively). Level 3 assets were USD 12.5 billion as of the end of 2013 (2012: USD 12.6 billion). As of the end of 2013, these assets comprised 2.45% of total assets (2012: 1.82%) and 2.34% of total assets measured at fair value (2012: 2.18%).

For further information on the fair value hierarchy and a description of CSi group's valuation techniques, refer to Note 36 – Financial Instruments.

The CSi group does not recognise a dealer profit or unrealised gains or losses at the inception of a derivative or non-derivative transaction unless the valuation underlying the unrealised gains or losses is evidenced by quoted market prices in an active market, observable prices of other current market transactions, or other observable data supporting a valuation technique in accordance with IAS 39 AG 76. The financial instrument is recognised at the transaction price and any profit implied from the valuation technique at trade date is deferred over the life of the contract or when the fair value is expected to become observable.

Control processes are applied to ensure that the fair value of the financial instruments reported in the Bank and CSi group Financial Statements, including those derived from pricing models, are appropriate and determined on a reasonable basis. For further information related to the CSi group's control and governance processes on the fair value of financial instruments please refer Note 36 Financial Instruments.

### Special Purpose Entities

As part of normal business, CSi group engages in various transactions that include entities which are considered Special Purpose Entities ('SPEs'). An SPE is an entity which is created to accomplish a narrow and well defined objective, often created with legal arrangements that impose strict and sometimes permanent limits on the decision making powers of their governing board, trustee or management. Such entities are required to be assessed for consolidation under IAS 27 "Consolidated and separate financial instruments" and its interpretation, SIC-12 "Consolidation-Special Purpose Entities".

Transactions with SPEs are generally executed to facilitate securitisation activities or to meet specific client needs, such as providing liquidity or investment opportunities, and, as part of these activities, the CSi group may hold interests in the SPEs. Securitisation-related transactions with SPEs involve selling or purchasing assets and entering into related derivatives with those SPEs, providing liquidity, credit or other support. Other transactions with SPEs include derivative transactions in the CSi group's capacity as the prime broker for entities qualifying as SPEs. The CSi group also enters into lending arrangements with SPEs for the purpose of financing client projects or the acquisition of assets. Further, the CSi group is involved with SPEs which were formed for the purpose of offering alternative investment solutions to clients. Such SPEs relate primarily to fund-linked vehicles or fund of funds, where the CSi group acts as structurer, manager, distributor, broker, market maker or liquidity provider.

An SPE is consolidated by the CSi group when the substance of the relationship between the CSi group and the SPE indicates that the SPE is controlled by a CSi group company. In assessing control, all relevant factors are considered, including qualitative and quantitative factors for example:

Qualitative factors:

(a) In substance, the activities of the SPE are being conducted on behalf of the CSi group according to its specific business needs so that the CSi group obtains benefits from the SPEs operation;

(b) In substance, the CSi group has the decision-making powers to obtain the majority of the benefits of the activities of the SPE or, by setting up an 'autopilot' mechanism, the CSi group has delegated these decision-making powers;

Quantitative factors:

(c) In substance, the CSi group has rights to obtain the majority of the benefits of the SPE and therefore may be exposed to risks incident to the activities of the SPE; or

(d) In substance, the CSi group retains the majority of the residual or ownership risks related to the SPE or its assets in order to obtain benefits from its activities.

Quantitative factors are also known as the majority of the risks and rewards of ownership.

In the majority of cases, these SPEs are accounted for off-balance sheet under IFRS where the CSi group does not have the majority of the risks and rewards of ownership of the SPE.

SPEs may be sponsored by the CSi group, unrelated third parties or clients. Significant management judgement may be required both initially to apply the consolidation accounting requirements and thereafter, if certain events occur that require the CSi group to reassess whether consolidation is required.

### Contingencies and loss provisions

According to IAS 37 "Provisions, Contingent Liabilities and Contingent Assets", a provision shall be recognised when:

(a) an entity has a present obligation (legal or constructive) as a result of a past event;

(b) it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation; and

(c) a reliable estimate can be made of the amount of the obligation.

A contingency is an existing condition that involves a degree of uncertainty that will ultimately be resolved upon the occurrence of future events

### Litigation contingencies

The CSi group is involved in a variety of legal, regulatory and arbitration matters in connection with the conduct of its businesses.

It is inherently difficult to predict the outcome of many of these matters, particularly those cases in which the matters are brought on behalf of various classes of claimants, which seek damages of unspecified or indeterminate amounts or which involve questionable legal claims. In presenting the Consolidated Financial Statements, management makes estimates regarding the outcome of legal, regulatory and arbitration matters and takes a charge to income when losses with respect to such matters are probable and can be reasonably estimated. Charges are not established for matters when losses cannot be reasonably estimated. Estimates, by their nature, are based on judgement and currently available information and involve a variety of factors, including but not limited to the type and nature of the litigation, claim or proceeding, the progress of the matter, the advice of legal counsel and other advisers, the CSi group's defences and its experience in similar cases or proceedings, as well as the CSi group's assessment of matters, including settlements, involving other defendants in similar or related cases or proceedings.

### Allowances and impairment losses on other loans and receivables

As a normal part of its business, the CSi group is exposed to credit risks through its lending relationships, commitments and letters of credit and as a result of counterparty risk on derivatives, foreign exchange and other transactions. Credit risk is the risk that a borrower or counterparty is unable to meet its financial obligations. In the event of a default, the CSi group generally incurs a loss equal to the amount owed by the counterparty, less a recovery amount resulting from foreclosure, liquidation of collateral or restructuring of the counterparty's obligation. The CSi group maintains allowances for loan losses which are considered adequate to absorb credit losses existing at the reporting date. These allowances are for incurred credit losses inherent in existing exposures and credit exposures specifically identified as impaired. The inherent loss allowance is for all credit exposures not specifically identified as impaired which, on a portfolio basis, are considered to contain incurred inherent losses. Loans are segregated by risk, industry or country rating in order to collectively estimate inherent losses. The loan valuation allowance for inherent loss is established by analysing historical and current default probabilities, historical recovery assumptions and internal risk ratings. The methodology for calculating specific allowances involves judgements at many levels, such as early identification of deteriorating credits. Extensive judgement is required in order to properly evaluate the various indicators of financial condition of a counterparty and likelihood of repayment.

The CSi group performs an in-depth review and analysis of impaired loans, considering factors such as recovery and exit options as well as considering collateral and counterparty risk. In general, all impaired loans are individually assessed. Corporate & institutional loans are reviewed at least annually based on the borrower's financial statements and any indications of difficulties they may experience. Loans that are not impaired, but which are of special concern due to changes in covenants, downgrades, negative financial news and other adverse developments, are included on a watch list. All loans on the watch list are reviewed at least quarterly to determine whether they should be moved to CSi group recovery management at which point they are reviewed quarterly for impairment. If an individual loan specifically identified for evaluation is considered impaired, the allowance is determined as a reasonable estimate of credit losses existing as of the end of the reporting period. Thereafter, the allowance is revalued by CSi group credit risk management at least annually or more frequently depending on the risk profile of the borrower or credit relevant events.

### Retirement Benefit Costs

The CSi group has both defined contribution and defined benefit pension plans. The defined benefit plans are CS group schemes, CSi being a participant to the scheme and Credit Suisse Securities (Europe) Limited ('CSSEL'), a related party also owned by the CSG, as the sponsor. The CSi group's share of the retirement benefit obligation, main estimates and judgements lie with CSSEL which are described below:

The following relates to the assumptions CSSEL, the sponsor of the defined benefit plan, has made in arriving at the valuations of the various components of the defined benefit plan, of which the CSi group is a participant.

The calculation of the expense and liability associated with the defined benefit pension plans requires the use of assumptions, which include the discount rate and rate of future compensation increases as determined by CSSEL. Management determines these assumptions based upon currently available market and industry data and the historical performance of the plans and their assets. Management also consults with an independent actuarial firm to assist in selecting appropriate assumptions and valuing its related liabilities. The actuarial assumptions used by CSSEL may differ materially from actual results due to changing market and economic conditions, higher or lower withdrawal rates or longer or shorter life spans of the participants. Any such differences could have a significant impact on the amount of pension expense recorded in future years.

The discount rate used in determining the benefit obligation is based upon either high quality corporate bond rates or government bonds. In estimating the discount rate, CSSEL takes into consideration the relationship between the corporate bonds and the timing and amount of the future cash outflows on its benefit payments.

### Taxes

### Tax contingencies

Significant judgement is required in determining the effective tax rate and in evaluating certain tax positions. The CSi group may accrue for tax contingencies despite the belief that positions taken in tax returns are always fully supportable. Tax contingency accruals are adjusted due to changing facts and circumstances, such as case law, progress of tax authority audits or when an event occurs that requires a change to the tax contingency accruals. Management regularly assesses the appropriateness of provisions for income taxes. Management believes that it has appropriately accrued for any contingent tax liabilities.

### Deferred tax valuation

Deferred tax assets ('DTA') and deferred tax liabilities ('DTL') are recognised for the estimated future tax effects of operating loss carry-forwards and temporary differences between the carrying amounts of existing assets and liabilities and their respective tax bases at the statement of financial position date. The realisation of deferred tax assets on temporary differences is dependent upon the generation of taxable income in future accounting periods after those temporary differences become deductible. The realisation of deferred tax assets on net operating losses is dependent upon the generation of future taxable income. Management regularly evaluates whether deferred tax assets can be realised. Only if management considers it probable that a deferred tax asset will be realised and is a corresponding deferred tax assets established without impairment.

In evaluating whether deferred tax assets can be realised, management considers both positive and negative evidence, including projected future taxable income, the scheduled reversal of deferred tax liabilities and tax planning strategies. This evaluation requires significant management judgement, primarily with respect to projected taxable income, also taking into account the history of recent losses of the Bank (primarily arising from the financial crisis that started in late 2008 and thereafter). The future taxable income can never be predicted with certainty, but management also evaluated the factors contributing to the losses and considered whether or not they are temporary or indicate an expected permanent decline in earnings. The evaluation is derived from budgets and strategic business plans but is dependent on numerous factors, some of which are beyond management's control, such as the fiscal and regulatory environment and external economic growth conditions. Substantial variance of actual results from estimated future taxable profits, or changes in CSi group's estimate of future taxable profits and potential restructurings, could lead to changes in the amount of deferred tax assets that are realisable, or considered realisable, and would require a corresponding adjustment to the level of recognised DTA.

### Share-based payments

The CSi group uses the liability method to account for its share-based payment plans, which requires the CSi group's obligation under these plans to be recorded at its current estimated fair value. Share awards and share unit awards that contain market conditions are marked-to-market based on the latest share price information reflecting the terms of the award. Share unit awards that contain earnings performance conditions are marked-to-market based on CSG's actual earnings performance to date and CSG's internal earnings projections over the remaining vesting period of the award. In determining the final liability, CSG also estimates the number of forfeitures over the life of the plan based on management's expectations for future periods, which also considers past experience.

### Transfer Pricing

Tax transfer pricing charges are determined based on arm's length pricing principles. These net charges are adjusted as required due to evolving facts and changes in tax laws, progress of tax authority audits as well as tax authority negotiated arrangements for current and prior periods. Management continuously assess these factors and make adjustments as required.

## 4. Segmental Analysis

The Bank has concluded that there are three reportable segments that are regularly reviewed by the Chief Operating Decision Maker ('CODM') when assessing the performance and allocation of resources. These segments are based on products and services offered by CSi group:

| | |
|---|---|
| Fixed Income: | The fixed income division (FID) operates in rates, foreign exchange, credit, structured products trading, emerging markets, and commodities markets. The operations also include ongoing management and wind-down of legacy businesses in CDOs, RMBS origination, CMBS and Commodities. The product suite covers both cash and OTC derivatives including government bonds, corporate bonds, treasury bills, interest rate swaps, credit-default swaps, foreign exchange options, total return swaps, and listed options across product classes. |
| Equities: | The activities of the equities division include sales, trading, financing, prime brokerage services and market-making in global equity and equity-related securities, options, futures, risk management and hedging products. Activities cover both exchange-traded and over-the counter traded securities, including American Depositary Receipts, restricted stocks, equity repurchases, block trade executions, program trading executions, equity derivatives and convertible securities. |
| Investment banking: | The investment banking division (IBD) service offering includes mergers and acquisitions, debt, equity and other capital raising activities. |

Segment performance is assessed by the Board based on the Monthly Board Summary report, which details revenues by segment. CSi assets and liabilities are not managed by segment. Expenses are managed as part of the wider CS group management processes and therefore, while the CODM does assess the overall expense base for CSi, it does not manage the expenses at a CSi segment level.

Similarly certain revenue items are not directly allocated to the above business segments at a CSi Bank level. These items include transfer pricing, certain credit risk allocations, treasury and corporate centre allocations. These are not included as an operating segment as they are not separate business activities from which CSi may earn revenues.

Transactions between reportable segments are held at an arm's length basis and are included in the segment result.

The following table shows the external revenue of each operating segment during the year:

| | 2013 | 2012 |
|---|---|---|
| **Revenues (USD million)** | | |
| Fixed income | 1,495 | 1,825 |
| Equities | 873 | 814 |
| Investment banking | 166 | 202 |
| **Total revenues** | **2,534** | **2,841** |

The following table shows the CSi group's revenue by the region which generates the revenue:

| | 2013 | 2012 |
|---|---|---|
| **Revenues (USD million)** | | |
| EMEA[1] | 1,575 | 2,033 |
| America | 421 | 673 |
| Switzerland | - | (16) |
| Asia | 538 | 151 |
| **Total revenues** | **2,534** | **2,841** |

[1] EMEA is defined as Europe, Middle East and Africa excluding Switzerland and Luxembourg.

### CSi Group Assets:

Non-current assets, other than financial instruments, deferred tax assets, post-employment benefit assets and rights arising under insurance contracts, consist of property and equipment, investment property and intangible assets totaling USD 1,124 million (2012: USD 1,248 million), all of which are located in EMEA.

### Reconciliation of reportable segment revenues

| | 2013 | 2012 |
|---|---|---|
| **IFRS statement of income (USD million)** | | |
| Total revenues for reportable segments | 2,534 | 2,841 |
| Revenue sharing agreements | (506) | (734) |
| Treasury funding | (448) | (662) |
| Other corporate items[1] | (159) | (277) |
| CS group to primary reporting reconciliations[2] | 148 | 134 |
| **Net Revenues** | **1,569** | **1,302** |

1 Significant items being fair value changes in issued structured notes due to changes in the CSi group's own creditworthiness.

2 This is the difference between the monthly board summaries which are prepared on a US GAAP basis and the CSi accounts prepared in accordance with IFRS. In 2013 includes the release of a USD 104 million valuation adjustment in relation to trades where the CSi group is a market maker following the adoption of IFRS 13 (Note 2- Significant accounting policy).

The CSi group is not reliant on any single customer for its revenue generation.

## 5. Net Interest Expense

| Group | 2013 | 2012 |
|---|---|---|
| **Net interest expense (USD million)** | | |
| Other loans and receivables | 450 | 572 |
| Securities purchased under resale agreements and securities borrowing transactions | 121 | 162 |
| Cash collateral paid on OTC derivatives transactions | 66 | 142 |
| Interest income on cash, cash equivalents and loans | 133 | 201 |
| **Interest income** | **770** | **1,077** |
| Deposits | (11) | (4) |
| Short term borrowings | (274) | (426) |
| Securities sold under repurchase agreements and securities lending transactions | (81) | (88) |
| Long term debt | (406) | (585) |
| Cash collateral received on OTC derivatives transactions | (77) | (145) |
| **Interest expense** | **(849)** | **(1,248)** |
| **Net interest expense** | **(79)** | **(171)** |

Interest income accrued on impaired financial assets during the year was USD 0.08 million (2012: USD 5 million).

## 6. Commissions and Fees Income

| Group | 2013 | 2012 |
|---|---|---|
| **Commission and fees income (USD million)** | | |
| Lending business | 193 | 173 |
| Other customer services | (138) | (171) |
| **Net commission and fee income** | **55** | **2** |
| | | |
| Total commission and fee income | 193 | 173 |
| Total commission and fee expense | (138) | (171) |
| **Net commission and fee income** | **55** | **2** |

## 7. Release of provision for Credit Losses

| Group | 2013 | 2012 |
|---|---|---|
| **Release of provision for credit losses (USD million)** | | |
| Allowance for loan losses | 7 | 39 |
| Provisions for off-balance sheet exposure | - | 5 |
| **Release of provision for credit losses** | **7** | **44** |

## 8. Net Gains From Financial Assets/Liabilities At Fair Value Through Profit or Loss

| Group | 2013 | 2012 |
|---|---|---|
| **Net gains from financial assets/liabilities at fair value through profit or loss (USD million)** | | |
| Interest rate | 875 | 4,797 |
| Foreign exchange | 1,181 | (795) |
| Equity | (337) | (333) |
| Commodity | 709 | 43 |
| Credit | (330) | (1,608) |
| Other | (44) | 68 |
| **Total net gains from financial assets/liabilities at fair value through profit or loss** | **2,054** | **2,172** |

Of which:

| Net gains/(losses) from financial assets/liabilities designated at fair value through profit or loss (USD) | 2013 | 2012 |
|---|---|---|
| Securities purchased under resale agreements and securities borrowing transactions | (65) | 12 |
| Loans | 253 | (489) |
| Other financial assets designated at fair value through profit or loss | 190 | (56) |
| Securities sold under repurchase agreements and securities lending transactions | 43 | 64 |
| Short term borrowings | 155 | (644) |
| Long term debt | (725) | (2,941) |
| Other financial liabilities designated at fair value through profit or loss | 55 | 122 |
| **Total net (losses) from financial assets/liabilities designated at fair value through profit or loss** | **(94)** | **(3,932)** |

Included in this total is USD 124 million loss (2012: USD 259 million loss) of fair value changes of financial liabilities due to changes in the CSi group's own creditworthiness (Structured Notes and Subordinated Debt, included in Long term debt and Short term borrowings above). The cumulative effect thereon is a gain of USD 18 million (2012: gain USD 141 million).

## 9. Other Revenues

| Group | 2013 | 2012 |
|---|---|---|
| **Other revenues (USD million)** | | |
| Revenue sharing agreement expense | (506) | (734) |
| Other | 38 | (11) |
| **Other revenues** | **(468)** | **(745)** |

The revenue sharing agreement expense principally relates to amounts allocated to CSi from other companies in the CS group under transfer pricing policies.

## 10. Compensation and Benefits

| Group | 2013 | 2012 |
|---|---|---|
| **Compensation and benefits (USD million)** | | |
| Salaries and variable compensation | (366) | (368) |
| Social security | (46) | (43) |
| Pensions | (13) | (22) |
| Other | (4) | (4) |
| **Compensation and benefits** | **(429)** | **(437)** |

Included in the above table are amounts relating to Directors' remuneration. Further details are disclosed in Note 31 – Related Parties. Staff costs and staff numbers do not differ between Bank and CSi group.

## 11. General and Administrative Expenses

| Group | | 2013 | 2012 |
|---|---|---|---|
| **General and administrative expenses (USD million)** | | | |
| Occupancy expenses | | (11) | (3) |
| Amortisation expenses | 23 | (174) | (149) |
| Depreciation expenses | 22 | (66) | (69) |
| Depreciation for real estate | 18 | (11) | (7) |
| Impairment of investment property | | (51) | (14) |
| Litigation | 26 | 2 | (1) |
| Brokerage charges and clearing house fees | | (319) | (298) |
| Auditor's remuneration | | (2) | (3) |
| Professional services | | (36) | (24) |
| Impairment of intangible assets | 23 | (15) | (2) |
| CSG trademark | | (17) | (21) |

| | | |
|---|---|---|
| Net overheads allocated from other CS group entities | (385) | (532) |
| UK bank levy | (57) | (38) |
| Marketing data , publicity and subscription | (18) | (21) |
| Non income taxes | (16) | (15) |
| Other | (23) | (27) |
| **General and administrative expenses** | **(1,199)** | **(1,224)** |

The expenses incurred by other CS group company under common control are recharged to CSi group through 'Net overheads allocated from other CS group entities'. The recharges comprise of compensation and benefit expenses and general administrative expenses.

**Auditor's remuneration**

Auditor's remuneration in relation to the statutory audit amounted to USD 2.2 million (2012: USD 2.9 million). The following fees were payable by the CSi group to the auditor, KPMG Audit Plc.

| | **2013 USD'000** | **2012 USD'000** |
|---|---|---|
| **CSi Auditor's remuneration** | | |
| Fees payable to the Bank's auditor for the audit of the Bank's annual accounts | 1,936 | 1,894 |
| Fees payable to the CSi group's auditor and its associates for other services: | | |
| Audit-related assurance services | 289 | 127 |
| Other assurance services | 41 | 970 |
| **Total** | **2,266** | **2,991** |

## 12. Income Tax

| | **Group** | | **Bank** | |
|---|---|---|---|---|
| | **2013** | **2012** | **2013** | **2012** |
| **Current and deferred taxes (USD million)** | | | | |
| **Current tax** | | | | |
| Current expense on profits | (2) | (3) | (2) | (3) |
| Adjustments in respect of previous periods | - | 13 | - | 13 |
| Adjustments in respect of APA | - | 10 | - | 10 |
| **Current income tax benefit** | **(2)** | **20** | **(2)** | **20** |
| **Deferred tax** | | | | |
| Origination and reversal of temporary differences | 73 | 101 | 73 | 101 |
| Current year tax losses | (51) | (18) | (51) | (18) |
| Impairment of deferred tax asset | (319) | - | (319) | - |
| Adjustments in respect of APA | - | (335) | | (335) |
| Adjustments in respect of previous periods | 6 | (2) | 6 | (2) |
| Effect of changes in tax rate or the imposition of new taxes | (187) | (139) | (187) | (139) |
| **Deferred income tax expense** | **(478)** | **(393)** | **(478)** | **(393)** |
| **Income tax expense** | **(480)** | **(373)** | **(480)** | **(373)** |

The UK corporation tax rate reduced from 24% to 23% with effect from 1 April 2013. Furthermore, the UK corporation tax rate will reduce from 23% to 21% with effect from 1 April 2014 and from 21% to 20% with effect from 1 April 2015.

Further information about deferred income tax is presented in Note 13 – Deferred Taxes. The income tax expense for the year can be reconciled to the loss per the statement of income as follows:

### Reconciliation of taxes computed at the UK statutory rate

| | Group | | Bank | |
|---|---|---|---|---|
| | **2013** | **2012** | **2013** | **2012** |
| **Reconciliation of taxes computed at the UK statutory rate (USD million)** | | | | |
| Loss before tax | (59) | (359) | (57) | (319) |
| Income tax expense computed at the statutory rate of 23.25% (2012: 24.5%) | 14 | 88 | 14 | 79 |
| Increase/(decrease) in income taxes resulting from: | | | | |
| Other permanent differences | 8 | (5) | 8 | 4 |
| Effect of different tax rates of operations/subsidiaries operating in other jurisdictions | (2) | (3) | (2) | (3) |
| Adjustments to current tax in respect of previous periods | - | 13 | - | 13 |
| Impairment of deferred tax asset | (319) | - | (319) | - |
| Adjustments in respect of APA | - | (325) | | (325) |
| Adjustments to deferred tax in respect of previous periods | 6 | (2) | 6 | (2) |
| Effect on deferred tax resulting from changes to tax rates | (187) | (139) | (187) | (139) |
| **Income tax expense** | **(480)** | **(373)** | **(480)** | **(373)** |

## 13. Deferred Taxes

Deferred taxes are calculated on all temporary differences under the liability method using an effective tax rate of 20% (2012: 23%)

On 21 March 2012 the UK Government announced that the UK corporation tax rate applicable from 1 April 2013 would be 23%. This was substantively enacted on 3 July 2012.

The Finance Act 2013, which passed into law on 17 July 2013, included further rate reductions in the UK corporation tax rate from 23% to 21% with effect from 1 April 2014 and 21% to 20% with effect 1 April 2015.

The changes in the UK corporation tax rate from 23% to 21% and from 21% to 20% has resulted in a reduction of the CSi's group net deferred tax asset as at 31 December 2013 of USD 187 million.

### Deferred tax assets

Deferred tax assets and liabilities are attributable to the following items:

| | Group | | Bank | |
|---|---|---|---|---|
| | **2013** | **2012** | **2013** | **2012** |
| **Components of net deferred tax assets (USD million)** | | | | |
| Derivative financial instruments | 7 | 12 | 7 | 12 |
| Share-based compensation | 29 | 24 | 29 | 24 |
| Decelerated tax depreciation | 134 | 139 | 134 | 139 |
| Other provisions | 70 | 80 | 70 | 80 |
| Unpaid interest | 348 | 345 | 348 | 345 |
| Deferred tax impact on losses carried forward | 385 | 850 | 385 | 850 |
| **At end of the year** | **973** | **1,450** | **973** | **1,450** |

### Details of the tax effect of temporary differences

The deferred tax expense in the Statement of Income comprises the following temporary differences:

| | Group | | Bank | |
|---|---|---|---|---|
| | **2013** | **2012** | **2013** | **2012** |
| **Tax effect of temporary differences (USD million)** | | | | |
| Derivative financial instruments | (5) | (6) | (5) | (6) |
| Share-based compensation | 6 | (1) | 6 | (1) |
| Decelerated tax depreciation | (5) | (6) | (5) | (6) |
| Other provisions | (10) | (13) | (10) | (13) |
| Unpaid interest | 3 | 30 | 3 | 30 |
| Deferred tax impact on losses carried forward | (467) | (397) | (467) | (397) |
| **Total deferred tax (expense)/benefit in the statement of income** | **(478)** | **(393)** | **(478)** | **(393)** |

Deferred tax assets ('DTA') and liabilities are recognised for the estimated future tax effects of operating loss carry-forwards and temporary differences between the carrying amounts of existing assets and liabilities and their respective tax bases at the Statement of Financial Position date. The realisation of DTA on temporary differences is dependent upon the generation of taxable income in future accounting periods after those temporary differences become deductible. The realisation of DTA on net operating losses is dependent upon the generation of future taxable income. Management regularly evaluates whether DTA can be realised and if not make an impairment.

In evaluating whether DTA can be realised, management considers both positive and negative evidence, including projected future taxable income, the scheduled reversal of deferred tax liabilities and tax planning strategies. This evaluation requires significant management judgement, primarily with respect to projected taxable income, also taking into account the history of recent losses of the bank (primarily arising from the financial crisis that started in late 2008 and thereafter). The future taxable income can never be predicted with certainty, but management also evaluated the factors contributing to the losses and considered whether or not they are temporary or indicate an expected permanent decline in earnings. The evaluation is derived from budgets and strategic business plans but is dependent on numerous factors, some of which are beyond management's control, such as the fiscal and regulatory environment and external economic growth conditions. Substantial variance of actual results from estimated future taxable profits, or changes in CSi group's estimate of future taxable profits and potential restructurings, could lead to changes in the amount of DTA that are realisable, or considered realisable, and would require a corresponding adjustment to the level of recognised DTA.

As a consequence of this evaluation, it was considered that the DTA should be impaired by USD 319 million. The Bank's assessment is that remaining recognised trading losses carried forward should be utilised within a period of 4 years. If strategies and business plans will significantly deviate in the future from current management assumptions, the current level of deferred tax assets may need to be adjusted if full recovery of the remaining DTA balance is no longer probable.

## 14. Securities Borrowed, Lent and Subject to Resale or Repurchase Agreements

The following table summarises the securities purchased under agreements to resell and securities borrowing transactions, at their respective carrying values:

| Group and Bank | 2013 | 2012 |
|---|---|---|
| **Securities borrowed or purchased under agreement to resell (USD million)** | | |
| Securities purchased under resale agreements | 19,730 | 19,966 |
| Deposits paid for securities borrowed | 1,968 | 4,137 |
| **Total securities borrowed or purchased under agreement to resell** | **21,698** | **24,103** |

The following table summarise the securities lent under agreements to repurchase and securities lending transactions, at their respective carrying values:

| Group and Bank | 2013 | 2012 |
|---|---|---|
| **Securities lent or sold under agreement to repurchase (USD million)** | | |
| Securities sold under repurchase agreements | 3,077 | 2,220 |
| Deposits received for securities lent | 1,959 | 2,654 |
| **Total securities lent or sold under agreement to repurchase** | **5,036** | **4,874** |

Securities borrowed, lent and subject to resale and repurchase agreements are mainly due within one year.

Repurchase and reverse repurchase agreements represent collateralised financing transactions used to earn net interest income, increase liquidity or facilitate trading activity. These instruments are collateralised principally by government securities and money market instruments and generally have terms ranging from overnight to a longer or unspecified period of maturity. The CSi group monitors the fair value of securities received or delivered. For securities purchased under resale agreements, the CSi group requests additional securities, or the return of a portion of the cash disbursed when appropriate, in response to a decline in the market value of the securities received. Similarly, the return of excess securities or additional cash is requested, when appropriate, in response to an increase in the market value of securities sold under repurchase agreements.

Deposits paid for securities borrowed and deposits received for securities lent are recorded at the amount of cash paid or received. These transactions are typically collateralised by cash or marketable securities. For securities lending transactions, the CSi group receives cash or securities as collateral in an amount generally in excess of the market value of securities lent. The CSi group monitors the market value of securities borrowed and securities on a daily basis and additional collateral is obtained as necessary.

## 15. Trading Financial Assets and Liabilities at Fair Value Through Profit or Loss

| | Group | | Bank | |
|---|---|---|---|---|
| **Trading financial assets at fair value through profit or loss (USD million)** | **2013** | **2012** | **2013** | **2012** |
| Debt securities | 31,046 | 34,896 | 30,907 | 34,796 |
| Equity securities | 12,060 | 14,558 | 11,307 | 13,715 |
| Derivative instrument | 348,292 | 500,362 | 348,684 | 500,717 |
| Other | 2,559 | 1,647 | 3,074 | 2,204 |
| **Trading financial assets at fair value through profit or loss** | **393,957** | **551,463** | **393,972** | **551,432** |

| | Group | | Bank | |
|---|---|---|---|---|
| **Trading financial liabilities at fair value through profit or loss (USD million)** | **2013** | **2012** | **2013** | **2012** |
| Short positions | 8,439 | 11,472 | 8,439 | 11,472 |
| Derivative instruments | 357,643 | 508,395 | 357,955 | 508,541 |
| Other | 16 | - | 16 | - |
| **Trading financial liabilities at fair value through profit or loss** | **366,098** | **519,867** | **366,410** | **520,013** |

Debt instruments primarily consist of corporate bonds and government securities.
Trading financial assets include USD 23 billion (2012: USD 32.6 billion) which are encumbered. The transactions in relation to the encumbered assets are conducted under terms that are usual and customary for securities lent, repurchase agreements or other collateralised borrowings.

## 16. Financial Assets and Liabilities Designated at Fair Value Through Profit or Loss

| | Group | | Bank | |
|---|---|---|---|---|
| **Financial assets designated at fair value through profit or loss (USD million)** | **2013** | **2012** | **2013** | **2012** |
| Debt securities | - | 80 | - | 80 |
| Loans | 10,493 | 10,447 | 10,493 | 10,447 |
| Securities purchased under resale agreements and securities borrowing transactions | 7,597 | 5,283 | 7,597 | 5,283 |
| Other | 2,474 | 4,318 | 2,474 | 4,318 |
| **Total financial assets designated at fair value through profit or loss** | **20,564** | **20,128** | **20,564** | **20,128** |

Of the financial assets designated at fair value through profit or loss, loans and reverse repurchase agreements were elected to alleviate an accounting mismatch while debt instruments were elected because they are managed on a fair value basis.

For loans designated at fair value through profit or loss, the maximum fair value exposure to credit risk as at 31 December 2013 was USD 10.5 billion (2012: USD 10.5 billion). To mitigate this credit risk, securities are held as collateral, and credit default swaps with a notional value of USD 2.3 billion (2012: USD 1.5 billion) have been transacted to transfer this risk into the capital markets.

The fair value movement attributable to counterparty credit on loans designated at fair value through profit or loss is calculated using credit spreads applicable to specific points in time. All other risk variables are held constant and the credit spreads are moved based on current market conditions. During the year ended 31 December 2013, this fair value movement was a decrease of USD 91 million (2012: increase USD 655 million). The cumulative effect thereon at the year-end was a decrease of USD 1.19 billion (2012: decrease USD 1.1 billion). The corresponding increase in fair value of the swaps and securities in place to mitigate this risk was USD 26 million (2012: increase USD 84 million). The cumulative effect thereon at the year-end was an increase of USD 2.17 billion (2012: increase USD 2.2 billion).

For securities purchased under resale agreements, the Bank's credit exposure to the counterparties of these trades is mitigated by posted collateral and through subsequent margin calls. Accordingly, the Bank does not enter into hedges to mitigate credit exposure to its counterparties. Also, given that the credit exposure is almost eliminated, the fair value changes attributable to credit risk is insignificant.

The debt instruments measured at fair value through profit or loss are government securities.

| Financial liabilities designated at fair value through profit or loss (USD million) | Group 2013 | Group 2012 | Bank 2013 | Bank 2012 |
|---|---|---|---|---|
| Subordinated debt | 315 | 296 | 315 | 296 |
| Structured notes (included in Long term debt and Short term borrowings) | 21,995 | 18,158 | 21,061 | 18,133 |
| Deposits | - | 4,611 | - | 4,785 |
| Securities sold under repurchase agreements and securities lending transactions | 8,239 | 10,773 | 8,239 | 10,773 |
| Other | 1,280 | 2,806 | 1,280 | 1,810 |
| **Total financial liabilities designated at fair value through profit or loss** | **31,829** | **36,644** | **30,895** | **35,797** |

Of the other financial liabilities designated at fair value through profit or loss, subordinated debt, bonds and repurchase agreements were primarily elected to alleviate an accounting mismatch, while structured notes and deposits were mainly elected because they are managed on a fair value basis.

The fair value of a financial liability incorporates the credit risk of that financial liability. If the instrument is quoted in an active market, the movement in fair value due to credit risk is calculated as the amount of change in fair value that is not attributable to changes in market conditions that give rise to market risk. If the instrument is not quoted in an active market, the fair value is calculated using a valuation technique that incorporates credit risk by discounting the contractual cash flows on the debt using a credit-adjusted yield curve which reflects the level at which the CSi group would issue similar instruments as of the reporting date.

The fair value of subordinated debt and structured notes is calculated using a yield curve which reflects the CSi group's credit rating in the market. This is achieved by adjusting the relevant yield curve by the CSi group's credit spread, dependent on the tier of the debt, at each point in the curve to provide an own credit adjusted valuation.

The carrying amount is USD 0.4 billion higher than the principal amount that the CSi group would be contractually required to pay to the holder of these financial liabilities at maturity (2012: USD 0.5 billion higher).

## 17. Other Loans and Receivables

The following table sets forth details of the domestic (United Kingdom) and foreign portfolios:

| Loans (USD million) | Group 2013 | Group 2012 | Bank 2013 | Bank 2012 |
|---|---|---|---|---|
| Real estate | - | 16 | - | 16 |
| Commercial and industrial loans | 452 | 1,069 | 452 | 1,073 |
| Financial institutions | 4,041 | 12,461 | 4,041 | 12,461 |
| **Gross loans** | **4,493** | **13,546** | **4,493** | **13,550** |
| ■ of which domestic | 3,045 | 12,053 | 3,045 | 12,053 |
| ■ of which foreign | 1,448 | 1,493 | 1,448 | 1,497 |
| Net unearned income | (12) | (19) | (12) | (19) |
| Allowance for loan losses | (11) | (18) | (11) | (18) |
| **Net loans** | **4,470** | **13,509** | **4,470** | **13,513** |
| **Gross impaired loans** | **-** | **37** | **-** | **37** |
| ■ of which loans with an individual allowance | - | 2 | - | 2 |
| ■ of which loans without an individual allowance | - | 35 | - | 35 |

Other loans and receivables due within one year for the CSi group and Bank, amount to USD 3,183 million (2012: USD 557 million).

### Reconciliation of the allowance for loan losses by class

The following table sets forth the movements in the allowances for impairment losses on other loans and receivables:

| Group | Banks | Customers | Total |
|---|---|---|---|
| **Allowance for loan losses (USD million)** | | | |
| Balance at 1 January 2013 | (6) | (12) | (18) |
| ▪ Additional allowances for impairment losses | (5) | (2) | (7) |
| ▪ Reversal of allowances for impairment losses | 3 | 12 | 15 |
| Movement recognised in Consolidated Statement of Income | (2) | 10 | 8 |
| ▪ Net write backs | - | (1) | (1) |
| **Balance at 31 December 2013** | **(8)** | **(3)** | **(11)** |
| Balance at 1 January 2012 | (7) | (52) | (59) |
| ▪ Additional allowances for impairment losses | (2) | (14) | (16) |
| ▪ Reversal of allowances for impairment losses | 3 | 52 | 55 |
| Movement recognised in Consolidated Statement of Income | 1 | 38 | 39 |
| ▪ Net write backs | - | 2 | 2 |
| **Balance at 31 December 2012** | **(6)** | **(12)** | **(18)** |

| Bank | Banks | Customers | Total |
|---|---|---|---|
| **Allowance for loan losses (USD million)** | | | |
| Balance at 1 January 2013 | (6) | (12) | (18) |
| ▪ Additional allowances for impairment losses | (5) | (2) | (7) |
| ▪ Reversal of allowances for impairment losses | 3 | 12 | 15 |
| Movement recognised in Consolidated Statement of Income | (2) | 10 | 8 |
| ▪ Net write backs | - | (1) | (1) |
| **Balance at 31 December 2013** | **(8)** | **(3)** | **(11)** |
| Balance at 1 January 2012 | (7) | (54) | (61) |
| ▪ Additional allowances for impairment losses | (2) | (14) | (16) |
| ▪ Reversal of allowances for impairment losses | 3 | 52 | 55 |
| Movement recognised in Consolidated Statement of Income | 1 | 38 | 39 |
| ▪ Net write backs | - | 4 | 4 |
| **Balance at 31 December 2012** | **(6)** | **(12)** | **(18)** |

## 18. Investment Property

The CSi group consolidates a number of SPEs which hold property. Investment properties are currently held at cost less depreciation and provision for impairment. Due to a fall in indicative open market value, an impairment charge of USD 51 million (2012: USD 14 million) was taken to the Consolidated Statement of Income for the year. The fair value and carrying value amount were the same as at 31 December 2013.

| Group | 2013 | 2012 |
|---|---|---|
| **Investment property (USD million)** | | |
| Balance at the beginning of the year | 518 | 561 |
| Reclassification to real estate held-for-sale | (1) | - |
| Depreciation charge for the year | (11) | (7) |
| Impairment charge for the year | (51) | (14) |
| Foreign Currency Translation | 11 | (22) |
| **Balance at the end of year** | **466** | **518** |

## 19. Other Assets and Other Liabilities

| | Group | | Bank | |
|---|---|---|---|---|
| | **2013** | **2012** | **2013** | **2012** |
| **Other assets (USD million)** | | | | |
| Brokerage receivables (refer to Note 20) | 4,608 | 2,057 | 4,608 | 2,053 |
| Interest and fees receivable | 196 | 203 | 184 | 514 |
| **Cash collateral on derivative instruments** | | | | |
| ■ Banks | 15,342 | 24,580 | 15,342 | 24,580 |
| ■ Customers | 19,199 | 26,783 | 19,199 | 26,783 |
| Other | 193 | 337 | 193 | 338 |
| **Other assets** | **39,538** | **53,960** | **39,526** | **54,268** |

Other assets are mainly due within one year.

| | Group | | Bank | |
|---|---|---|---|---|
| | **2013** | **2012** | **2013** | **2012** |
| **Other liabilities (USD million)** | | | | |
| Brokerage payables (refer to Note 20) | 1,250 | 2,570 | 1250 | 2,567 |
| Interest and fees payable | 943 | 974 | 943 | 1,299 |
| **Cash collateral on derivative instruments** | | | | |
| ■ Banks | 16,308 | 28,658 | 16,308 | 28,658 |
| ■ Customers | 12,459 | 11,718 | 12,459 | 11,718 |
| Failed sales | 69 | 259 | 69 | 259 |
| Share-based compensation liability | 147 | 103 | 144 | 109 |
| Other | 8,408 | 684 | 8,393 | 670 |
| **Other liabilities** | **39,584** | **44,966** | **39,566** | **45,280** |

## 20. Brokerage Receivables and Brokerage Payables

Brokerage receivables and payables included in the table below represent amounts due to and from banks, brokers and dealers as well as customers for varying transaction types. Included within these balances are margin accounts where cash has been deposited with an exchange, bank or broker to facilitate future transactions and where the CSi group requires customers to maintain margin collateral in compliance with applicable regulatory and internal guidelines.

The CSi group also enters into fully margined exchange traded derivatives such as futures and balance payable to or receivable from the exchange the next day are recorded in the brokerage balances. In addition the CSi group performs brokerage and clearance activities for clients where exchange fees are incurred and receivable from clients.

| | Group | | Bank | |
|---|---|---|---|---|
| | **2013** | **2012** | **2013** | **2012** |
| **Brokerage receivable (USD million)** | | | | |
| Due from customers | 143 | 650 | 143 | 646 |
| Due from banks, brokers and dealers | 4,465 | 1,407 | 4,465 | 1,407 |
| **Total brokerage receivables** | **4,608** | **2,057** | **4,608** | **2,053** |
| | | | | |
| **Brokerage payable (USD million)** | | | | |
| Due to customers | 61 | 278 | 61 | 275 |
| Due to banks, brokers and dealers | 1,189 | 2,292 | 1,189 | 2,292 |
| **Total brokerage payables** | **1,250** | **2,570** | **1,250** | **2,567** |

During the current reporting period there were no defaults or breaches in respect of third party loan payables.

The CSi group and Bank held USD 158 million as at 31st December 2013 (2012: USD 391 million). This cash is recorded under 'Cash and due from banks' and the corresponding liability is included in 'Other liabilities'.

## 21. Significant Subsidiaries

### Significant subsidiaries:

| **Bank** | **2013** | **2012** |
|---|---|---|
| Investments in subsidiary undertakings (USD million) | 10 | 10 |

The subsidiary undertakings, direct and indirect, of the Bank at 31 December 2013, all of which are consolidated in these financial statements, are as follows:

| **Bank** | **Country of Incorporation** | **% Equity Held** |
|---|---|---|
| **Direct holdings:** | | |
| Credit Suisse First Boston International (USA), Inc. | United States | 100% |
| CSFB International Trading, L.L.C. | United States | 100% |

The business of all of the subsidiaries is complementary to the business of the Bank.

## 22. Property and Equipment

| **Group 2013** | **Leasehold Improvements** | **Computer Equipment** | **Office Equipment** | **Total** |
|---|---|---|---|---|
| **Property and equipment (USD million)** | | | | |
| **Cost:** | | | | |

## 24. Deposits

| **Group and Bank** | | |
|---|---|---|
| **Deposits (USD million)** | **2013** | **2012** |
| Non-interest bearing demand deposits | 12 | 111 |
| Interest-bearing demand deposits | 2,477 | 2,082 |
| Time deposits | 2,843 | 2,651 |
| **Total deposits** | **5,332** | **4,844** |
| Of which due to banks | 2,965 | 2,811 |
| Of which due to customers | 2,367 | 2,033 |

## 25. Short Term Borrowings

| | **Group** | | **Bank** | |
|---|---|---|---|---|
| | **2013** | **2012** | **2013** | **2012** |
| **Short-term borrowings (USD million)** | | | | |
| Short term borrowings: | | | | |
| from banks | 15,619 | 20,690 | 15,619 | 20,690 |
| from customers | 5 | 9,028 | 5 | 9,052 |
| **Total short term borrowings** | **15,624** | **29,718** | **15,624** | **29,742** |

## 26. Provisions

| Group and Bank | Property | Litigation | Total |
|---|---|---|---|
| **Provisions (USD million)** | | | |
| Balance at 1 January 2013 | 4 | 20 | 24 |
| Charges during the year | - | (2) | (2) |
| Utilised during the year | - | (8) | (8) |
| **Balance at 31 December 2013** | **4** | **10** | **14** |

| Group and Bank | Property | Litigation | Total |
|---|---|---|---|
| **Provisions (USD million)** | | | |
| Balance at 1 January 2012 | 4 | 22 | 26 |
| Charges during the year | - | 1 | 1 |
| Utilised during the year | - | (3) | (3) |
| **Balance at 31 December 2012** | **4** | **20** | **24** |

### Property provision

The property provision mainly relates to property reinstatement obligations that will be incurred when the leases expire.

| Building | Provision | Utilisation period |
|---|---|---|
| 17 Columbus Courtyard, London | USD 1 million | 31 December 2024 |
| 5 Canada Square, London | USD 2 million | 31 December 2027 |
| Pall Mall, London | USD 1 million | 31 March 2018 |

### Litigation provision

The CSi group accrues litigation provisions (including fees and expenses of external lawyers and other service providers) in connection with certain judicial, regulatory and arbitration proceedings when reasonably possible losses, additional losses or ranges of loss are probable and reasonably estimable. General Counsel in consultation with the business reviews CS group's judicial, regulatory and arbitration proceedings each quarter to determine the adequacy of its litigation provisions and may increase or release provisions based on management's judgement and the advice of counsel. The anticipated utilisation of these litigation provisions typically ranges from six to eighteen month period, however certain litigation provisions are anticipated to extend beyond this period. Further provisions or releases of litigation provisions may be necessary in the future as developments in such litigation, claims or proceedings warrant.

The litigation provision relates to legal cases that the Bank is defending. The exact timing of outflow of economic benefits cannot be ascertained at 31 December 2013.

## 27. Long Term Debt

| | Group | | Bank | |
|---|---|---|---|---|
| | **2013** | **2012** | **2013** | **2012** |
| **Long term debt (USD million)** | | | | |
| Senior debt | 11,730 | 22,283 | 11,741 | 22,278 |
| Subordinated debt | 9,713 | 8,371 | 9,713 | 8,371 |
| **Total long term debt** | **21,443** | **30,654** | **21,454** | **30,649** |

The increase in subordinated debt was principally as a result of the drawdown of a USD 1.1 billion Lower Tier 2 subordinated loan from Credit Suisse AG.

Total long term debt is comprised of debt issuances managed by Treasury which do not contain derivative features (vanilla debt), as well as hybrid debt instruments with embedded derivatives, which are issued as part of the CSi group' structured activities.

## 28. Share Capital and Share Premium

### Share Capital

| **Group and Bank** | **2013** | **2012** |
|---|---|---|
| **Allotted, called-up and fully paid (USD)** | | |
| Ordinary voting shares of USD 0.1 each | 13 | 13 |
| Participating non-voting shares of USD 0.1 each | 13,107,655,992 | 3,107,655,992 |
| **Total allotted, called-up and fully paid capital** | **13,107,656,005** | **3,107,656,005** |

### Share Premium

| **Group and Bank** | **2013** | **2012** |
|---|---|---|
| **Share premium (USD)** | | |
| Opening balance | 12,698,984,345 | 1,016,106,287 |
| Reduction in face value of Ordinary shares | - | 112 |
| Transfer of Participating shares relating to capital restructuring | - | 3,950,611,279 |
| Transfer of Preference shares relating to capital restructuring | - | 5,235,000,000 |
| Issuance of Participating shares relating to capital restructuring | - | (581,666,666) |
| Conversion of subordinated debt to Participating shares relating to capital restructuring | - | 2,634,488,889 |
| Issuance of Participating shares | - | 444,444,444 |
| **Closing balance** | **12,698,984,345** | **12,698,984,345** |

The Ordinary Shares carry voting rights but do not carry the right to receive dividends.

The Participating Shares do not carry voting rights but carry the right to receive dividends. In all other respects the Participating Shares and the Ordinary Shares rank pari passu.

There was a capital injection of USD 10 billion which was in in line with Banks initiatives to align the subsidiary's capital with the Capital Requirements Regulation ('CRR'). This was through the issue of Class B participating non-voting shares of USD 0.1 each to the existing shareholders in proportion to their shareholdings.

## 29. Retirement Benefit Obligations

The following disclosures contain the balances for the entire defined benefit plan sponsored by Credit Suisse Securities (Europe) Limited ('CSSEL'), of which the Bank is one of many participants, who are all related parties under common control. The Bank accounts for its share of the plan using defined contribution accounting. During 2013 the Bank expensed USD 1.2 million (2012: USD 8.3 million) in respect of its contributions to the UK defined benefit scheme.

### Profile of the pension plans

Approximately 13% of the UK plan's final salary liabilities are attributable to current employees, 71% to former employees yet to retire and 16% to current pensioners and dependants. The liabilities of the other plans in aggregate are broadly split 44% to current employees, 51% to former employees yet to retire and 5% to current pensioners and dependents. The UK plan duration is an indicator of the weighted-average time until benefits payments are made.

For the UK plan as a whole the duration is around 25 years reflecting the approximate split of the defined benefit obligation between current employees (duration of 28 years), deferred members (duration of 26 years) and current pensioners (duration of 15 years).

The following table shows the changes in the defined benefit obligation and the fair value of plan assets during 2013 and 2012, and the amounts included in CSSEL's consolidated financial statements for the defined benefit pension plan as at 31 December 2013 and 2012 respectively:

| **Group and Bank** | **2013** | **2012** |
|---|---|---|
| **Defined benefit pension plans (USD million)** | | |
| Defined benefit obligation – 1 January | 1,508 | 1,399 |
| Current service cost | 5 | 6 |
| Interest cost | 69 | 71 |
| Actuarial losses on assumptions | 95 | 7 |
| arising out of changes in demographic assumptions | (13) | (20) |
| arising out of changes in financial assumptions | 108 | 27 |
| Actuarial (gains)/ losses – experience | (5) | (2) |
| Benefit payments | (24) | (33) |
| Past service costs (including curtailments) [1] | - | (7) |
| Exchange rate losses | 36 | 67 |
| **Defined benefit obligation – 31 December** | **1,684** | **1,508** |
| | | |
| Fair value of plan assets – 1 January | 2,159 | 1,858 |
| Expected return on plan assets | 100 | 97 |
| Actuarial gains | (31) | 54 |
| **Actual return on plan assets** | **69** | **151** |
| Employer Contributions | 9 | 92 |
| Administrative expense | (2) | (2) |
| Benefit payments | (23) | (33) |
| Exchange rate losses/(losses) | 53 | 93 |
| **Fair value of plan assets – 31 December** | **2,265** | **2,159** |

[1] Past Sevice costs contains a curtailment impacts related to the headcount reduction in 2012 in the context of the cost efficiency program as announced by management.

## Funding requirements

UK legislation requires that pension schemes are funded prudently. The last funding valuation of the UK plan was carried out by a qualified actuary as at 31 December 2011 and showed a deficit of £61.2 million. The Bank and Trustee agreed that no future shortfall contributions would be paid because the shortfall contributions paid soon after the valuation date and the allowance for post-valuation experience were sufficient to recover the shortfall.

The next funding valuation is due no later than 31 December 2014 at which progress towards full-funding will be reviewed.

Contributions will be paid to cover administrative expenses, administration rebates and death in service pensions. Expected regular contributions to be paid to the UK defined benefit plan for all participating entities for the year ending 31 December 2014 is approximately USD 9 million.

## Assumptions

The assumptions used in the measurement of the defined benefit obligation and net periodic pension cost for the Credit Suisse UK pension plan as at 31 December were as follows:

| Group and Bank | 2013 | 2012 |
|---|---|---|
| **Benefit obligations (%)** | | |
| Discount rate | 4.60 | 4.80 |
| Retail Price Inflation | 3.35 | 3.10 |
| Consumer Price Inflation | 2.35 | 2.40 |
| Pension increases [1] | 3.20 | 3.00 |
| Salary increases | 4.60 | 4.35 |
| **Net periodic pension cost (%)** | | |
| Discount rate | 4.80 | 4.90 |
| Salary increases | 4.35 | 4.45 |

[1] Pension earned pre 6 April 1997 are subject to pension increases on a discretionary basis, which were considered to be Nil.

## Mortality Assumptions

The life expectancy assumptions for 2013 are similar to those used for 2012.

The assumptions for life expectancy for the 2013 benefit obligation pursuant to IAS 19 are based on the "SAPS light" base table with improvements in mortality in line with the core CMI 2012 projections and a scaling factor of 100%. Underpins to future mortality improvement have also been incorporated, the annual long term rate of improvement being 1.25% p.a.

On this basis the post-retirement mortality assumptions are as follows:

| | 2013 | 2012 |
|---|---|---|
| Life expectancy at age 60 for current pensioners aged 60 (years) | | |
| ■ Males | 28.7 | 28.9 |
| ■ Females | 30.0 | 30.2 |
| Life expectancy at age 60 for future pensioners currently aged 40 (years) | | |
| ■ Males | 30.7 | 30.9 |
| ■ Females | 32.0 | 32.2 |

## Sensitivity Analysis

Changes in the principal assumptions used to measure the benefit obligation cost would have had the following effects:

| | Increase USDM | Increase % | Decrease USDM | Decrease % |
|---|---|---|---|---|
| **Benefit obligation** | | | | |
| One-percentage point change | | | | |
| - 1%/ +1% Discount rate | 2,140 | 27 | 1,335 | (21) |
| +1% / -1% Inflation rate | 1,979 | 18 | 1,435 | (15) |
| +1% / -1% Salary increases rate | 1,695 | 1 | 1,674 | (1) |
| +1 / -1 year to life expectancy at 60 | 1,918 | 2 | 1,651 | (2) |

The sensitivity analysis above has been derived using a number of additional full valuation runs that have been carried out using the same data as that used for calculating the 2013 defined benefit obligation. The sensitivity analysis focuses on changes to the obligation. For the sensitivities to discount rate and inflation rates the impact on the UK funded status will most likely be lower to the impact on the benefit obligation, as a result of the assets being (partially) matched to the obligations.

The methodology used to calculate the sensitivities is consistent with previous years.

## Plan assets and investment strategy

Responsibility for governance and running of the UK Plan, including investment decisions (after consultation with the Company) and contribution schedules (which requires the agreement of the Company) – lies with the board of trustees. The Company's defined benefit pension plan looks to minimise risk subject to adopting an investment strategy that has a reasonable expectation of achieving a certain level of return by investing in a range of asset classes of appropriate liquidity and security which will generate income and capital growth to meet, together with agreed contributions from the Company, the cost of benefits. Risk tolerance is established through careful consideration of plan liabilities, plan funded status and corporate financial condition.

The Fund has a hedging target of around 80% of interest rate and inflation risk arising from the Economic Value of the liabilities. Guidelines have been put in place for the hedging portfolio to limit the risk between it and the basis on which the Economic Value of the liabilities is calculated. In particular limits have been placed on the level of exposure that may be obtained from bonds and gilt total return swaps, both in terms of interest rate and inflation sensitivity.

Equity investments are diversified across UK and non-UK stocks as well as between growth, value and small and large capitalisation stocks. Other assets such as hedge funds are used to enhance long term returns while improving portfolio diversification.

Equity investments are diversified across UK and non-UK stocks as well as between growth, value and small and large capitalisation stocks. Other assets such as hedge funds are used to enhance long term returns while improving portfolio diversification.

Investment risk is measured and monitored on an ongoing basis through annual liability measurements, periodic asset/liability studies and quarterly investment portfolio reviews. To limit investment risk, the Company's pension plans follow defined strategic asset allocation guidelines. Depending on the market conditions, these guidelines are even more limited on a short-term basis.

## Risks Associated with UK Plan

The UK plan exposes the Company to a number of risks, the most significant of which are:

### Asset volatility

The liabilities are calculated using a discount rate set with reference to corporate bond yields; if assets underperform this yield, this will reduce the surplus. The UK plan holds a significant proportion of growth assets (equities, diversified growth fund and global absolute return fund) which, though expected to outperform corporate bonds in the long-term, create volatility and risk in the short-term. The allocation to growth assets is monitored to ensure it remains appropriate given the UK plan's long term objectives.

### Changes in bond yields

A decrease in corporate bond yields will increase the value placed on the UK plan's liabilities for accounting purposes, although this will be partially offset by an increase in the value of the plan's bond holdings. The plan does hedge interest rate risk, so whilst it might be expected that the hedge increases in value if bond yields decrease, the plan is exposed to the extent that the hedge is not designed to cover 100% of the accounting defined benefit obligation and also the fact that the hedge does not mitigate decreases in credit spreads.

### Inflation Risk

A significant proportion of the UK plan's benefit obligations are linked to inflation, and higher inflation will lead to higher liabilities (although, in most cases, caps on the level of inflationary increases are in place to protect against extreme inflation). The majority of the assets are either unaffected by or only loosely correlated with inflation, meaning that an increase in inflation will also increase the deficit to the extent that the inflation swap does not match the increase.

### Life expectancy

The majority of the UK plans's obligations are to provide benefits for the life of the member, so increases in life expectancy will result in an increase in the liabilities.

| | **Defined Benefit Pension Plans UK Plans 2013** |

## Defined Contribution Pension Plans

The Bank also contributes to various defined contribution pensions primarily in the United Kingdom. The contributions in these plans during 2013 and 2012 were USD 12 million and USD 14 million respectively.

## 30. Employee Share-based Compensation and Other Compensation Benefits

Payment of share-based compensation and other compensation benefits is determined by the nature of the business, role, location and performance of the employee. Unless there is a contractual obligation, granting deferred compensation is solely at the discretion of senior management. Special deferred compensation granted as part of a contractual obligation is typically used to compensate new senior employees in a single year for forfeited awards from previous employers upon joining the Bank. It is the Bank's policy not to make multi-year guarantees.

Compensation expense for share-based and other awards that were granted as deferred compensation is recognised in accordance with the specific terms and conditions of each respective award and is primarily recognised over the future requisite service and vesting period, which is determined by the plan, retirement eligibility of employees, two-year moratorium periods on early retirement and certain other terms. All deferred compensation plans are subject to non-compete and non-solicit provisions. Compensation expense for share based and other awards that were granted as deferred compensation also includes the current estimated outcome of applicable performance criteria, estimated future forfeitures and mark-to-market adjustments for certain awards that are still outstanding.

Total compensation expense for cash-settled share-based compensation plans recognised during 2013 and 2012 was USD 127 million and USD 66 million respectively. The total stock award liability recorded as at 31 December 2013 was USD147 million (2012: USD 103 million). The fair value used to calculate the stock award liability was the closing Credit Suisse Group share price as at 31 December 2013 CHF 27.27 (2012: CHF 22.26). The average weighted fair value of awards granted in 2013 was CHF 26.39 (2012: CHF 22.26). The intrinsic value of vested share based awards outstanding as at year end was USD 24 million (2012: USD19 million).

The recognition of compensation expense for the deferred compensation awards granted in January 2014 began in 2014 and thus had no impact on the 2013 financial statements.

### Performance Share Awards

Certain employees received a portion of their deferred variable compensation in the form of performance share awards, which are subject to explicit performance-related claw-back provisions. Each performance share award granted entitles the holder of award to receive one CSG share. Performance share awards also vest over three years, such that the performance share awards vest equally on each of the three anniversaries of the grant date. Unlike the Phantom share awards, however, the outstanding performance share awards are subject to a negative adjustment in the event of a divisional loss or a negative CSG ROE. Outstanding performance shares are subject to a negative adjustment in the event of a divisional loss, unless there is a negative CSG ROE that would call for a negative adjustment greater than the divisional adjustment for the year, in which case the negative adjustment is based on the CSG's negative ROE. For employees in Shared Services, the negative adjustment only applies in the event of a negative CSG ROE and is not linked to the performance of the divisions.

The performance share awards granted in 2014 are identical to those granted in 2013 and 2012, with the exception of the performance criteria which, in 2012, were based on reported CSG ROE, compared to the performance share awards granted in 2014 and 2013, which are based on underlying CSG ROE.

The number of performance share awards granted to employees was determined by dividing the deferred component of variable compensation being granted as performance shares by the average price of a CSG share over the twelve business days ended January 15, 2014. The fair value of each January 2014 Performance Share award was CHF 28.13 on the grant date. Performance share awards granted after January 1, 2014 do not include the right to receive dividend equivalents during the vesting period. The fair value was based on a valuation using the CSG's share price on the date of grant and discounted for expected dividends for 2014, 2015 and 2016 of CHF 0.74, CHF 0.94 and CHF 1.13, respectively

Movements in the number of PSA outstanding were as follows:

| **Group and Bank** | **2013** | **2012** |
|---|---|---|
| **Number of units (millions)** | | |
| As at 1 January | 1.00 | - |
| Granted | 1.16 | 1.09 |
| Share transferred in/ out | 0.06 | 0.03 |
| Delivered | (0.31) | - |
| Forfeited | (0.03) | (0.12) |
| **As at 31 December** | **1.88** | **1.00** |

## Phantom Share Awards

Share awards granted in January 2014 are similar to those granted in January 2013 and are awarded to certain employees in the Bank. Each share award granted entitles the holder of the award to receive one Credit Suisse Group ("CSG") share, does not contain a leverage component or a multiplier effect and is subject to service conditions as it vests over three years, such that the share awards vest equally on each of the three anniversaries of the grant date. Share awards granted in January 2011 vest over a four-year period. The value of these share awards is solely dependent on the CSG share price at the time of delivery.

The share awards include other awards, such as blocked shares and special awards, which may be granted to new employees. These awards entitle the holder to receive one CSG share, subject to continued employment with the Bank, contain restrictive covenants and cancellation provisions and generally vest between zero and five years.

The number of share awards was determined by dividing the deferred component of variable compensation being granted as shares by the average price of a CSG share over the twelve business days ended January 15, 2014. Share awards granted after January 1, 2014 do not include the right to receive dividend equivalents during the vesting period. The fair value of each January 2014 share award was CHF 28.13 on the grant date. The fair value was based on a valuation using the CSG's share price on the date of grant and discounted for expected dividends for 2014, 2015 and 2016 of CHF 0.74, CHF 0.94 and CHF 1.13, respectively.

In order to comply with regulatory requirements, the CSG awarded an alternative form of share awards as a component of unrestricted cash to certain senior employees. For 2013, 2012 and 2011, these employees received a portion of the amount they otherwise would have received in cash in the form of blocked shares. The shares remain blocked for a period of time, which ranges from six months to three years, depending on the location, after which they are no longer subject to restrictions. Blocked shares granted on January 16, 2014 vest immediately upon grant, have no future service requirements and were attributed to services performed in 2013.

Movements in the number of units outstanding were as follows:

| **Group and Bank** | **2013** | **2012** |

| Delivered | (1.33) | (1.10) |
| Forfeited | (0.20) | (0.25) |
| **As at 31 December** | **3.96** | **3.05** |

### Plus Bond awards

Certain employees received a portion of their 2012 deferred variable compensation in the form of Plus Bond awards. The Plus Bond award is essentially a fixed income instrument, denominated in US dollars, which provides a coupon payment that is commensurate with market-based pricing. Plus Bond award holders are entitled to receive semi-annual cash payments on their adjusted award amounts at the rate of London Interbank Offered Rate (LIBOR) plus 7.875% per annum until settlement. The Plus Bond will settle in the summer of 2016 based on the amount of the initial award less portfolio losses, if any, in excess of a first loss portion retained by CSG of approximately USD 600 million. The value of the Plus Bond awards is based on the performance of a portfolio of unrated and sub-investment-grade asset-backed securities that are held in inventory by various trading desks of CSG's Investment Banking division. While the Plus Bond award is a cash-based instrument, CSG reserves the right to settle the award in CSG shares based on the share price at the time of final distribution. In addition, subject to oversight procedures, CSG retains the right to prepay all or a portion of the Plus Bond award in cash at any time and, in the event of certain regulatory developments or changes on capital treatment, exchange the award into CSG shares. The Plus Bond award plan contributes to a reduction of CSG's risk-weighted assets and constitutes a risk transfer from CSG to the Plus Bond award holders.

Plus Bonds were fully vested and expensed as of the grant date of December 31, 2012. Certain employees were given the opportunity in early 2013 to voluntarily reallocate a portion of the share award component of their deferred awards into the Plus Bond award. The Plus Bond awards resulting from the voluntary reallocation will vest on the third anniversary of the grant date in January 17, 2016 and will be expensed over the vesting period.

Total compensation expense recognised during the year ended December 31, 2013 was USD 1 million (2012: USD 15 million).

### 2012 Restricted Cash Awards

Certain employees received the cash component of their 2012 variable compensation in the form of Restricted Cash Awards. These awards are cash payments made on the grant date, but are subject to a pro-rata repayment by the employee in the event of voluntary resignation or termination for cause within three years of the award grant. The Restricted Cash Award is report as part of the deferred compensation award for the Bank even though the award is fully settled at grant date. The expense recognition will occur over the three-year vesting period, subject to service conditions.

On January 17, 2013, the Bank granted Restricted Cash Awards.

Total compensation expense recognised during the year ended December 31, 2013 was USD 17 million (2012: Nil).

### 2011 Partner Asset Facility ('PAF2')

As part of the 2011 annual compensation process, certain employees were awarded a portion of their deferred variable compensation in the form of 2011 Partner Asset Facility (PAF2) units. PAF2 units are essentially fixed income structured notes that are exposed to a portion of the credit risk that arises in CSG's derivative activities, including both current and possible future swaps and other derivative transactions. The value of the award (for both the interest accrual and the final redemption) will be reduced if the amount of realised credit losses from a specific reference portfolio exceeds a pre-defined threshold.

CSG will bear the first USD 500 million of any losses and the PAF2 holders, across a number of CS group entities including CSi, will bear any losses in excess of USD 500 million, up to the full amount of the deferred compensation awarded.

Certain employees received PAF2 awards, which vested in the first quarter of 2012.

The PAF2 units have a stated maturity of four years, but may be extended to nine years at the election of either CSG or the holders acting collectively. This election will not be made later than the end of the third year following the grant date. PAF2 units are denominated in US dollars. Holders will receive a semi-annual cash interest payment equivalent to an annual return of 6.5% applied to the then current balance of the PAF2 units. At maturity, PAF2 holders will receive a final settlement in an amount equal to the original award value less any losses. CSG can settle the PAF2 units in cash or an equivalent value in shares at its discretion.

In January 2012, CSG awarded PAF2 units and the associated compensation expenses were fully expensed in the first quarter of 2012, as the awards were fully vested as of March 31, 2012. Compensation expense will continue be updated at each reporting period date to reflect any change in the underlying fair value of the PAF2 awards until the awards are finally settled.

Total compensation expense recognised during the year ended December 31, 2013 was USD 4 million (2012: USD 34 million).

In February 2014, CSG provided employees who hold outstanding PAF2 awards with the opportunity to exchange their PAF2 awards. PAF2 awards were linked to a portfolio of CSG's credit exposures, providing risk offset and capital relief. Due to regulatory changes, this capital relief was no longer available after December 31, 2013. As a result, CSG terminated the PAF2 awards and exchanged them at fair value for other compensation awards in the form of one of the following options, or a combination thereof:

**Capital Opportunity Facility:** Participants elect for all or part of their PAF2 award to be referenced to a Capital Opportunity Facility (COF). The COF is a seven-year facility that is linked to the performance of a portfolio of risk-transfer and capital mitigation transactions chosen by the Partner Asset Facility management team. Participants who elect for the COF will receive distributions of 6.5% per annum until maturity;

**Contingent Capital Awards:** Participants elect to receive Contingent Capital Awards ('CCA'), with similar terms to the instruments used as part of the 2013 compensation awards. Settlement is expected to occur in early 2016, subject to regulatory approvals.

### Adjustable Performance Plan Awards ('APPA')

The Adjustable Performance Plan (APP) is a deferred compensation plan for certain employees. CSG introduced and granted APP cash awards as part of deferred compensation for 2009 (2009 APP) and 2010 (2010 APP).

The 2009 APP cash awards were fully vested and were expensed as of December 31, 2012 and were delivered in the first half of 2013.

The 2010 APP cash awards vest over a four-year period, with the final payout value subject to an upward or downward adjustment, depending on the financial performance of the specific business areas and the CSG ROE.

The adjustments are determined on an annual basis, increasing or decreasing the outstanding balances by a percentage equal to the reported CSG ROE, unless the division that granted the awards incurs a pre-tax loss. In this case, outstanding awards in that division will be subject to a negative adjustment of 15% for every CHF 1 billion of loss, unless a negative CSG ROE applies for that year and is greater than the divisional adjustment. For employees in Shared Services and other support functions, all outstanding 2010 APP cash awards are linked to CSG's adjusted profit or loss and the CSG ROE, but are not dependent upon the adjusted profit or loss of the business areas that they support.

Total compensation expense recognised for APP cash awards during the year ended December 31, 2013 was USD <1 million> (2012: USD 18 million).

In July 2012, CSG executed a voluntary exchange offer, under which employees had the right to voluntarily convert all or a portion of their respective unvested Adjustable Performance Plan cash awards into Adjustable Performance Plan share awards at a conversion price of CHF 16.29. Each Adjustable Performance Plan share award has a grant-date fair value of CHF 16.79 and contains the same contractual term, vesting period, performance criteria and other terms and conditions as the original Adjustable Performance Plan cash award.

Movements in the number of APP outstanding were as follows:

| Group and Bank | 2013 | 2012 |
|---|---|---|

| Forfeited | - | - |
| **As at 31 December** | **0.27** | **0.81** |

### Scaled Incentive Share Unit ('SISU')

The Scaled Incentive Share Units ("SISUs") plan is a share-based, long-term incentive plan. SISUs were granted in January 2010 as part of 2009 variable deferred compensation. SISUs are similar to ISUs (refer to Incentive Share Unit) except with four-year vesting, subject to early retirement rules, and the leverage component contains an additional performance condition which could increase or decrease the number of any additional shares. The SISU base unit vests equally on each of the four anniversaries of the grant date, whereas the SISU leverage unit will only vest on the fourth anniversary of the grant date. The new performance condition links the final delivery of additional shares to an average of the reported CSG ROE. If the CSG average ROE over the four-year period is higher than a pre-set target established at the grant date, the number of additional shares calculated by reference to the average CSG share price increase will be adjusted positively, and if it is below the target, the number of additional shares will be adjusted negatively, but not below zero. The final number of additional shares to be delivered at the end of the four-year vesting period will be determined first on the basis of the CSG share price development (share price multiplier) and then on the basis of the CSG average ROE development (ROE multiplier). CSG shares are delivered shortly after the SISU base component and SISU leverage component vest. The number of additional shares per SISU was capped at a maximum of three times the grant date value, with a delivery of no more than three shares, prior to the application of the scaling factor, which can be as high as up to 2.5.

The fair value of the 2010 SISU base unit was CHF 50.30 and the fair value of the 2010 SISU leverage units was CHF 13.44.

Movements in the number of SISUs outstanding were as follows:

| | 2013 | | 2012 | |
|---|---|---|---|---|
| | **Base** | **Leverage** | **Base** | **Leverage** |
| **SISU Awards (USD million)** | | | | |

| **As at 31 December** | **0.30** | **0.73** | **0.60** | **0.91** |

### Incentive Share Unit ('ISU')

The Incentive Share Units ("ISUs") were the main form of share-based deferred compensation for all employees from 2006 to 2009. An ISU is similar to a share, but offers additional upside depending on the development of the CSG share price, compared to predetermined targets set on the grant date. For each ISU granted, the employee will receive at least one CSG share (ISU base unit) over a three-year period vesting and could receive additional shares (ISU leverage unit) at the end of the three-year vesting period. The number of ISU leverage units to be converted to additional shares is calculated by multiplying the total number of ISU base units granted, less forfeitures, by a share price multiplier. The share price multiplier is determined based on the actual increase in the weighted-average monthly share price during the contractual term of the award versus the share price at grant date. The ISU base unit vests equally on each of the three anniversaries of the grant date, whereas the ISU leverage units will only vest on the third anniversary of the grant date. Shares are delivered shortly after the ISU base units and the ISU leverage units vest.

In 2013, the ISU leverage units granted for 2009 were settled but did not have a value at settlement as the CSG share price performance was below the minimum predefined target of CHF 53.71. In 2012, the ISU leverage granted for 2008 were settled with a value for each outstanding leverage unit equivalent to 0.986 CSG shares.

Movements in the number of ISUs outstanding were as follows:

| **Group and Bank** | 2013 | | 2012 | |
|---|---|---|---|---|
| | **Base** | **Leverage** | **Base** | **Leverage** |

### 2008 Partner Asset Facility (‘PAF’)

As part of the 2008 annual compensation process, CSG granted certain employees the majority of the deferred compensation in the form of 2008 Partner Asset Facility (PAF) awards, denominated in US dollars The PAF awards are indexed to, and represent a first-loss interest in, a specified pool of illiquid assets (Asset Pool) that originated in Investment Banking.

The notional value of the Asset Pool was based on the fair market value of the assets within the Asset Pool on December 31, 2008, and those assets will remain static throughout the contractual term of the award or until liquidated. The PAF holders will participate in the potential gains on the Asset Pool if the assets within the pool are liquidated at prices above the initial fair market value. If the assets within the Asset Pool are liquidated at prices below the initial fair market value, the PAF holders will bear the first loss on the Asset Pool. As a result, a significant portion of risk positions associated with the Asset Pool has been transferred to the employees and removed from CSG’s risk-weighted assets, resulting in a reduction in capital usage.

The PAF awards, which have a contractual term of eight years, are fully vested. Each PAF holder will receive a semi-annual cash interest payment of LIBOR plus 250 basis points applied to the notional value of the PAF award granted throughout the contractual term of the award. Beginning in the fifth year after the grant date, the PAF holders will receive an annual cash payment equal to 20% of the notional value of the PAF awards if the fair market value of the Asset Pool in that year has not declined below the initial fair market value of the Asset Pool. In the final year of the contractual term, the PAF holders will receive a final settlement in cash equal to the notional value, less all previous cash payments made to the PAF holder, plus any related gains or less any related losses on the liquidation of the Asset Pool.

In June 2012 and December 2011, existing PAF holders were given a voluntary election to make a value-for- value exchange of their existing PAF awards for a new PAF award linked to an expanded portfolio of reference assets. The new PAF awards are subject to the same contractual term, vesting period, performance criteria, settlement and other terms and conditions as the original PAF awards and constitute an additional risk transfer to employees on the expanded portfolio of assets that was removed from CSG’s risk-weighted assets, resulting in a reduction in capital usage. Compensation expense for the new PAF awards will be updated at each reporting period date to reflect any change in the underlying fair value of the expanded portfolio of reference assets in addition to the original portfolio of PAF assets until the awards are finally settled. There was no impact on compensation expense on the exchange dates.

Total compensation expense recognised during the year ended December 31, 2013 was USD 11 million (2012: USD 21 million).

### Contingent Capital Awards

Contingent Capital Awards (‘CCA’) are a new form of award granted in January 2014 as part of 2013 deferred variable compensation and have rights and risks similar to those of certain contingent capital instruments issued by CSG in the market. CCA provide a conditional right to receive semi-annual cash payments of interest equivalents at a rate of 5.33% over the six-month US dollar London Interbank Offered Rate (‘LIBOR’) until settled. Employees who received compensation in Swiss francs could elect to receive CCA denominated in Swiss francs or US dollars, and all other employees received CCA denominated in US dollars.

CCA were awarded as deferred variable compensation to certain employees in place of share awards and will be expensed over the three-year period from the grant date.

CCA are scheduled to vest on the third anniversary of the grant date and will be expensed over three years from the grant date. However, because CCA qualify as additional tier 1 capital of CSG, the timing and form of distribution upon settlement is subject to approval by the Swiss Financial Market Supervisory Authority FINMA (FINMA). At settlement, employees will receive either a contingent capital instrument or a cash payment based on the fair value of the CCA. CSG will determine that fair value at its discretion. CSG intends to grant CCA as one of its annual deferred variable compensation awards in future years.

CCA have loss-absorbing features such that prior to settlement, the principal amount of the CCA would be written down to zero if any of the following trigger events were to occur:

- CSG's reported common equity tier 1 (CET1) ratio falls below 7%; or.
- FINMA determines that cancellation of the CCA and other similar contingent capital instruments is necessary, or that CSG requires public sector capital support, in either case to prevent it from becoming insolvent or otherwise failing.

## 31. Related Parties

The CSi group is controlled by CSG, its ultimate parent, which is incorporated in Switzerland. The CSi group's parent company, which holds a majority of the voting rights in the undertaking, is Credit Suisse AG, which is incorporated in Switzerland.

The CSi group has significant related party balances with subsidiaries and affiliates of CSG. These transactions largely comprise derivative trades, as the Bank is the principal risk taker for derivatives within the CS group, as well as funding trades via use of loans or deposits, repurchase or repurchase agreements. In addition, the ordinary, preference and participating shares are issued to CSG and subsidiaries of CSG, as outlined in Note 28 – Share Capital and Share Premium. The Bank is also charged for operating costs that mainly relate to employee-related services and other business expenses. Further, these transactions also include transfer pricing income/charges with CS group entities that provide services in respect of the global derivatives business which is centrally booked in the Bank.

The Bank generally enters into the above transactions in the ordinary course of business on market terms that could be obtained from unrelated parties.

In addition to the above, liabilities due to the CS group's own defined benefit pension funds as of 31 December 2013 of USD 13 million (2012: USD 274 million) are reflected in the CSi group's Consolidated Statement of Financial Position.

## c) Remuneration

### Disclosure required by the Companies Act 2006

### Remuneration of Directors

| | 2013 USD'000 | 2012 USD'000 |
|---|---|---|
| Emoluments | 2,342 | 2,619 |
| Long term incentive schemes: | | |
| ■ Amounts paid under Deferred Cash Awards | 2,050 | 4,020 |
| ■ Amounts delivered under Shared Based Awards | 5,729 | 4,894 |
| **Total** | **10,121** | **11,533** |
| Compensation for loss of office | 702 | 4,393 |
| Bank's contributions to defined contribution | 57 | 37 |
| Bank's contributions to defined benefit | 47 | 94 |
| Bank's contributions to defined benefits lump sum | 179 | - |
| **Total** | **11,106** | **16,057** |

Emoluments include amounts paid to or receivable by the Directors. Only vested Cash Retention Awards are included in emoluments. Long term incentive schemes consist of deferred cash awards and share based awards. Deferred cash awards are included in the period when the amounts vest and are paid, and share based awards are included in the period when the amounts vest and are delivered.

Where directors perform services for a number of companies within the CS group, the total remuneration payable to each director has been apportioned to the respective entities based on a time spent per company allocation for that director.

The aggregate of emoluments and deferred cash awards paid to or receivable by the highest paid director was USD 2,936,000 (2012: USD 5,073,000). The director was also a member of a defined contribution pension plan and the contribution paid during the year into the plan was USD 3,000 (2011: USD 11,000). Additionally a contribution was made for a defined benefit lump sum of USD 179,000 (2012: USD Nil). During the year the highest paid director also received an entitlement to shares under a long term incentive scheme.

The amounts included in the Companies Act disclosures are on a different basis than the recognition requirements of IFRS 2 and IAS 37 and the disclosure requirements of IAS 24. The aggregate amount of remuneration accrued in the Bank's accounts for directors in accordance with IFRS requirements for 2013 was USD 10,070,000 (2012: USD 15,915,000).

## d) Number of Directors and Benefits

| | 2013 | 2012 |
|---|---|---|
| **Number of Directors** | | |
| Retirement benefits are accruing to the following number of Directors under: | | |
| Defined contribution schemes | 3 | 2 |
| No scheme | 3 | 3 |
| Both defined contribution and defined benefit | 1 | 4 |
| | | |
| The number of Directors who exercised share options | - | - |
| | | |
| **Directors in respect of whom services were received or receivable under long term incentive schemes** | **7** | **9** |

## e) Remuneration of Key Management Personnel

| | 2013 | 2012 |
|---|---|---|
| **Remuneration of Key Management Personnel (USD' 000)** | | |
| Emoluments | 6,059 | 8,184 |
| Long term incentive schemes | 14,457 | 24,478 |
| **Total** | **20,516** | **32,662** |
| Compensation for loss of office | 541 | 5,293 |
| Bank's contributions to defined contribution | 161 | 85 |
| Bank's contributions to defined benefit | 82 | 158 |
| Bank's contributions to defined benefit Lump sum | 345 | - |
| **Total** | **21,645** | **38,198** |

The numbers disclosed in the 'Remuneration of Key Management Personnel' are based on amounts accrued in the financial statements for all emoluments and long term incentive schemes.

Where Key Management Personnel perform services for a number of companies within the CS group, the total remuneration payable to each key management person has been apportioned to the respective entities based on a time spent per company allocation for that key management person.

**CSG Shares awarded to Key Management Personnel**

| | 2013 | 2012 |
|---|---|---|
| Number of shares | 579,419 | 1,011,321 |

The shares included in the table are the shares accrued in the period under the requirements of IFRS 2. These numbers differ from the share awards included in the Company's Act disclosures above, which are disclosed in the period in which they vest and are delivered.

Key management personnel are those persons having authority and responsibility for planning, directing and controlling the activities of the CSi group, directly or indirectly, including any director of the CSi group.

Key management personnel include Directors and the members the UK Investment Bank Executive Committee (2012 the EMEA (Europe, Middle East and Africa) Operating Committee).

### f) Loans and Advances to Directors and Key Management Personnel

There were no loans outstanding to or due from Directors or key management personnel of the CSi group at 31 December 2013 (2012: USD Nil).

## 32. Employees

The average number of persons employed during the year was as follows:

| Group and Bank | 2013 | 2012 |
|---|---|---|
| Investment banking | 448 | 380 |
| Shared services | 279 | 439 |
| **Total** | **727** | **819** |

The CSi group receives a range of services from related companies, in particular from fellow subsidiary Credit Suisse Securities (Europe) Limited which is the primary Credit Suisse employing entity in the UK. The headcount related to these services cannot be accurately ascertained and is not therefore included in the above numbers. Staff costs and staff numbers do not differ between Bank and CSi group.

## 33. Derivatives and Hedging Activities

Derivatives are generally either privately negotiated OTC contracts or standard contracts transacted through regulated exchanges. The Bank's most frequently used freestanding derivative products, entered into for trading and risk management purposes, include interest rate, equity, cross currency and credit default swaps, interest rate and foreign currency options, foreign exchange forward contracts, and foreign currency and interest rate futures.

Furthermore, the Bank enters into contracts that are not considered derivatives in their entirety but include embedded derivatives features. Such transactions primarily include issued and purchased structured debt instruments where the return may be calculated by reference to an equity security, index, or third-party credit risk or that have non-standard or foreign currency terms.

On the date the derivative contract is entered into, the Bank designates the derivative as belonging to one of the following categories:

- a trading activity;
- a risk management transaction that does not qualify as a hedge under accounting standards (referred to as an economic hedge); or
- a hedge of the fair value of a recognised asset or liability.

### Trading Activities

The Bank is active in most of the principal trading markets and transacts in many popular trading and hedging products. As noted above, this includes the use of swaps, futures, options and structured products (custom transactions using combinations of derivatives) in connection with its sales and trading activities. Trading activities include market-making, positioning and arbitrage activities. The majority of the Bank's derivatives held as at 31 December 2013 were used for trading activities.

### Economic Hedges

Economic hedges arise when the CSi group enters into derivative contracts for its own risk management purposes, but the contracts entered into do not qualify for hedge accounting under IFRS. These economic hedges include the following types:

- interest rate derivatives to manage net interest rate risk on certain banking business assets and liabilities;
- foreign exchange derivatives to manage foreign exchange risk on certain banking business revenue and expense items, as well as on banking business assets and liabilities; and
- credit derivatives to manage credit risk on certain loan portfolios.

The following table sets forth details of trading derivatives instruments:

| Group | 2013 | | 2012 | |
|---|---|---|---|---|
| | **Positive replacement value** | **Negative replacement value** | **Positive replacement value** | **Negative replacement value** |
| **Trading derivatives instruments (USD million)** | | | | |
| Forwards and forward rate agreements | 1,743 | 1,792 | 1,997 | 1,960 |

## 34. Guarantees and Commitments

The following tables set forth details of contingent liabilities associated with guarantees and other commitments:

| Group and Bank | Maturity | | | | Total gross | Collateral | Net of |
|---|---|---|---|---|---|---|---|
| 31 December 2013 | <1 year | 1-3 years | 3-5 years | >5 years | amount | received | collateral |
| **Guarantees (USD million)** | | | | | | | |
| Credit guarantees and similar instruments | 827 | 662 | 68 | 50 | 1,608 | 552 | 1,056 |
| Performance guarantees and similar instruments | 4 | - | - | 10 | 14 | 14 | - |
| **Total guarantees** | **831** | **662** | **68** | **60** | **1,622** | **566** | **1,056** |

| Group and Bank | Maturity | | | | Total gross | Collateral | Net of |
|---|---|---|---|---|---|---|---|
| 31 December 2013 | <1 year | 1-3 years | 3-5 years | >5 years | amount | received | collateral |
| **Other commitments (USD million)** | | | | | | | |
| Irrevocable commitments under documentary credit | - | 20 | - | - | 20 | - | 20 |
| Loan commitments | 4,342 | 3,190 | 2,031 | 38 | 9,601 | 5,920 | 3,681 |
| Other Commitments - Commitments to purchase cash securities <1 year | 2,878 | - | - | - | 2,878 | - | 2,878 |
| **Total other commitments** | **7,220** | **3,210** | **2,031** | **38** | **12,499** | **5,920** | **6,579** |

| Group and Bank | Maturity | | | | Total gross | Collateral | Net of |
|---|---|---|---|---|---|---|---|
| 31 December 2012 | <1 year | 1-3 years | 3-5 years | >5 years | amount | received | collateral |
| **Guarantees (USD million)** | | | | | | | |
| Credit guarantees and similar instruments | 204 | 659 | - | - | 863 | 19 | 844 |
| Performance guarantees and similar instruments | 3 | 92 | - | - | 95 | - | 95 |
| **Total guarantees** | **207** | **751** | **-** | **-** | **958** | **19** | **939** |

| Group and Bank | Maturity | | | | Total gross | Collateral | Net of |
|---|---|---|---|---|---|---|---|
| 31 December 2012 | <1 year | 1-3 years | 3-5 years | >5 years | amount | received | collateral |
| **Other commitments (USD million)** | | | | | | | |
| Irrevocable commitments under documentary credit | 7 | 25 | - | - | 32 | - | 32 |
| Loan commitments | 5,732 | 4,633 | 1,516 | 19 | 11,900 | 52 | 11,848 |
| Other Commitments - Commitments to purchase cash securities <1 year | 3,262 | - | - | - | 3,262 | - | 3,262 |
| **Total other commitments** | **9,001** | **4,658** | **1,516** | **19** | **15,194** | **52** | **15,142** |

Credit guarantees are contracts that require the CSi group to make payments, should a third party fail to do so under a specified existing credit obligation. For example, in connection with its corporate lending business and other corporate activities, the CSi group provides guarantees to counterparties in the form of standby letters of credit, which represent obligations to make payments to third parties if the counterparty fails to fulfill its obligation under a borrowing arrangement or other contractual obligation.

Performance guarantees and similar instruments are arrangements that require contingent payments to be made when certain performance-related targets or covenants are not met. Such covenants may include a customer's obligation to deliver certain products and services or to perform under a construction contract. Performance-related guarantees are frequently executed as part of project finance transactions.

Loan commitments include unused credit facilities that cannot be revoked at any time without prior notice.

Commitment to purchase cash securities represents the value of debt and equity cash security contracts which requires CSi group to make payments to customers, banks, brokers and dealers which have not settled as at the reporting date.

### Lease Commitments

The following table sets forth details of future minimum operating lease commitments under non-cancellable operating leases:

| Group and Bank | 2013 | 2012 |
|---|---|---|
| **Operating lease commitments (USD million)** | | |
| Up to 1 year | 107 | 105 |
| From 1 year and no later than 5 years | 426 | 423 |
| From 5 years and over | 1,181 | 1,286 |
| **Future operating lease commitments** | **1,714** | **1,814** |
| Less minimum non-cancellable sublease rentals | (106) | (145) |
| **Total net future minimum operating lease commitments** | **1,608** | **1,669** |

The future operating lease commitments include service charges of USD 22 million (2012: USD 17.2 million).

The following table sets forth details of rental expenses for all operating leases:

| Group and Bank | 2013 | 2012 |
|---|---|---|
| **Net rental expense (USD million)** | | |
| Minimum rentals | 106 | 100 |
| Sublease rental income | (89) | (88) |
| **Total net rental expenses** | **17** | **12** |

### Contingent Liabilities and Other Commitments

The Bank is party to various legal proceedings as part of its normal course of business. The Directors of the Bank believe that the aggregate liability, if any, resulting from these proceedings will not materially prejudice the financial position of the Bank and have been provided for where deemed necessary or in accordance with accounting policy.

In July 2013, the Directorate General for Competition of the European Commission ('DG Comp') issued a Statement of Objections ('SO') to various entities of thirteen CDS dealer banks, certain Markit entities and the International Swaps and Derivatives Association, Inc. ('ISDA') in relation to its investigation into possible violations of competition law by certain CDS market participants. Certain Credit Suisse entities were among the named bank entities, including CSi. The SO marks the commencement of enforcement proceedings in respect of what DG Comp alleges were unlawful attempts to prevent the development of exchange traded platforms for CDS between 2006 and 2009. The next step in the process is for the named entities to provide written responses. In addition, certain Credit Suisse entities, as well as other banks, have been named in civil litigation in the US. Further, Credit Suisse (USA), Inc. has received civil investigative demands from the United States Department of Justice.

CSi is the defendant in English court litigation brought by Rosserlane Consultants Limited and Swinbrook Developments Limited (the "claimants"). The litigation relates to the forced sale by CSi in 2008 of Caspian Energy Group LP ('CEG'), the vehicle through which the claimants held a 51% stake in the Kyurovdag oil and gas field in Azerbaijan. CEG was sold for USD 245 million following two unsuccessful M&A processes. The claimants allege that CEG should have been sold for at least USD 700 million. CSi will be vigorously defending the claims, which it believes are without merit. The trial is fixed to commence in October 2014.

## 35. Securitisations, Special Purpose Entities and Other Structured Transactions

### Consolidated SPEs

The CSi group is involved in the formation of Special Purpose Entities ('SPEs') primarily for the purpose of providing clients with structured investment opportunities, asset securitisation transactions and for buying or selling credit protection. The CSi group consolidates SPEs when the substance of the relationship between the CSi group and the SPE indicates that the SPE is controlled by the CSi group. Consideration is given to the CSi group's ability to control the activities of the SPE and the CSi group's exposure to the risks and benefits of the SPE.

| **Group** | **2013** | **2012** |
|---|---|---|
| **SPE exposures (USD million)** | | |
| **Consolidated SPEs** | | |
| CDO | - | - |
| Financial intermediation | 1,475 | 1,649 |
| **Total assets of consolidated SPEs (excluding those held with bank)** | **1,475** | **1,649** |

The aggregate Statement of Financial Positions at 31 December 2012 included the consolidation of China A Share Fund. CSi held 80% of the total units of the fund and the remaining 20% were held by Credit Suisse Securities (Europe) Limited. In 2012 CSi group consolidated the entire fund and the remaining equity not attributable to the CSi group is represented by noncontrolling interest for 2012.

### Non-consolidated SPEs

| **Group and Bank** | **2013** | **2012** |
|---|---|---|
| **SPE exposures (USD milion)** | | |
| **Non-consolidated SPEs**[1] | | |
| CDO | 395 | 4,146 |
| Financial intermediation | 15,805 | 24,154 |
| **Total assets of non-consolidated SPEs** | **16,200** | **28,300** |
| | | |
| **Total maximum exposure to loss of non-consolidated SPEs** | | |
| CDO | 4 | 14 |
| Financial intermediation | 2,326 | 2,510 |

[1]Certain unconsolidated SPEs have not been included in the table including SPEs structured by third parties in which the CSi group's interest is in the form of securities held in the CSi group's inventory, certain single-asset financing vehicles not sponsored by the CSi group to which the CSi group provides financing but has very little risk of loss due to over-collateralisation and guarantees, failed sales where the CSi group does not have any other holdings and other entities out of scope.

The non-consolidated SPEs table provides the carrying amounts and classification of the assets and liabilities recorded in the CSi group's Consolidated Statement of Financial Position, maximum exposure to loss and total assets of the non-consolidated SPEs.

Maximum exposure to loss represents non-consolidated SPEs that are recorded by the CSi group (for example, direct holdings in vehicles, loans and other receivables), as well as notional amounts of guarantees and off-balance sheet commitments which are variable interests that have been extended to non-consolidated SPEs. Such amounts, particularly notional amounts of derivatives and guarantees, do not represent the anticipated losses in connection with these transactions as they do not take into consideration the effect of collateral, recoveries or the probability of loss. In addition, they exclude the effect of offsetting financial instruments that are held to mitigate these risks and have not been reduced by unrealised losses previously recorded by the CSi group in connection with guarantees or derivatives.

Non-consolidated SPE assets are related to the non-consolidated SPEs with whom the CSi group has interests. These amounts represent the assets of the exposures the CSi group has with the entity and thus are not amounts that are considered for risk management purposes.

The non-consolidated SPEs are SPEs where CSi has a continuing involvement with the SPE (including both CSi and third party sponsored) and does not have the majority of the risks and rewards of ownership.

The Bank considers all possible trigger events which could impact upon the control of consolidated and unconsolidated SPEs as set out in Note 3 – Critical Accounting Estimates and Judgements in Applying Accounting Policies.

The aggregate Statement of Financial Positions value (including amounts held with the Bank) in relation to Consolidated SPEs is shown below.

| Group | 2013 | 2012 |
|---|---|---|
| **Assets (USD million)** | | |
| Cash and due from banks | 163 | 137 |
| Other financial assets designated at fair value through profit or loss | - | 174 |
| Trading assets | 1,488 | 1,387 |
| Investment property | 466 | 518 |
| Current tax assets | - | - |
| Other assets | - | 4 |
| Property and equipment | - | 15 |
| **Total assets** | **2,117** | **2,235** |
| | | |
| **Liabilities (USD million)** | | |
| Deposits | 142 | 128 |
| Trading liabilities | 271 | 331 |
| Short term borrowings | 38 | - |
| Other financial liabilities designated at fair value through profit or loss | 1,664 | 1,775 |
| Other liabilities | - | 11 |
| Share capital | 2 | (32) |
| Subsidiaries acquired in the year | - | 22 |
| **Total liabilities** | **2,117** | **2,235** |

## 36. Financial Instruments

The disclosure of the CSi group's financial instruments below includes the following sections:

- Analysis of financial instruments by categories;
- Fair value measurement (including fair value hierarchy; transfers between levels; level 3 reconciliation; qualitative and quantitative disclosures of valuation techniques; sensitivity analysis of unobservable input parameters; and recognition of trade date profit);
- Fair value of financial instruments not carried at fair value.

### Analysis of financial instruments by categories

Financial instruments are measured on an ongoing basis either at fair value or at amortised cost. The following table sets out the carrying amounts and fair values of the CSi group's financial instruments.

## Financial assets and liabilities by categories

| 31 December 2013 | | | Carrying value | | | Total fair value |
|---|---|---|---|---|---|---|
| **Group (USD million)** | **Total carrying value** | **Held for trading** | **Designated at fair value** | **Loans and receivables** | **Other amortised cost** | |
| **Financial assets** | | | | | | |
| Cash and due from banks | 27,280 | - | - | - | 27,280 | 27,280 |
| Interest-bearing deposits with banks | 285 | - | - | - | 285 | 285 |
| Securities purchased under resale agreements and securities borrowing transactions | 21,698 | - | - | - | 21,698 | 21,698 |
| Trading financial assets at fair value through profit or loss | 393,957 | 393,957 | - | - | - | 393,957 |

## Fair value measurement

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction in the principal (or most advantageous) market at the measurement date. A significant portion of the CSi group's financial instruments are carried at fair value. Deterioration of financial markets could significantly impact the fair value of these financial instruments and the results of operations.

The fair value of the majority of the CSi group's financial instruments is based on quoted prices in active markets or observable inputs. These instruments include government and agency securities, certain CP, most investment grade corporate debt, certain high yield debt securities, exchange-traded and certain OTC derivative instruments and most listed equity securities.

In addition, the CSi group holds financial instruments for which no prices are available and which have little or no observable inputs. Further deterioration of financial markets could significantly impact the value of these financial instruments and the results of operations. For these instruments, the determination of fair value requires subjective assessment and varying degrees of judgment, depending on liquidity, concentration, pricing assumptions, the current economic and competitive environment and the risks affecting the specific instrument. In such circumstances, valuation is determined based on management's own assumptions about the assumptions that market participants would use in pricing the asset or liability, including assumptions about risk. These instruments include certain OTC derivatives, including equity and credit derivatives, certain corporate equity-linked securities, mortgage-related and Collateralised Debt Obligation ('CDO') securities, private equity investments, certain loans and credit products, including leveraged finance, certain syndicated loans and certain high yield bonds.

The fair value of financial assets and liabilities is impacted by factors such as benchmark interest rates, prices of financial instruments issued by third parties, commodity prices, foreign exchange rates and index prices or rates. In addition, valuation adjustments are an integral part of the valuation process when market prices are not indicative of the credit quality of a counterparty, and are applied to both OTC derivatives and debt instruments. The impact of changes in a counterparty's credit spreads (known as credit valuation adjustments) is considered when measuring the fair value of assets and the impact of changes in the CSi group's own credit spreads (known as debit valuation adjustments) is considered when measuring the fair value of its liabilities. For OTC derivatives, the impact of changes in both the CSi group's and the counterparty's credit standing is considered when measuring their fair value, based on current Credit Default Swap ('CDS') prices. The adjustments also take into account contractual factors designed to reduce the CSi group's credit exposure to counterparty, such as collateral held and master netting agreements. For hybrid debt instruments with embedded derivative features, the impact of changes in the CSi group's credit standing is considered when measuring their fair value, based on current funded debt spreads.

IFRS 13 permits a reporting entity to measure the fair value of a group of financial assets and financial liabilities on the basis of the price that would be received to sell a net long position or paid to transfer a net short position for a particular risk exposure in an orderly transaction between market participants at the measurement date. This is consistent with industry practice. As such, the CSi group applies bid and offer adjustments to net portfolios of cash securities and/or derivative instruments to adjust the value of the net position from a mid-market price to the appropriate bid or offer level that would be realised under normal market conditions for the net long or net short position for a specific market risk. In addition, the CSi group reflects the net exposure to credit risk for its derivative instruments where the CSi group has legally enforceable agreements with its counterparties that mitigate credit risk exposure in the event of default. Valuation adjustments are recorded in a reasonable and consistent manner that results in an allocation to the relevant disclosures in the notes to the financial statements as if the valuation adjustment had been allocated to the individual unit of account.

As a result of adopting IFRS 13 on 1 January 2013, the CSi group changed its valuation methodology and marked positions where the CSi group is a market maker to the mid-price, resulting in a $104million credit to the income statement.

## Fair value hierarchy

The financial instruments carried at fair value were categorised under the three levels of the fair value hierarchy as follows:

- Level 1: Quoted market prices (unadjusted) in active markets for identical assets or liabilities that the CSi group has the ability to access. This level of the fair value hierarchy provides the most reliable evidence of fair value and is used to measure fair value whenever available.
- Level 2: Inputs other than quoted prices included within level 1 that are observable for the asset or liability, either directly or indirectly. These inputs include: (i) quoted prices for similar assets or liabilities in active markets; (ii) quoted prices for identical or similar assets or similar liabilities in markets that are not active, that is, markets in which there are few transactions for the asset and liability, the prices are not current or price quotations vary substantially either over time or among market makers, or in which little information is publicly available; (iii) inputs other than quoted prices that are observable for the asset or liability; or (iv) inputs that are derived principally from or corroborated by observable market data by correlation or other means.
- Level 3: Inputs for the asset or liability that are not based on observable market date (significant unobservable inputs). These inputs reflect the CSi group's own assumptions about the assumptions that market participants would use in pricing the asset or liability (including assumptions about risk). These inputs are developed based on the best information available in the circumstances, which includes the CSi group's own data. The CSi group's own data used to develop unobservable inputs is adjusted if information indicates that market participants would use different assumptions.

## Transfers between Level 1 and Level 2

| Group and Bank (USD million) | 2013 | | 2012 | |
|---|---|---|---|---|
| **Assets** | **Transfers out of level 1 to level 2** | **Transfers to level 1 out of level 2** | **Transfers out of level 1 to level 2** | **Transfers to level 1 out of level 2** |
| Trading financial assets at fair value through profit or loss | 23 | 4,962 | 276 | 4,967 |
| **Total transfers in assets at fair value** | **23** | **4,962** | **276** | **4,967** |
| | | | | |
| **Liabilities** | | | | |
| Trading financial liabilities at fair value through profit or loss | 1 | 3,918 | 8 | 5,128 |
| **Total transfers in liabilities at fair value** | **1** | **3,918** | **8** | **5,128** |

The transfers from Level 1 to Level 2 were mainly driven by debt/equity securities where the liquidity had decreased and subsequently lacked pricing transparency. All transfers were reported at the end of the reporting period.

The transfers from Level 2 to Level 1 are mainly driven by the transfer of exchange traded options as they moved closer to maturity and inputs become observable. All transfers were reported at the end of the reporting period.

### Movements of level 3 instruments

The following table presents a reconciliation of financial instruments categorised in level 3 of the fair value hierarchy.

### Assets and liabilities measured at fair value on a recurring basis for Level 3

| As at December 2013 | | | | | | | | Trading revenues | | |
|---|---|---|---|---|---|---|---|---|---|---|
| Group | Balance at beginning of period | Transfers in | Transfers out | Purchases | Sales | Issuances | Settlements | On transfers in/out[1] | On all other | Balance at end of period |

[1] For all transfers to level 3 or out of level 3, the CSi group determines and discloses as level 3 events only gains or losses through the last day of the reporting period.

### Gains and losses on assets and liabilities measured at fair value on a recurring basis using significant unobservable inputs (Level 3)

| Group and Bank | | |
|---|---|---|
| **Trading revenues (USD million)** | **2013** | **2012** |
| **Net realised/unrealised (losses)/gains included in net revenues** | **(1,007)** | **(1,642)** |
| Whereof: | | |
| Changes in unrealised (losses)/gains relating to assets and liabilities still held as of the reporting date | | |
| Trading financial assets at fair value through profit or loss | 473 | 15 |
| Financial assets designated at fair value through profit or loss | 297 | 130 |
| Trading financial liabilities at fair value through profit or loss | (1,055) | (635) |
| Financial liabilities at fair value through profit or loss | (491) | (685) |
| **Total changes in unrealised gains/(losses) relating to assets and liabilities still held as of the reporting date** | **(776)** | **(1,175)** |

Both observable and unobservable inputs may be used to determine the fair value of positions that have been classified within Level 3. As a result, the unrealised gains and losses from assets and liabilities within Level 3 presented in the table above may include changes in fair value that were attributable to both observable and unobservable inputs.

The CSi group employs various economic hedging techniques in order to manage risks, including risks in Level 3 positions. Such techniques may include the purchase or sale of financial instruments that are classified in Levels 1 and/or 2. The realised and unrealised gains and losses for assets and liabilities in Level 3 presented in the table above do not reflect the related realised or unrealised gains and losses arising on economic hedging instruments classified in Levels 1 and/or 2.

### Transfers in and out of level 3

### Trading financial assets at fair value through profit or loss

Trading financial assets transferred into and out of level 3 as at 31 December 2013 amounted to USD 2,835 million and USD (2,934) million, respectively. USD 1,801 million of transfers into level 3 were related to credit derivatives and loans. Transfers out of level 3 largely comprised of credit and equity derivatives.

Trading financial assets transferred into and out of level 3 in 2012 amounted to USD 1,748 million and USD 5,971 million, respectively. Approximately USD 1,256 million of transfers into level 3 were related to derivatives. Transfers out of level 3 largely comprised debt/equity securities.

### Financial assets designated at fair value through profit or loss

Financial assets designated at fair value through profit or loss transferred into and out of level 3 in 2013 amounted to USD 127 million and USD (142) million, respectively. Both these amounts of transfers were related to loans.

Financial assets designated at fair value through profit or loss transferred into and out of level 3 in 2012 amounted to USD 54 million and USD (263) million, respectively. These were primarily related to loans.

### Trading financial liabilities at fair value through profit or loss

Trading financial liabilities transferred into and out of level 3 as at 31 December 2013 amounted to USD 1,390 million and USD (1,440) million, respectively. USD 1,097 million of transfers into level 3 were related to credit derivatives. Transfers out of level 3 largely comprised of equity/index related derivatives and credit derivatives.

Trading financial liabilities transferred into and out of level 3 in 2012 amounted to USD 1,460 million and USD (2,490) million, respectively. These were predominantly driven by derivative products.

### Financial liabilities designated at fair value through profit or loss

Financial liabilities designated at fair value through profit or loss transferred into and out of level 3 as at 31 December 2013 amounted to USD 228 million and USD (52) million, respectively. These were largely related to structured notes.

Financial liabilities designated at fair value through profit or loss transferred into and out of level 3 in 2012 amounted to USD 245 million and USD (847) million, respectively. USD 143 million of transfers into level 3 and USD (646) million of transfers out of level 3 were related to structured notes over two years.

## Qualitative disclosures of valuation techniques

The CSi group has implemented and maintains a valuation control framework, which is supported by policies and procedures that define the principles for controlling the valuation of the CSi group's financial instruments. Product Control and Risk Management create, review and approve significant valuation policies and procedures. The framework includes three main internal processes: (i) valuation governance; (ii) independent price verification and significant unobservable inputs review; and (iii) a cross-functional pricing model review. Through this framework, the CSi group determines the reasonableness of the fair value of its financial instruments.

On a monthly basis, meetings are held for each business line with senior representatives of the Front Office and Product Control to discuss independent price verification results, valuation adjustments, and other significant valuation issues. On a quarterly basis, a review of significant changes in the fair value of financial instruments is undertaken by Product Control and conclusions are reached regarding the reasonableness of those changes. Additionally, on a quarterly basis, meetings are held for each business line with senior representatives of the Front Office, Product Control, Risk Management, and Financial Accounting to discuss independent price verification results, valuation issues, business and market updates, as well as a review of significant changes in fair value from the prior quarter, significant unobservable inputs and prices used in valuation techniques, and valuation adjustments.

The results of these meetings are aggregated for presentation to the Valuation and Risk Management Committee ('VARMC') and the Audit Committee. The VARMC, which is comprised of Credit Suisse Group AG's Executive Board members and the heads of the business and control functions, meets to review and ratify valuation review conclusions, and to resolve significant valuation issues for the CSi group. Oversight of the valuation control framework is through specific and regular reporting on valuation directly to the Credit Suisse Group AG's Executive Board through the VARMC.

One of the key components of the governance process is the segregation of duties between the Front Office and Product Control. The Front Office is responsible for measuring inventory at fair value on a daily basis, while Product Control is responsible for independently reviewing and validating those valuations on a periodic basis. The Front Office values the inventory using, wherever possible, observable market data which may include executed transactions, dealer quotes, or broker quotes for the same or similar instruments. Product Control validates this inventory using independently sourced data that also includes executed transactions, dealer quotes, and broker quotes.

Product Control utilises independent pricing service data as part of their review process. Independent pricing service data is analysed to ensure that it is representative of fair value including confirming that the data corresponds to executed transactions or executable broker quotes, review and assessment of contributors to ensure they are active market participants, review of statistical data and utilisation of pricing challenges. The analysis also includes understanding the sources of the pricing service data and any models or assumptions used in determining the results. The purpose of the review is to judge the quality and reliability of the data for fair value measurement purposes and its appropriate level of usage within the Product Control independent valuation review.

For certain financial instruments the fair value is estimated in full or in part using valuation techniques based on assumptions that are not supported by market observable prices, rates, or other inputs. In addition, there may be uncertainty about a valuation, which results from the choice of valuation technique or model used, the assumptions embedded in those models, the extent to which inputs are not market observable, or as a consequence of other elements affecting the valuation technique or model. Model calibration is performed when significant new market information becomes available or at a minimum on a quarterly basis as part of the business review of significant unobservable inputs for level 3 instruments.

For models that have been deemed to be significant to the overall fair value of the financial instrument, model validation is performed as part of the periodic review of the related model.

The CSi group performs a sensitivity analysis of its significant level 3 financial instruments. This sensitivity analysis estimates a fair value range by changing the related significant unobservable inputs value. Where a model-based technique is used to determine the fair value of the level 3 financial instrument, an alternative input value is utilised to derive an estimated fair value range. Where a price-based technique is used to determine the fair value of the level 3 financial instrument, Front Office professional judgment is used to estimate a fair value range.

The following information on the valuation techniques and significant unobservable inputs of the various financial instruments, and the sensitivity of fair value measurements to changes in significant unobservable inputs, should be read in conjunction with the table "Quantitative disclosure of valuation techniques".

### Central bank funds sold, securities purchased under resale agreements and securities borrowing transactions

Securities purchased under resale agreements and securities sold under repurchase agreements are measured at fair value using discounted cash flow analysis. Future cash flows are discounted using observable market interest rate repurchase/resale curves for the applicable maturity and underlying collateral of the instruments. As such, the significant majority of both securities purchased under resale agreements and securities sold under repurchase agreements are included in level 2 of the fair value hierarchy. Structured resale and repurchase agreements include embedded derivatives, which are measured using the same techniques as described below for stand-alone derivative contracts held for trading purposes or used in hedge accounting relationships. If the value of the embedded derivative is determined using significant unobservable inputs, those structured resale and repurchase agreements are classified within level 3 of the fair value hierarchy. The significant unobservable input for those classified as level 3 is mean reversion funding spread.

Securities purchased under resale agreements are usually fully collateralised or over collateralised by government securities, money market instruments, corporate bonds, or other debt instruments. In the event of counterparty default, the collateral service agreement provides the Group with the right to liquidate the collateral held.

### Debt securities

#### Foreign governments and corporates

Government debt securities typically have quoted prices in active markets and are categorised as level 1 instruments. For debt securities for which market prices are not available, valuations are based on yields reflecting credit rating, historical performance, delinquencies, loss severity, the maturity of the security, recent transactions in the market or other modeling techniques, which may involve judgment. Those securities where the price or model inputs are observable in the market are categorised as level 2 instruments, while those securities where prices are not observable and significant model inputs are unobservable are categorised as level 3 of the fair value hierarchy.

Corporate bonds are priced to reflect current market levels either through recent market transactions or broker or dealer quotes. Where a market price for the particular security is not directly available, valuations are obtained based on yields reflected by other instruments in the specific or similar entity's capital structure and adjusting for differences in seniority and maturity, benchmarking to a comparable security where market data is available (taking into consideration differences in credit, liquidity and maturity), or through the application of cash flow modeling techniques utilising observable inputs, such as current interest rate curves and observable CDS spreads. Significant unobservable inputs may include price, buyback probability, correlation, volatility and credit spread. For securities using market comparable price, the differentiation between level 2 and level 3 is based upon the relative significance of any yield adjustments as well as the accuracy of the comparison characteristics (i.e., the observable comparable security may be in the same country but a different industry and may have a different seniority level – the lower the comparability the more likely the security will be level 3). Generally, the interrelationship between volatility and correlation is positively correlated.

### Equity securities

The majority of the CSi group's positions in equity securities are traded on public stock exchanges for which quoted prices are readily and regularly available and are therefore categorised as level 1 instruments. Level 2 and level 3 equities include fund-linked products, convertible bonds or equity securities with restrictions that are not traded in active markets. Significant unobservable inputs may include earnings before interest, taxes, depreciation and amortisation, ('EBITDA') multiple, discount rate and capitalisation rate.

### Derivatives

Derivatives held for trading purposes or used in hedge accounting relationships include both OTC and exchange-traded derivatives. The fair values of exchange-traded derivatives measured using observable exchange prices are included in level 1 of the fair value hierarchy. For exchange-traded derivatives where the volume of trading is low, the observable exchange prices may not be considered executable at the reporting date. These derivatives are valued in the same manner as similar observable OTC derivatives and are included in level 2 of the fair value hierarchy. If the similar OTC derivative used for valuing the exchange-traded derivative is not observable, than the exchange-traded derivative is included in level 3 of the fair value hierarchy.

The fair values of OTC derivatives are determined on the basis of either industry standard models or internally developed proprietary models. Both model types use various observable and unobservable inputs in order to determine fair value. The inputs include those characteristics of the derivative that have a bearing on the economics of the instrument. The determination of the fair value of many derivatives involves only a limited degree of subjectivity because the required inputs are observable in the marketplace, while more complex derivatives may use unobservable inputs that rely on specific proprietary modeling assumptions. Where observable inputs (prices from exchanges, dealers, brokers or market consensus data providers) are not available, attempts are made to infer values from observable prices through model calibration (spot and forward rates, mean reversion, benchmark interest rate curves and volatility inputs for commonly traded option products). For inputs that cannot be derived from other sources, estimates from historical data may be made. OTC derivatives where the majority of the value is derived from market observable inputs are categorised as level 2 instruments, while those where the majority of the value is derived from unobservable inputs are categorised as level 3 of the fair value hierarchy.

The CSi group's valuation of derivatives does not include an adjustment for the cost of funding uncollateralised OTC derivatives due to a lack of clear observability in the marketplace.

### Interest rate derivatives

OTC vanilla interest rate products, such as interest rate swaps, swaptions, and caps and floors are valued by discounting the anticipated future cash flows. The future cash flows and discounting are derived from market standard yield curves and industry standard volatility inputs. Where applicable, exchange-traded prices are also used to value exchange-traded futures and options and can be used in yield curve construction. For more complex products, inputs include, but are not limited to correlation, volatility, volatility skew, prepayment rate, credit spread, basis spread and mean reversion.

### Foreign exchange derivatives

Foreign exchange derivatives include vanilla products such as spot, forward and option contracts where the anticipated discounted future cash flows are determined from foreign exchange forward curves and industry standard optionality modeling techniques. Where applicable, exchange-traded prices are also used for futures and option prices. For more complex products inputs include, but are not limited to prepayment rate, correlation, volatility, volatility skew, mean reversion and credit spread.

### Equity and index-related derivatives

Equity derivatives include vanilla options and swaps in addition to different types of exotic options. Inputs for equity derivatives can include correlation, volatility, skew, buyback probability and gap risk. Generally, volatility, forward skew, correlation and credit spreads are positively correlated.

### Credit derivatives

Credit derivatives include index and single name CDSs in addition to more complex structured credit products. Vanilla products are valued using industry standard models and inputs that are generally market observable including credit spread and recovery rate.

Complex structured credit derivatives are valued using proprietary models requiring unobservable inputs such as recovery rate, credit spread, correlation and price. These inputs are generally implied from available market observable data. Fair values determined by price may include discounted cash flow models using the inputs default rate, loss severity and discount rate.

### Loans

The CSi group's loan portfolio which is measured at fair value primarily consists of commercial and industrial loans, loans to government and public institutions, and loans to financial institutions. These categories, include commercial loans, real estate loans, corporate loans, leverage finance loans and emerging market loans. Fair value is based on recent transactions and quoted prices, where available. Where recent transactions and quoted prices are not available, fair value may be determined by relative value benchmarking (which includes pricing based upon another position in the same capital structure, other comparable loan issues, generic industry credit spreads, implied credit spreads derived from CDS for the specific borrower, and enterprise valuations) or calculated based on the exit price of the collateral, based on current market conditions.

Both the funded and unfunded portion of revolving credit lines on the corporate lending portfolio are valued using a CDS pricing model, which requires estimates of significant inputs including credit spreads, recovery rates, credit conversion factors, and weighted average life of the loan. Significant unobservable inputs may include credit spread and price.

### Short-term borrowings and long-term debt

The CSi group's short-term borrowings and long-term debt include structured notes (hybrid financial instruments that are both bifurcatable and non-bifurcatable), funded derivatives and vanilla debt. The fair value of structured notes is based on quoted prices, where available. When quoted prices are not available, fair value is determined by using a discounted cash flow model incorporating the CSi group's credit spreads, the value of derivatives embedded in the debt and the residual term of the issuance based on call options. Derivatives structured into the issued debt are valued consistently with the CSi group's stand-alone derivative contracts held for trading purposes or used in hedge accounting relationships as discussed above. The fair value of structured debt is heavily influenced by the combined call options and performance of the underlying derivative returns. Significant unobservable inputs for long-term debt include buyback probability, gap risk, correlation, volatility, credit spread and price. Generally, volatility, correlation and gap risk are positively correlated.

### Other financial liabilities designated at fair value through profit or loss

### Failed sales

These liabilities represent securitisations that do not meet the criteria for sale treatment under IFRS. Failed sales are valued in a manner consistent with the related underlying financial instruments.

### Short-term financial instruments

Certain short-term financial instruments are not carried at fair value on the statement of financial position, but a fair value has been disclosed in the table "Financial assets and liabilities by categories". These instruments include: cash and due from banks, cash collateral receivables and payables and other receivables and payables arising in the ordinary course of business. For these financial instruments, the carrying value approximates the fair value due to the relatively short period of time between their origination and expected realisation, as well as the minimal credit risk inherent in these instruments

### Sensitivity of fair value measurements to changes in significant unobservable inputs

For level 3 assets with a significant unobservable input of buyback probability, gap risk, prepayment rate, correlation, recovery rate, price, volatility, volatility skew, mean reversion, discount rate, default rate and loss severity in general, an increase in the significant unobservable input would increase the fair value. For level 3 assets instruments with a significant unobservable input of basis spread and credit spread, in general, an increase in the significant unobservable input would decrease the fair value.

For level 3 liabilities an increase in the related significant unobservable inputs would have the inverse impact on fair value. Except for the significant unobservable input skew, where an increase in the significant unobservable input would decrease the fair value.

### Interrelationships between significant unobservable inputs

Except as noted above, there are no material interrelationships between the significant unobservable inputs for the financial instruments. As the significant unobservable inputs move independently, generally an increase or decrease in one significant unobservable input will have no impact on the other significant unobservable inputs.

## Quantitative information about level 3 assets and liabilities at fair value

The following tables provide the representative range of minimum and maximum values and the associated weighted average of each significant unobservable input for level 3 assets and liabilities by the related valuation technique most significant to the related financial instrument.

**As at December 2013**

| Group (USD million, except as indicated) | Fair Value | Valuation technique | Unobservable input | Minimum value | Maximum value | Weighted average |
|---|---|---|---|---|---|---|
| **Assets at fair value** | | | | | | |
| **Debt securities** | **1,562** | | | | | |

| | | | Credit spread, in bp | 81 | 1,241 | 1,236 |

The ‘Quantitative information about level 3 assets and liabilities at fair value’ table applies to both Group and Bank, with the exception of the following adjusted line item in respect of Assets at fair value - Other (trading loan that is eliminated on consolidation from the Group table).

**As at December 2013**

| Bank | Fair Value | Valuation technique | Unobservable input | Minimum value | Maximum value | Weighted average |
|---|---|---|---|---|---|---|
| **Assets at fair value (USD million)** | | | | | | |
| **Other** | **1,440** | | | | | |
| of which trading loans | | | | | | |
| of which | 887 | Discounted cash flow | Credit spread, in bp | 393 | 393 | 393 |
| | | | Capitalization rate, in % | 9 | 9 | 9 |
| of which | 553 | Market comparable | Price, in % | 1 | 51 | 50 |

## Qualitative discussion of the ranges of significant unobservable inputs

The following sections provide further information about the ranges of significant unobservable inputs included in the tables above. The level of aggregation and diversity within the financial instruments disclosed in the tables above result in certain ranges of significant inputs being wide and unevenly distributed across asset and liability categories.

### Discount rate

The discount rate is the rate of interest used to calculate the present value of the expected cash flows of a financial instrument. There are multiple factors that will impact the discount rate for any given financial instrument including the coupon on the instrument, the term and the underlying risk of the expected cash flows. Two instruments of similar term and expected cash flows may have significantly different discount rates because the coupons on the instruments are different.

### Default rate and loss severity

For financial instruments backed by residential real estate or other assets, diversity in the portfolio is reflected in a wide range for loss severity due to varying levels of default. The lower end of the range represents high performing or government guaranteed collateral with a low probability of default or guaranteed timely payment of principal and interest while the higher end of the range relates collateral with a greater risk of default.

### Credit spread and recovery rate

For financial instruments where credit spread is the significant unobservable input, the wide range represents positions with varying levels of risk. The lower end of the credit spread range typically represents shorter-dated instruments and/or those with better perceived credit risk. T he higher end of the range typically comprises longer-dated financial instruments or those referencing non-performing, distressed or impaired reference credits. Similarly, the spread between the reference credit and an index can vary significantly based on the risk of the instrument. The spread will be positive for instruments that have a higher risk of default than the index (which is based on a weighted average of its components) and negative for instruments that have a lower risk of default than the index.

Similarly, recovery rates can vary significantly depending upon the specific assets and terms of each transaction. Transactions with higher seniority or more valuable collateral will have higher recovery rates while those transactions which are more subordinated or with less valuable collateral will have lower recovery rates.

### Correlation

There are many different types of correlation inputs, including credit correlation, cross-asset correlation (such as equity-interest rate correlation), and same-asset correlation (such as interest rate-interest rate correlation). Correlation inputs are generally used to value hybrid and exotic instruments. Generally, same-asset correlation inputs have a narrower range than cross-asset correlation inputs. However, due to the complex and unique nature of these instruments, the ranges for correlation inputs can vary widely across portfolios.

### Prepayment rate

Prepayment rates may vary between collateral pools, and are driven by a variety of collateral-specific factors, including the type and location of the underlying borrower, the remaining tenor of the obligation and the level and type (e.g., fixed or floating) of interest rate being paid by the borrower.

### Volatility and skew

Volatility and skew are impacted by the underlying risk, term and strike price of the derivative. In the case of interest rate derivatives, volatility rates may vary significantly between different underlying currencies and expiration dates on the options. Similarly, equity derivatives' volatility may vary greatly depending upon the underlying reference name on the derivative.

### Sensitivity of fair values to reasonably possible alternative assumptions

The fair value of certain financial instruments recognised in the consolidated financial statements is dependent in part or fully upon unobservable parameters which may include market inputs, prices or other data. The following table summarises the sensitivity of these financial instruments to reasonable changes in the assumptions underlying these parameters:

| **Group** | **As at 31 December 2013** | | **As at 31 December 2012** | |
|---|---|---|---|---|
| | **Favourable changes** | **Unfavourable changes** | **Favourable changes** | **Unfavourable changes** |
| **Impact on net income/(loss) (USD million)** | | | | |
| Derivative assets and liabilities | 295 | (336) | 381 | (452) |
| Assets-backed securities, loans and derivatives | 61 | (56) | 121 | (112) |
| Debt and equity securities | 112 | (63) | 99 | (69) |
| Loans | 34 | (34) | 71 | (76) |
| **Total** | **502** | **(489)** | **672** | **(709)** |

| **Bank** | **As at 31 December 2013** | | **As at 31 December 2012** | |
|---|---|---|---|---|
| | **Favourable changes** | **Unfavourable changes** | **Favourable changes** | **Unfavourable changes** |
| **Impact on net income/(loss) (USD million)** | | | | |
| Derivative assets and liabilities | 295 | (336) | 381 | (452) |
| Assets-backed securities, loans and derivatives | 61 | (56) | 121 | (112) |
| Debt and equity securities | 112 | (63) | 99 | (69) |
| Loans | 57 | (57) | 99 | (104) |
| **Total** | **525** | **(512)** | **700** | **(737)** |

When the fair value of an instrument has multiple unobservable inputs, there is assumed to be no correlation between those inputs, as such the total sensitivity reflected in the table may be larger than if correlation had been included in the analysis. The analysis also ignores any correlation between the different categories of financial instruments listed in the table. The percentage upward and downward movement that the unobservable inputs are subjected to are based on management judgement.

Derivative assets and liabilities include primarily equity, credit and interest rate derivatives. The primary parameters subjected to sensitivity analysis included correlations, volatilities and credit spreads. Correlation sensitivities for equity and interest rate positions were subjected to equal movements up and down. The movements varied by product and existing levels of correlation based upon management judgment. Volatility sensitivities are predominantly equity volatilities and are generally subjected to a 5% to

10% movement up and down. Credit spread sensitivities were subjected to generally equal movements up and down based upon management judgment and underlying market conditions.

Asset backed securities, loans and derivatives include CMBS, ABS CDO and balance guaranteed swap positions. CMBS sensitivities are calculated by subjecting the prices of the positions to a 5% movement up and down. ABS CDO positions were subjected to sensitivities to underlying asset prices, as well as recovery rates on the underlying assets. The underlying asset prices were subjected to a range of downward movements with no movement up. Recovery rates are held at what management believes to be conservative levels and were increased by 10% resulting in favourable uncertainty. Balance guaranteed swap positions were subjected to sensitivities on prepayment speeds which were estimated based on management's assessment of fast/slow notional bands for movements up and down.

Debt and equity securities include equity fund linked products, variable funding notes and corporate and emerging market bonds. The primary parameters subjected to sensitivity analysis for equity fund linked products and variable funding notes include gap risk. Gap risk sensitivity is estimated by using limited pricing service information and valuing to the conservative side of the range of values. The parameter subjected to sensitivity for emerging market positions is price. Price sensitivity is subjected to a 100 basis point movement up and down. The parameter subjected to sensitivity for corporate debt is credit spreads and are generally subjected to a 15% movement up and down.

Loans include emerging market loans and corporate loans. For emerging market loans the parameter subjected to sensitivity analysis is credit spreads which is subjected to a 15% movement up and down. For corporate loans the parameter subjected to sensitivity analysis is the loan price which is subjected to an equal movement up and down which ranges from 5 to 10 points depending upon the position.

### Nonrecurring fair value changes

Certain assets and liabilities are measured at fair value on an on non-recurring basis; that is, they are not measured at fair value on an ongoing basis but are subject to fair value adjustments in certain circumstances, for example, when there is evidence of impairment. The CSi group typically uses non-financial assets measured at fair value on a recurring or non-recurring basis in a manner that reflects their highest and best use.

### Nonrecurring fair value changes

| Group (USD millions) | 2013 | 2012 |
|---|---|---|
| **Investment property** | **466** | **518** |
| Of which level 2 | 466 | 518 |

### Recognition of trade date profit

If there are significant unobservable inputs used in the valuation technique, the financial instrument is recognised at the transaction price and any profit implied from the valuation technique at trade date is deferred over the life of the contract or until the fair value is expected to become observable.

The following table sets out the aggregate difference yet to be recognised in profit or loss at the beginning and end of year with a reconciliation of the changes of the balance during the year:

| Group and Bank | 2013 | 2012 |
|---|---|---|
| **Deferred trade date profit (USD million)** | | |
| Balance at the beginning of period | 394 | 433 |
| Increase due to new trades | 99 | 175 |
| Reduction due to passage of time | (52) | (37) |
| Reduction due to redemption, sales, transfers or improved observability | (58) | (177) |
| **Balance at the end of period** | **383** | **394** |

### Fair Value of financial instruments not carried at fair value

IFRS requires the disclosure of the fair value of financial instruments not carried at fair value in the Consolidated Statements of Financial Position. IFRS also requires the disclosure of the fair values of these financial instruments within the fair value hierarchy.

### Fair Value of financial instruments not recognised at fair value by level of fair value hierarchy

**As at 31 December 2013**

| Group (USD million) | Level 1 | Level 2 | Level 3 | Total at fair value |
|---|---|---|---|---|
| **Financial assets** | | | | |
| Cash and due from banks | 27,169 | 111 | - | 27,280 |
| Interest-bearing deposits with banks | - | 285 | - | 285 |
| Securities purchased under resale agreements and securities borrowing transactions | - | 21,698 | - | 21,698 |
| Other loans and receivables | - | 2,761 | 1,689 | 4,450 |
| Other investments | - | - | 34 | 34 |
| Other assets | - | 39,407 | 131 | 39,538 |
| **Total fair value of financial assets** | **27,169** | **64,262** | **1,854** | **93,285** |
| **Financial liabilities** | | | | |
| Deposits | 2,489 | 2,843 | - | 5,332 |
| Securities sold under repurchase agreements and securities lending transactions | - | 5,036 | - | 5,036 |
| Short term borrowings | - | 15,624 | - | 15,624 |
| Long term debt | - | 21,395 | - | 22,338 |
| Other financial liabilities | - | 38,761 | 823 | 39,584 |
| **Total fair value of financial liabilities** | **2,489** | **83,659** | **823** | **87,914** |

**As at 31 December 2013**

| Bank (USD million) | Level 1 | Level 2 | Level 3 | Total at fair value |
|---|---|---|---|---|
| **Financial assets** | | | | |
| Cash and due from banks | 27,006 | 111 | - | 27,117 |
| Interest-bearing deposits with banks | - | 285 | - | 285 |
| Securities purchased under resale agreements and securities borrowing transactions | - | 21,698 | - | 21,698 |
| Other loans and receivables | - | 2,761 | 1,689 | 4,450 |
| Other investments | - | - | 34 | 34 |
| Other financial assets | - | 39,395 | 131 | 39,526 |
| **Total fair value of financial assets** | **27,006** | **64,250** | **1,854** | **93,110** |
| **Financial liabilities** | | | | |
| Deposits | 2,489 | 2,843 | - | 5,332 |
| Securities sold under repurchase agreements and securities lending transactions | - | 5,036 | - | 5,036 |
| Short term borrowings | - | 15,624 | - | 15,624 |
| Long term debt | - | 21,395 | - | 21,395 |
| Other financial liabilities | - | 38,743 | 823 | 39,566 |
| **Total fair value of financial liabilities** | **2,489** | **83,641** | **823** | **86,953** |

## 37. Assets Pledged or Assigned

The following table sets forth details of assets pledged or assigned:

| Group and Bank | 2013 | 2012 |
|---|---|---|
| **Assets pledged or assigned (USD million)** | | |
| Trading financial assets at fair value through profit or loss | 22,951 | 33,761 |
| **Collateral received (USD million)** | | |
| Fair value of collateral received with the right to resell or repledge | 32,923 | 40,251 |
| ▪ Of which sold or repledged | 18,405 | 26,381 |

Assets pledged or assigned represents the balance sheet position of trading assets at fair value through profit or loss which have been pledged as collateral under securities sold under repurchase agreements, securities lending transactions and derivatives transactions. Refer to Note 15 – Trading Financial Assets and Liabilities at Fair Value Through Profit or Loss for the amount of securities transferred which are encumbered.

As at 31 December 2013 and 2012, collateral was received in connection with resale agreements, securities borrowings and loans, derivative transactions and margined broker loans. As at these dates, a substantial portion of the collateral received by the CSi group had been sold or repledged in connection with repurchase agreements, securities sold not yet purchased, securities lent, pledges to clearing organisations, segregation requirements under securities laws and regulations, derivative transactions and bank loans.

These transactions were generally conducted under terms that are usual and customary for standard securitised lending activities and the other transactions described. The CSi group, as the secured party, has the right to sell or repledge such collateral, subject to the CSi group returning equivalent securities upon completion of the transaction.

The CSi group enters into agreements with counterparties where collateral or security interests in positions, which the CSi group holds, has been provided. This includes situations where the CSi group has registered charges to certain counterparties over the CSi groups assets in connection with its normal operating activities.

## 38. Derecognition

In the normal course of business, the CSi group enters into transactions where it transfers previously recognised financial assets, such as debt securities, equity securities and other financial instruments. The CSi group's accounting policy regarding derecognition of such assets under IAS 39 is described in Note 2 – Significant Accounting Policies.

### Transferred Financial Assets that are derecognised with continuing involvement

Where the transfer of a financial asset meets the derecognition criteria under IAS 39, the CSi group may have continuing involvement in a financial asset that has been derecognised. The continuing involvement can take several forms, including but not limited to derivative instruments and debt instruments issued by SPEs to which the asset has been transferred. In addition, the CSi group does not have a continuing involvement in a transferred financial asset if, as part of the transfer, the CSi group neither retains any of the contractual rights or obligations inherent in the transferred financial asset nor acquires any new contractual rights or obligations relating to the transferred financial asset. The CSi group does not have continuing involvement in a transferred financial asset if it has neither an interest in the future performance of the transferred financial asset nor a responsibility under any circumstances to make payments in respect of the transferred financial asset in the future. The CSi group's exposure resulting from continuing involvement in a transferred asset is generally limited to where the CSi group retains any form of rights or obligations relating to the transferred asset.

The table below provides information for the transfer of financial assets that qualify for sale accounting and subsequent derecognition, in which the CSi group still has continuing involvement as at 31 December 2013, irrespective of the date when the transfer occurred. The maximum exposure to loss from continuing involvement represents the maximum exposure before taking into account the amount of any collateral held against the continuing involvement.

## Information on transferred assets by type of continuing involvement

**2013**

| Group and Bank (USD million) | Carrying amount of continuing involvement in statement of financial position | | Fair value of continuing involvement | | Maximum exposure to loss | Loss from transfer | Income / Expense from continuing involvement | |
|---|---|---|---|---|---|---|---|---|
| | Trading financial assets at fair value through profit or loss | Trading financial liabilities at fair value through profit or loss | Assets | Liabilities | | | For the year ended 31 December 2013 | Cumulative to 31 December 2013 |
| **Type of continuing involvement** | | | | | | | | |
| Derivatives | | | | | | | | |
| ■ Swaps | 168 | (10) | 168 | (10) | 168 | (12) | (15) | 114 |
| Notes | 120 | - | 120 | - | 120 | - | -[1] | 17 |
| **Total** | **288** | **(10)** | **288** | **(10)** | **288** | **(12)** | **(15)** | **131** |

**2012**

| Group and Bank (USD million) | Carrying amount of continuing involvement in statement of financial position | | Fair value of continuing involvement | | Maximum exposure to loss | Loss from transfer | Income / Expense from continuing involvement | |
|---|---|---|---|---|---|---|---|---|
| | Trading financial assets at fair value through profit or loss | Trading financial liabilities at fair value through profit or loss | Assets | Liabilities | | | For the year ended 31 December 2012 | Cumulative to 31 December 2012 |
| **Type of continuing involvement** | | | | | | | | |
| Derivatives | | | | | | | | |
| ■ Swaps | 213 | (24) | 213 | (24) | 213 | (38) | (76) | 154 |
| Notes | 122 | - | 122 | - | 122 | - | -[1] | 19 |
| **Total** | **335** | **(24)** | **335** | **(24)** | **335** | **(38)** | **(76)** | **173** |

The majority of the CSi Group's continuing involvement in derecognised transferred financial assets is in the form of derivative transactions. To reduce its credit risk to derivatives, the CSi group enters into legally enforceable netting agreements with its derivative counterparties. Collateral on these derivative contracts is usually posted on a net counterparty basis.

The following table shows a maturity analysis of undiscounted cash outflows that the CSi group may be required to pay to repurchase the asset or any other amounts payable (such as dividends and interest payable) to the counterparty. The below table includes situations where the CSi group has an

[1] The expenses from involvement (year-to-date) for Notes is USD 6,951 but shown as Nil as the statement is presented in USD million.

option to repurchase the asset. In such instances, where the timing of the cash flows is not specified, the total undiscounted amount has been included in the earliest maturity bucket in the disclosure below. Cash outflows to the counterparty may be triggered by credit events.

### Maturity analysis of undiscounted cash flows to repurchase transferred assets by type of continuing involvement

**2013**

| Group and Bank (USD million) | Total | on demand | Less than 1year | 1 – 5 years | More than 5 years |
|---|---|---|---|---|---|
| **Type of continuing involvement** | | | | | |
| Derivatives[1] | | | | | |
| ▪ Swaps | (310) | (310) | - | - | - |

**2012**

| Group and Bank (USD million) | Total | on demand | Less than 1year | 1 – 5 years | More than 5 years |
|---|---|---|---|---|---|
| **Type of continuing involvement** | | | | | |
| Derivatives[1] | | | | | |
| ▪ Swaps | (1,179) | (1,179) | - | - | - |

Instruments that are considered to be continuing involvement are included in Note – 15 Trading Financial Assets and Liabilities at Fair Value Through Profit and Loss and Note 27 Long Term Debt.

[1] The derivative provides CSi group the right but not the obligation to repurchase the transferred asset at the CSi group's option.

### Transferred Financial Assets that are not derecognised in their entirety

Certain transactions may include provisions that prevent derecognition of the transferred financial asset and the transfers are accounted for as secured financing transactions. Repurchase agreements, securities lending agreements and total return swaps, in which the CSi group retains substantially all of the associated credit, market, interest rate and foreign exchange risks and rewards associated with the assets, represent the most common examples of such transactions. Where the transfer of an asset does not meet derecognition, it remains on the CSi groups balance sheet with a corresponding liability established to represent an obligation to the counterparty. As part of the CSi group's repurchase agreements and securities lending transactions, there is an obligation to return equivalent securities at the end of the transaction.

The following table provides details of financial assets which have been sold or otherwise transferred, but which do not qualify for derecognition, together with their associated liabilities.

### Carrying amount of transferred assets not derecognised and associated liabilities

| Group and Bank (USD million) | 2013 | | 2012 | |
|---|---|---|---|---|
| Financial assets not derecognised due to the following transactions | Carrying amount of assets | Carrying amount of associated liabilities | Carrying amount of assets | Carrying amount of associated liabilities |
| Repurchase & Securities lending agreements | 15,212 | 15,212 | 16,691 | 16,588 |
| Total return swaps | 853 | 833 | 1,681 | 1,610 |
| Other | 482 | 482 | 519 | 519 |

The CSi group also participates in securities lending agreements where the counterparty provides securities as collateral or fees. The carrying amount of the assets not derecognised in such transactions is equal to USD 3,310 million.

Where the CSi group sells the contractual rights to the cash flows of the securities included above, it does not have the ability to use the transferred assets during the term of the arrangement.

The counterparties to the associated liabilities included above, have full recourse to CSi.

Assets not derecognised are included in Note – 15 Trading Financial Assets and Liabilities at Fair Value Through Profit or Loss and the corresponding liabilities are included in Note – 14 Securities Borrowed, Lent and Subject to Resale or Repurchase Agreements and Note – 16 Financial Assets and Liabilities Designated at Fair Value Through Profit or Loss.

Of the above, other financial assets not derecognised includes failed sale items including fair value elected items which are shown under Financial assets designated at fair value through profit or loss in the Consolidated Statement of Financial Position.

## 39. Financial Instruments Risk Position

### Risks Detail

### i) Market risk

#### Overview

Market risk is the risk of loss arising from adverse changes in interest rates, foreign currency exchange rates, equity prices, commodity prices and other relevant parameters, such as market volatility. The Bank defines its market risk as potential changes in the fair values of financial instruments in response to market movements. A typical transaction may be exposed to a number of different market risks.

The Bank has policies and processes in place to ensure that market risk is captured, accurately modelled and reported, and effectively managed. Trading and non-trading portfolios are managed at various organisational levels, from the overall risk positions at the Bank level down to specific portfolios. The Bank uses market risk measurement and management methods in line with industry standards. These include general tools capable of calculating comparable exposures across the Bank's many activities and focused tools that can specifically model unique characteristics of certain instruments or portfolios. The tools are used for internal market risk management, internal market risk reporting and external disclosure purposes. The principal measurement methodologies are value-at-risk ('VaR') and scenario analysis. Additionally, the Bank's market risk exposures are reflected in the ERC calculations. The risk management techniques and policies are regularly reviewed to ensure they remain appropriate.

#### Value-at-Risk

VaR measures the potential loss in terms of fair value of financial instruments due to adverse market movements over a defined time horizon at a specified confidence level. VaR as a concept is applicable for all financial risk types with valid regular price histories. Positions are aggregated by risk type rather than by product. For example, interest rate risk includes risk arising from money market and swap transactions, bonds, and interest rate, foreign exchange, equity and commodity options. The use of VaR allows the comparison of risk in different businesses, such as fixed income and equity, and also provides a means of aggregating and netting a variety of positions within a portfolio to reflect actual correlations and offsets between different assets.

Historical financial market rates, prices and volatility serve as a basis for the statistical VaR model underlying the potential loss estimation. The Bank uses a ten-day holding period and a confidence level of 99% to model the risk in its trading portfolios. These assumptions are compliant with the standards published by the Basel Committee on Banking Supervision ('BCBS') and other related international standards for market risk management. For some purposes, such as backtesting and benchmarking with competitors, the resulting VaR figures are scaled down or calculated to a one-day holding period level. A one-day holding period and a 99% confidence level mean that, within a one-day horizon, losses exceeding the VaR figure should occur, on average under normal market conditions, not more than once every hundred days.

The Bank uses a historical simulation model for the majority of risk types and businesses within its trading portfolios. Where insufficient data is available for such an approach, an 'extreme-move' methodology is used. The model is based on the profit or loss distribution resulting from historical changes in market rates, prices and volatility applied to evaluate the portfolio. This methodology also avoids any explicit assumptions on correlation between risk factors. The Bank uses a three-year historical dataset to compute VaR. To ensure that VaR responds appropriately in times of market stress, the Bank uses a scaling technique that automatically increases VaR where the short-term market volatility is higher than the long-term volatility in the three year dataset. This results in a more responsive VaR model, as the impact of changes in overall market volatility is reflected almost immediately in the VaR model.

The Bank has approval from the PRA to use its regulatory VaR model in the calculation of trading book market risk capital requirements, and the model is subject to regular reviews by the regulator.

The VaR model uses assumptions and estimates that the Bank believes are reasonable, but changes to assumptions or estimates could result in a different VaR measure. As a risk measure, VaR only quantifies the potential loss on a portfolio under normal market conditions. Other risk measures, such as scenario analysis, are used to estimate losses associated with unusually severe market movements. The main assumptions and limitations of VaR as a risk measure are:

- VaR relies on historical data to estimate future changes in market conditions, which may not capture all potential future outcomes, particularly where there are significant changes in market conditions, such as increases in volatilities.
- Although VaR captures the interrelationships between risk factors, these interrelationships may break down during stressed market conditions.
- VaR provides an estimate of losses at a 99% confidence level, which means that it does not provide any information on the size of losses that could occur beyond that confidence threshold.
- VaR is based on either a ten-day (for internal risk management and regulatory purposes) or one-day (for backtesting purposes) holding period. This assumes that risks can be either sold or hedged over that period, which may not be possible for all types of exposure, particularly during periods of market illiquidity or turbulence.
- VaR is calculated using positions held at the end of each business day and does not include intra-day exposures.

### Scenario analysis

Stress testing complements other risk measures by capturing the Bank's exposure to unlikely but plausible events, which can be expressed through a range of significant moves across multiple financial markets. The majority of scenario analysis calculations performed are specifically tailored toward the risk profile within particular businesses, and limits may be established if they are considered the most appropriate control. In addition, to identify areas of risk concentration and potential vulnerability to stress events at Bank level, a set of scenarios are used which are consistently applied across all businesses and assess the impact of significant, simultaneous movements across a broad range of markets and asset classes.

Stress testing is a fundamental element of the Bank's risk control framework, stress testing results are used in risk appetite discussions and strategic business planning, and support the Bank's internal capital adequacy assessment. Stress test scenarios are conducted on a regular basis and the results, trend information and supporting analysis are reported to the Board, senior management and the business lines.

The Bank's stress testing framework is governed through a dedicated steering committee that operates across CS group. Scenarios can be defined with reference to historic events or based on forward looking, hypothetical events that could impact the Bank's positions, capital, or profitability. The scenarios are reviewed and updated as markets and business strategies evolve, and new scenarios are designed by the Risk division in collaboration with Global Research and the business divisions.

## Trading portfolios

### Risk measurement and management

Market risk arises in CSi's trading portfolios primarily through the trading activities of the Investment Banking business lines.

For the purposes of this disclosure, VaR is used to quantify market risk in the trading portfolio, which includes those financial instruments treated as part of the trading book for the Bank's regulatory capital purposes. This classification of assets as trading is done for the purpose of analysing the Bank's market risk exposure, not for financial statement purposes.

CSi is active in most of the principal trading markets of the world, using the majority of common trading and hedging products, including derivatives such as swaps, futures, options and structured products (some of which are customised transactions using combinations of derivatives and executed to meet specific client or proprietary needs). As a result of CSi's broad participation in products and markets, trading strategies are correspondingly diverse and exposures are generally spread across a range of risk factors and locations.

### Development of trading portfolio risks

The table below shows the trading related market risk exposure for the Bank, as measured by ten-day 99% VaR. The VaR in the table has been calculated using a three-year historical dataset. VaR estimates are computed separately for each risk type and for the whole portfolio using the historical simulation methodology. The diversification benefit reflects the net difference between the sum of the 99th percentile loss for each individual risk type and for the total portfolio. There is no material difference in VaR between the Bank and the CSi group.

### Ten-day, 99% VaR – trading portfolios

| End of period | Interest rate and credit spread | Foreign exchange | Commodity | Equity | Diversification benefit[1)] | Total |
|---|---|---|---|---|---|---|
| **2013 USD million** | | | | | | |
| Average | 73 | 17 | 8 | 21 | (62) | 57 |
| Minimum | 34 | 6 | 2 | 11 | - | 26 |
| Maximum | 124 | 43 | 19 | 86 | - | 113 |
| End of period | 35 | 15 | 6 | 21 | (39) | 38 |
| **2012 USD million** | | | | | | |
| Average | 101 | 23 | 11 | 34 | (77) | 92 |
| Minimum | 75 | 5 | 2 | 19 | -[2)] | 46 |
| Maximum | 139 | 70 | 29 | 83 | -[2)] | 150 |
| End of period | 97 | 15 | 10 | 40 | (93) | 69 |

1) VaR estimates are calculated separately for each risk type and for the whole portfolio using the historical simulation methodology. Diversification benefit reflects the net difference between the sum of the 99% percentile loss.

2) As the minimum and maximum occur on different days for different risk types, it is not meaningful to calculate a portfolio diversification benefit.

### VaR results

The CSi group's ten-day, 99% regulatory VaR as of 31 December 2013 decreased by 45% to USD 38 million, compared to 31 December 2012 (USD 69 million).

### Banking portfolios

### Risk measurement and management

The market risks associated with the non-trading portfolios are measured, monitored and limited using several tools, including ERC, scenario analysis, sensitivity analysis and VaR. For the purpose of this disclosure, the aggregated market risks associated with the Bank's non-trading portfolios are measured using sensitivity analysis. The sensitivity analysis for the non-trading activities measures the amount of potential change in economic value resulting from specified hypothetical shocks to market factors. It is not a measure of the potential impact on reported earnings in the current period, since the non-trading activities generally are not marked to market through earnings. Foreign exchange translation risk is not included in this analysis.

### Development of non-trading portfolio risks

Foreign exchange risk related to expenses and net assets is centrally and systematically managed with a focus on risk reduction and diversification. Risk is monitored and managed at the CSi group level through the levelling of accrued profit or losses which are incurred in a currency other than the CSi group's presentation currency. Any non-presentation currency denominated profit or loss of the CSi group is systematically leveled against the CSi group's presentation currency during or immediately after the month so that foreign exchange risks on accrued profit or loss are fully eliminated at month-end.

The CSi group has approval to manage its own trading profit or loss related foreign exchange risk through a formal trading mandate and has established defined risk limits.

Interest rate risk on banking book positions is shown below using sensitivity analysis that estimates the potential change in value resulting from defined changes in interest rate yield curves. The impact of a one-basis-point parallel move in yield curves on the fair value of interest rate-sensitive non-trading book positions would be USD 1 million as of 31 December 2013 compared to USD 2 million as of 31 December 2012. Non-trading interest rate risk is assessed using other measures including the potential value change resulting from a significant change in yield curves. As of 31 December 2013, the fair value impacts of 200-basis-point move in yield curves (flooring at zero where appropriate) were:

+200bps increase of USD 205 million (2012: increase of USD 549 million)

-200bps decrease of USD 155 million (2012: decrease of USD 14 million)

The fair value impact of a statistical one-year adverse interest rate move (to 99% confidence level) was a decrease of USD 73 million. Both measures are significantly below the 20% threshold used by regulators to identify firms that potentially run excessive levels of non-trading interest rate risk.

Equity risk on non-trading positions is measured using sensitivity analysis that estimates the potential change in value resulting from a 10% decline in the equity markets of developed nations and a 20% decline in the equity markets of emerging market nations. The estimated impact of this scenario would have been a decrease of approximately USD 2 million in the value of the non-trading portfolio as of 31 December 2013 and USD 15 million as of 31 December 2012.

Commodity risk on non-trading positions is measured using sensitivity analysis that estimates the potential change in value resulting from a 20% weakening in commodity prices. The estimated impact of this scenario would have been a decrease of approximately USD Nil in the value of the non-trading portfolio as of 31 December 2013 compared to USD Nil million as of 31 December 2012.

### ii) Liquidity Risk

Liquidity risk is the risk that a company is unable to fund assets and meet obligations as they fall due under both normal and stressed market conditions.

#### CS group-wide management of liquidity risk

Liquidity, as with funding, capital and foreign exchange exposures, is centrally managed by Treasury. Oversight of these activities is provided by the Capital Allocation and Risk Management Committee ('CARMC'), a committee that includes the Chief Executive Officers ('CEOs') of the CS group and the divisions, the Chief Financial Officer ('CFO'), the Chief Risk Officer ('CRO') and Treasurer.

The liquidity and funding strategy is approved by CARMC with ultimate responsibility residing with the Board of Directors. The implementation and execution of the funding and liquidity strategy is managed by Treasury for adherence to the funding policy and the efficient coordination of the secured funding desks. The liquidity and funding profile is regularly reported to CARMC and the Board of Directors, who define the Bank's risk tolerance and set parameters for the balance sheet usage of businesses.

The liquidity and funding profile of Credit Suisse AG ('CS') reflects the risk appetite, business activities, strategy, the markets and overall operating environment. CS's liquidity and funding policy is designed to ensure that funding is available to meet all obligations in times of stress, whether caused by market events and/ or issues specific to CS. This approach enhances CS's ability to manage potential liquidity and funding risks and to promptly adjust the liquidity and funding levels to meet stress situations.

The funding sourced by CS is part of an Asset-Liability Management ('ALM') strategy aimed at maintaining a funding structure with long term stable funding sources being in excess of illiquid assets. CS primarily funds the balance sheet through core customer deposits, long-term debt and shareholders' equity.

To address short term liquidity needs a portfolio of highly liquid securities and cash is maintained. This liquidity buffer is managed to sustain operations for an extended period of time in the event of a crisis.

The targeted funding profile is designed to enable CS to continue to pursue activities for an extended period of time without changing business plans during times of stress. The principal measure used to monitor the structural liquidity position of the firm and as the basis for funds transfer pricing policy is the Net Stable Funding Ratio ('NSFR'). This is complemented by CS's internal liquidity barometer, which allows CS to manage the time horizon over which the adjusted market value of unencumbered assets (including cash) exceeds the aggregate value of contractual outflows of unsecured liabilities plus a conservative forecast of anticipated contingent commitments. This framework is supplemented by the modeling of additional stress events and additional liquidity risk measurement tools.

In the event of a liquidity crisis, CS would activate its Contingency Funding Plan ('CFP'), which focuses on the specific actions that would be taken in the event of a crisis, including a detailed communication plan for creditors, investors and customers.

The contingency plan would be activated by the Funding Execution Committee ('FEC'), which includes senior business line, funding and finance department management adapted to include the relevant stakeholders depending upon the degree and nature of stress. This committee would meet frequently throughout the crisis to ensure that the plan is executed.

On regulatory developments, the BCBS issued the Basel III international framework for liquidity risk measurement, standards and monitoring. The framework includes a liquidity coverage ratio ('LCR') and a net stable funding ratio ('NSFR'). The BCBS has stated that it will review the effect of these liquidity standards on financial markets, credit extension and economic growth to address unintended consequences.

The LCR, which will be phased in beginning 1 January 2015 through 1 January 2019, following an observation period which began in 2011, addresses liquidity risk over a 30-day period. The LCR aims to ensure that banks have a stock of unencumbered high-quality liquid-assets available to meet liquidity needs for a 30-day time horizon under a severe stress scenario. The LCR is comprised of two components: the value of the stock of high quality liquid assets in stressed conditions and the total net cash outflows calculated according to specified scenario parameters. The ratio of liquid assets over net cash outflows is subject to an initial minimum requirement of 60%, which will increase by 10% for four years, reaching 100% by 1 January 2019.

The NSFR, which is expected to be introduced on 1 January 2018 following an observation period which began in 2012, establishes criteria for a minimum amount of stable funding based on the liquidity of a bank's assets and activities over a one-year horizon. The NSFR is intended to ensure banks maintain a structurally sound long-term funding profile beyond one year and is a complementary measure to the LCR. The standard is defined as the ratio of available stable funding over the amount of required stable funding and should always be at least 100%.

### Legal entity management of liquidity risk

The liquidity risk of CSi is managed as an integral part of the overall CS global liquidity risk management framework. CSi aims to achieve a prudent approach in the management of liquidity to ensure it can meet its obligations as they fall due. The core liquidity adequacy analysis used for CSi is aligned to those used globally for the CS barometer.

The legal entity internal liquidity risk management framework also includes local regulatory compliance requirements. Such compliance requirements are measured as part of the Prudential Regulation Authority's Individual Liquidity Guidance ('ILG') which results in CSi holding term funding and a local liquid asset buffer of qualifying securities.

Following global regulatory developments, the European Banking Association ('EBA') has published its version of the LCR and NSFR as part of the implementation guidance for Basel III. In line with guidelines published by BCBS, the LCR will be subject to an initial minimum requirement of 60% on January 1, 2015 with full compliance by January 1, 2018 (one year prior to BCBS guidelines). The NSFR is expected to be introduced on January 1, 2018.

In the context of liquidity management at the legal entity, the Bank's Board is responsible for setting the liquidity risk appetite and liquidity risk tolerance limits. Some of the key characteristics determining CSi's liquidity risk management approach include, but are not limited to:

- Board approved legal entity risk tolerance;
- Compliance with local regulatory requirements;
- Funding of illiquid assets on a term basis;
- Holding a liquid asset portfolio composed of highly liquid unencumbered assets;
- The liquidity value of assets, liabilities and the calibration of contingent liabilities being aligned with the CS global liquidity risk methodologies.

CSi has implemented a liquidity risk management framework including legal entity governance, systems and controls and frequent management information to measure, monitor and manage liquidity risk.

The UK IB Board approves the liquidity risk tolerance and assumptions underlying the relevant stress tests on at least an annual basis.

The legal entity risk tolerance and assumptions underlying the relevant stress tests, which form part of CSi's liquidity risk management framework, are reviewed by Treasury and ultimately approved by the Bank's Board of Directors on at least an annual basis or as market conditions dictate.

Treasury is responsible for maintaining a CFP that details specific dealing strategies, actions and responsibilities required depending upon severity of the crisis. Treasury supports the plan with key liquidity tools, including early warning indicators. The CFP gives consideration to the impact of operational constraints in terms of time and ability to monetise assets, trapped liquidity, daylight collateral requirements and communicated strategies.

Incremental to CSi's unsecured funding sources from CS, CSi has the ability to access secured funding markets via repurchase agreements and a structured notes issuance programme. These funding streams provide diversification to the funding profile of the entity.

The following table sets out details of the remaining contractual maturity of all financial liabilities.

| **Group**<br>**31 December 2013** | **On Demand** | **Due within 3 months** | **Due between 3 and 12 months** | **Due between 1 and 5 years** | **Due after 5 years** | **Total** |
|---|---|---|---|---|---|---|
| **Financial liabilities (USD million)** | | | | | | |
| Deposits | - | 775 | 2,210 | 929 | 1,418 | 5,332 |
| Securities sold under repurchase agreements and securities lending transactions | - | 1,601 | 1,964 | - | 1,471 | 5,036 |
| Trading financial liabilities at fair value through profit or loss | 366,098 | - | - | - | - | 366,098 |

Liabilities in trading portfolios have not been analysed by contractual maturity because these liabilities are used to risk manage positions held across CS group and can be closed out at very short notice. Trading liabilities have been classified as being 'on demand' at their fair value.

For instruments with perpetual features (no maturity dates) the projected coupons have been excluded. Callable deposits, open ended positions and overnight funding will be recorded at their present value in an 'on demand' categorisation. This classification will be based on the underlying legal and contractual ability of the counterparty or CSi to put or call the positions at short notice.

**iii) Currency Risk**

The Bank takes on exposure to the effects of fluctuations in the prevailing foreign currency exchange rates on its financial position and cash flows.

The Bank has approval to manage its own trading P&L related FX risk through a formal trading mandate and has defined risk limits using the Value at Risk (VaR) methodology. Its currency exposure within the non-trading portfolios is managed through the CS group's leveling process as set out in the Corporate FX Policy. Both these methodologies are discussed in more detail in section i) of this note.

**iv) Credit Risk**

Credit risk in CSi is managed by the UK Credit Risk Management ('UK CRM') department, which is headed by the UK Chief Credit Officer ('UK CCO'), who in turn reports to the UK Chief Risk Officer. UK CRM is a part of the wider CRM department, which is an independent function with responsibility for approving credit limits, monitoring and managing individual exposures and assessing and managing the quality of the segment and business areas' credit portfolios and allowances. CRM reports to the Chief Risk Officer of CS group. All credit limits in CSi are subject to approval by UK CRM.

### Definition of counterparty risk

Credit risk is the possibility of a loss being incurred as the result of a borrower or counterparty failing to meet its financial obligations or as a result of deterioration in the credit quality of the borrower or counterparty. In the event of a customer default a bank generally incurs a loss equal to the amount owed by the debtor, less any recoveries from foreclosure, liquidation of collateral or the restructuring of the debtor company. A change in the credit quality of the counterparty has an impact on the valuation of assets eligible for fair value measurement, with valuation changes recorded in the Consolidated Statement of Income.

### Credit risk management approach

Effective credit risk management is a structured process to assess, quantify, measure, monitor and manage risk on a consistent basis. This requires careful consideration of proposed extensions of credit, the setting of specific limits, monitoring during the life of the exposure, active use of credit mitigation tools and a disciplined approach to recognising credit impairment.

Credit limits are used to manage individual counterparty credit risk. A system of limits is also established to address concentration risk in the portfolio, including country limits, industry limits and limits for certain products. In addition, credit risk concentration is regularly supervised by credit and risk management committees, taking current market conditions and trend analysis into consideration. A credit quality review process provides an early identification of possible changes in the creditworthiness of clients and includes regular asset and collateral quality reviews, business and financial statement analysis and relevant economic and industry studies. Regularly updated watch lists and review meetings are used for the identification of counterparties where adverse changes in creditworthiness could occur.

### Counterparty and transaction rating

The CSi group employs a set of credit ratings for the purpose of internally rating counterparties to whom the CSi group are exposed to credit risk as the contractual party. Credit ratings are intended to reflect the risk of default of each counterparty. Ratings are assigned based on internally developed rating models and processes, which are subject to governance and internally independent validation procedures.

The CSi group's internal ratings may differ from counterparty's external ratings where present. Policy requires the review of internal ratings at least annually. For the calculation of internal risk estimates and Risk Weighted Assets ('RWAs'), a probability of default ('PD') is assigned to each facility, with the PD determined by the internal credit rating. Internal ratings are based on the analysis and evaluation of both quantitative and qualitative factors. The specific factors analysed are dependent on the type of counterparty. The analysis emphasises a forward looking approach, concentrating on economic trends and financial fundamentals. Analysts make use of peer analysis, industry comparisons, external ratings and research, other quantitative tools and the judgment of credit experts. The PD for each rating is calibrated based on historic default experience, using external data from Standard & Poor's, and backtested to ensure consistency with internal experience.

The CSi group assigns an estimate of expected loss in the event of a counterparty default based on the structure of each transaction. The counterparty credit rating is used in combination with credit (or credit equivalent) exposure and the loss given default ('LGD') assumption to estimate the potential credit loss. LGD represents the expected loss on a transaction should default occur and takes into account structure, collateral, seniority of the claim and, in certain areas, the type of counterparty. CSi group uses credit risk estimates consistently for the purposes of approval, establishment and monitoring of credit limits and credit portfolio management, credit policy, management reporting, risk-adjusted performance measurement, economic capital measurement and allocation and certain financial accounting purposes. This approach also allows us the pricing of transactions involving credit risk more accurately, based on risk/return estimates. CSi has been granted permission by PRA to use internal credit rating models under the Basel II A-Internal Rating Based ('IRB') approach for the majority of credit exposures in CSi. Exposures which are not covered by AIRB treatment are subject to the standardised approach.

### Credit risk overview

All transactions that are exposed to potential losses due to failure of meeting an obligation by counterparty are subject to credit risk exposure measurement and management.

### Maximum Exposure to credit risk

The following table presents the maximum exposure to credit risk of balance sheet and off-balance sheet financial instruments, before taking account of the fair value of any collateral held or other credit enhancements unless such credit enhancements meet offsetting requirements as set out in IAS 32. For financial assets recognised on the balance sheet the maximum exposure to credit risk equals their carrying amount as at 31 December 2013. For financial guarantees granted and other credit-related contingencies the maximum exposure to credit risk is the maximum amount that CSi would have to pay if the guarantees and contingencies are called upon. For loan commitments and other credit-related commitments that are irrevocable over the life of the respective facilities the maximum exposure to credit risk is the full amount of the committed facilities.

## Maximum exposure to credit risk

| 2013 | Group | | | Bank | | |
|---|---|---|---|---|---|---|
| | Gross | Collateral | Net | Gross | Collateral | Net |
| **Maximum exposure to credit risk (USD million)** | | | | | | |
| Cash and due from banks | 27,280 | - | 27,280 | 27,117 | - | 27,117 |
| Interest bearing deposits with banks | 285 | - | 285 | 285 | - | 285 |

The CSi group is exposed to credit risk as a result of either a counterparty or issuer being unable or unwilling to honour its contractual obligations. These exposures to credit risk exist within financing relationships, derivatives and other transactions.

The CSi group typically enters into master netting arrangements (MNA's) with over the counter ('OTC') derivative counterparties. The MNA's allow the CSi group to offset derivative liabilities against the derivative assets with the same counterparty in the event the counterparty defaults. Collateral on these derivative contracts is usually posted on a net counterparty basis and comprises either cash or marketable securities or a combination thereof. Included in the table above as collateral and other credit enhancements are the derivative liability amounts which would be offset against the derivative asset position upon default of the counterparty as well as any cash or marketable securities collateral held. Amounts disclosed as collateral and credit enhancements are where a counterparty has an offsetting derivative exposure with the CSi group, a legally enforceable MNA exists, and the credit risk exposure is managed on a net basis or the position is specifically collateralised, typically in the form of cash.

Also included in the table within both loans and receivables and financial assets designated at fair value through profit and loss is collateral which the CSi group holds against loans in the form of guarantees, cash and marketable securities. The CSi group also mitigates its credit exposures on certain loans primarily with credit default swaps, which economically hedge the position and as such the notional on the relevant credit default swap has been included. For further information on the collateral and credit enhancements held against loans designated at fair value, refer to Note 16 – Financial Assets and Liabilities Designated at Fair Value through Profit and Loss.

Reverse repurchase agreements and securities borrowings are typically fully collateralised instruments and in the event of default, the agreement provides the CSi group the right to liquidate the collateral held. Reverse repos are included either within securities or financial assets designated at fair value through profit and loss, based on the accounting methodology. These instruments are collateralised principally by government securities, money market instruments, corporate bonds and cash. The CSi group monitors the fair value of securities borrowed and loaned on a daily basis with additional collateral obtained as necessary. The fair value of the collateral has been included in the table above. For further information on the collateral and credit enhancements held against reverse repurchase agreements and securities borrowing refer to Note 14 – Securities Borrowed, Lent and Subject to Resale or Repurchase Agreements.

Included within other (Financial assets designated at fair value through profit or loss) are failed purchases that arise when a transaction to purchase an asset has not met the conditions for sale accounting. The CSi group typically holds collateral in the form of insurance or securities against the failed purchases.

Collateral held against financial guarantees and loan commitments typically includes securities and letters of credit. For further information about the collateral and credit enhancements held against financial guarantees and loan commitments refer to Note 34 – Guarantees and Commitments.

For further information on collateral held as security that the CSi group is permitted to sell or repledge refer to Note 37 – Assets Pledged or Assigned.

If collateral or the credit enhancement value for a particular instrument is in excess of the maximum exposure then the value of collateral and other credit enhancements included in the table has been limited to the maximum exposure to credit risk.

### Risk mitigation

CSi actively manages its credit exposure utilising credit hedges and monetiseable collateral (cash and marketable securities). Credit hedges represent the notional exposure that has been transferred to other market counterparties generally through the use of credit default swaps. CSi also actively enters into collateral arrangements for OTC derivatives and other traded products which allow it to limit the counterparty exposure risk associated with these products. Collateral taken generally represents cash or government securities although other securities may be accepted. The value of collateral reflected as a risk mitigant is net of an appropriate haircut. Collateral securing loan transactions includes:

- Financial collateral pledged against loans collateralised by securities (mostly cash and marketable securities); and
- Physical collateral (real estate property for mortgages, mainly retail residential, but also multi-family buildings, offices and commercial properties); and
- Other types of lending collateral such as accounts receivable, inventory and plant and equipment.

### Counterparty exposure before collateral by rating

| **Bank** | **31 December 2013** | | **31 December 2012** | |
|---|---|---|---|---|
| | **USD million** | **%** | **USD million** | **%** |
| AAA | 2,725 | 4 | 3,315 | 4 |
| AA+ to AA- | 14,605 | 22 | 17,445 | 21 |
| A+ to A- | 20,588 | 30 | 33,067 | 39 |
| BBB+ to BBB- | 14,566 | 22 | 15,062 | 18 |
| BB+ to BB- | 7,860 | 12 | 8,117 | 9 |
| B+ and below | 7,054 | 10 | 7,350 | 9 |
| | **67,398** | **100** | **84,356** | **100** |

### Unsecured exposure by rating (including provisions)

| **Bank** | **31 December 2013** | | **31 December 2012** | |
|---|---|---|---|---|
| | **USD million** | **%** | **USD million** | **%** |
| AAA | 3,159 | 10 | 3,958 | 13 |
| AA+ to AA- | 9,373 | 29 | 7,834 | 25 |
| A+ to A- | 10,939 | 34 | 9,606 | 31 |
| BBB+ to BBB- | 3,526 | 11 | 4,503 | 14 |
| BB+ to BB- | 1,142 | 4 | 1,886 | 6 |
| B+ and below | 3,813 | 12 | 3,413 | 11 |
| | **31,952** | **100** | **31,200** | **100** |

The above tables include all loans, commitments, derivatives, securities purchased and sold under repurchase and resale agreements, and short term cash trades on a net counterparty exposure basis for the Bank as most of the trading portfolio mainly resides in the Bank.

The first table represents mark to market exposures before offsetting any eligible collateral held; the second table represents mark to market exposures after offsetting collateral.

### Wrong-way Risk

Wrong-way exposures

Correlation risk arises when the CSi enters into a financial transaction where market rates are correlated to the financial health of the counterparty. In a wrong-way trading situation, the CSi's exposure to the counterparty increases while the counterparty's financial health and its ability to pay on the transaction diminishes. Capturing wrong-way risk requires the establishment of basic assumptions regarding correlations within a given trading product. The CSi has multiple processes that allow us to capture and estimate of wrong-way risk.

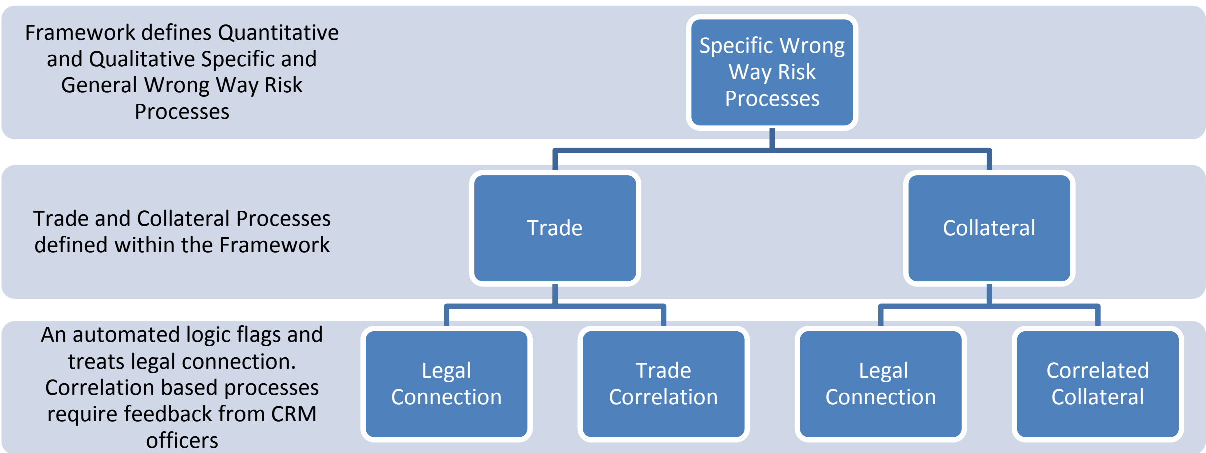
<u>Credit approval and reviews</u>

A primary responsibility of Credit Risk Management ('CRM') is the approval of new counterparty trading relationships and the subsequent on-going review of the creditworthiness of the client. Part of the review and approval process involves the consideration of the motivation of the client and the directional nature of the trading in which the client is engaged. Credit limits are sized to the level of comfort the CRM officer has with the strategy of the counterparty, the level of disclosure of financial information and the amount of risk mitigation that is present in the trading relationship (e.g. level of collateral).

<u>Exposure adjusted risk calculation</u>

Wrong way risk can arise from different business relationships.

An exposure methodology based on jump to default assumption, ineligibility of collateral or scenario based add-ons is in place to identify and adjust exposures for all specific wrong way risk types as per the distinction in the table below.



With respect to general wrong way risk, a scenario based exposure add-on is applied to those counterparties where the Basel III prescribed stressed calibration of exposure is not deemed sufficient to capture the additional risk fully.

<u>Wrong-way risk monitoring</u>

Regular reporting of wrong-way risk at both the individual trade and portfolio level allows wrong-way risk to be monitored and corrective action taken by CRM in the case of heightened concern. Transactions containing wrong way risk due to legal connection are automatically flagged and included in the regular reporting. Transactions containing wrong way risk due to correlation are flagged to CRM officers for confirmation and then included into regular reporting. Scenarios giving rise to general wrong risk for a set of counterparties broken down by industry and region are also reported to CRM officers and discussed on a regular basis at the relevant committees.

### Settlement Risk

Settlement risk arises whenever the settlement of a transaction results in timing differences between the disbursement of cash or securities and the receipt of countervalue from the counterparty. This risk arises whenever transactions settle on a 'free of payment' basis and is especially relevant when operating across time zones.

In those instances where market convention and/or products preclude a value-for-value exchange, the CSi group manages its risk through confirmation and affirmation of transaction details with counterparties. In order to reduce gross settlement risk, the CSi group leverages Clearing Houses, Central Counterparties and Central Settlement services and will also net gross cashflows with a given counterpart where possible. CSi group proactively seeks to manage the timing of settlement instructions to agents and the reconciliation of incoming payments in order to reduce the window of exposure. In addition, CRM establishes and monitors limits to control the amount of settlement risk incurred to each counterparty.

**v) Country Risk**

Country risk is the risk of a substantial, systemic loss of value in the financial assets of a country or group of countries, which may be caused by dislocations in the credit, equity and/or currency markets. UK CRM has incorporated country limits into its Credit Risk Appetite Framework in order to mitigate this risk in CSi.

For CSi, country limits are set for both developed and emerging markets, based on a potential future exposure view and on a scenario view respectively. Limits are calibrated to the capital base of CSi through a methodology which measures the capital consumption of a stressed limit utilization via the Economic Risk Capital internal model. Upon UK CRM recommendation, limits are calibrated and approved by the UK Risk Management Committee on an annual basis or more frequently if warranted by a fundamental change in strategy or market conditions. The measurement of exposures against country limits is undertaken by RAR with weekly reports to UK CRM dedicated teams and senior management. Front Office representatives are responsible for ensuring limits are respected and any breach is promptly managed. RAR and CRM provide independent oversight to ensure that businesses operate within their limits. During the course of the year, reserves are available to UK CCO and UK CRO in case a temporary or permanent limit increase is needed and justified from a risk/return perspective. More fundamental changes to the country risk profile of the firm necessitate discussions and approval at UK Risk Management Committee level.

**vi) Legal Risk**

The CS group faces significant legal risks in its businesses. Legal risks include, among other things, disputes over the terms of trades and other transactions in which the CS group acts as principal; the unenforceability or inadequacy of the documentation used to give effect to transactions in which the CS group participates; investment suitability concerns; compliance with the laws and regulations (including change in laws or regulations) of the many countries in which the CS group does business; and disputes with its employees. Some of these transactions or disputes result in potential or actual litigation that the CS group must incur legal expenses to defend.

The CS group is subject to extensive regulation in the conduct of its investment business. A failure to comply with applicable regulations could result in regulatory investigations, fines and restrictions on some of the CS group's business activities or other sanctions. The CS group seeks to minimise legal risk through the adoption of compliance and other policies and procedures, continuing to refine controls over business practices and behaviour, employee training sessions, the use of appropriate legal documentation, and the involvement of the Legal and Compliance department and outside legal counsel. In addition, the CS group is an active participant in ISDA and other professional derivative market forums, with specific focus on improving levels of derivative market and product standardisation, legal definition and protocol.

## vii) Operational risk

Operational risk is the risk of loss resulting from inadequate or failed internal processes, people or systems or from external events. CS group's primary aim is the early identification, recording, assessment, monitoring, prevention and mitigation of operational risks, as well as timely and meaningful management reporting. Where appropriate, CS group transfers operational risks to third-party insurance companies.

Operational risk is inherent in most aspects of CS group's activities and is comprised of a large number of disparate risks. While market and credit risk are often chosen for the prospect of gain, operational risk is normally accepted as a necessary consequence of doing business. In comparison to market or credit risk, the sources of operational risk are difficult to identify comprehensively and the amount of risk is also inherently difficult to measure. The effective management of operational risk requires a common CS group-wide framework with ownership of these risks residing with the management responsible for the relevant business process.

### Operational risk management

Each individual business area takes responsibility for its operational risks and the provision of adequate resources and procedures for the management of those risks. Businesses are supported by designated operational risk teams at the divisional and CS group level that are responsible for the implementation of the operational risk management framework, methodologies, tools and reporting within their areas as well as working with management on any operational risk issues that arise.

In 2013, CS group consolidated the various operational risk teams in the independent risk management function into a single Operational Risk Management ('ORM') department, reporting into the Chief Risk Officer. ORM is responsible for the overall design of the operational risk management framework, for operational risk capital modelling and for providing assistance and challenge to business line operational risk teams. It ensures the cohesiveness of policies, tools and practices throughout CS group for operational risk management, specifically with regard to identification, evaluation, mitigation, monitoring and reporting of relevant operational risks.

Operational risk exposures, metrics, issues and remediation efforts are discussed at the Bank's risk management committees, which have senior staff representatives from all the relevant functions. The Bank utilises a number of CS group-wide tools for the management and reporting of operational risk. These include:

- Risk appetite tolerance levels, which set out senior management's expectations with respect to losses or metrics- breaches of tolerance levels are reported to senior management and may trigger actions;
- Reporting on top operational risks, which is used to highlight the most material risks to senior management, along with associated risk remediation efforts;
- The operational risk register, which contains a catalogue of inherent operational risks arising as a consequence of CS group's activities;
- Risk and control indicators, which are metrics that are used to monitor specified operational risks and controls over time- they may be associated with tolerance levels that define acceptable performance and provide early warning signals about potential impending issues;
- Risk and control self-assessments ('RCSAs'), which are comprehensive, bottom-up assessments of the key operational risks in each business; RCSAs utilise other components of the operational risk framework, such as risk and control indicators and loss data, and they evaluate the strength of mitigating controls to produce an assessment of the residual risks in each business;

- Internal operational risk incident data, which provide information on CS group's operational risk profile- incident investigations are carried out for material internal operational risk events, including those that did not result in economic losses and are used to assess control failings, identify required improvements and ascertain whether events have implications for other businesses;
- External operational risk incident data for peer firms, which are collected to identify risks that may be relevant in the future, even if they have not impacted CS group to date; and
- Operational risk scenarios, which are used to identify and measure exposure to a range of adverse events, such as unauthorised trading- these scenarios help businesses assess the suitability of controls in the light of potential losses, and they are also an input to the internal model used by CS group to calculate economic and regulatory capital.

CS group is continuously enhancing its operational risk management practices. There is an ongoing programme to roll out improvements to each of the components of the operational risk framework and to ensure that the links between individual components work effectively. In 2013, key enhancements included the introduction of a standardised operational risk register to ensure that risks are categorised and reported consistently, revisions to the RCSA process to improve assessment quality and increase output transparency, and the introduction of more granular operational risk tolerance levels for certain businesses. The framework enhancement programme is scheduled to be completed by the end of 2015.

**viii) Conduct Risk**

Conduct risk is the risk of poor conduct and behaviour by firms and/or individuals resulting in clients not getting a fair deal, a lack of integrity in dealings on financial markets and in the wider financial system and a lack of effective competition in the interests of consumers.

A London Conduct Risk Committee ('LCRC') has been established which is designed to enable the Bank to review the effectiveness of the Bank's conduct risk framework and challenge business leaders on the suitability and effectiveness of the measures and tools used in their businesses to identify, control and mitigate conduct risk. The LCRC is tasked with sponsoring and reviewing appropriate policies and procedures and monitoring peer group and regulatory statements and developments in the conduct risk space. The LCRC will consider reports covering conduct risk identification, conduct risk mitigation and conduct risk management information.

**ix) Reputational Risk**

It is CS group's policy to avoid any action, transaction or relationship with a politically exposed person which poses an unacceptable level of risk to CS group's reputation. Reputational risk may arise from a variety of sources, including, but not limited to, the nature or purpose of a proposed transaction, the identity or nature of a potential client, the regulatory or political climate in which the business will be transacted or significant public attention surrounding the transaction itself. The CSi Board has formally delegated reputational risk issues to CS group's global Reputational Risk Review Process ('RRRP') and where an action or transaction gives rise to potential reputational risk for CS group, the relevant business proposal is required to be submitted to the RRRP.

The RRRP in EMEA involves a vetting of the proposal by senior business management, and its subsequent referral to one of CS group's Reputational Risk Approvers ('RRA'), each of whom is independent of the business divisions and has the authority to approve, reject, or impose conditions on CS group's participation. If the RRA considers there to be a material reputational risk associated with a submission, it is escalated to the EMEA Reputational Risk Committee (the Committee) for review and final decision. The Committee is comprised of senior regional, divisional, shared services and CSi entity management.

Reputational risk is assessed on a regional basis; however the EMEA RRA will be included as part of the decision making process for any action or transaction which is a Remote Booking into CSi, which may include escalation to the Committee where appropriate reputational risk statistics, trends and notable submissions are reported to the CSi Board on a quarterly basis.

## 40. Offsetting of Financial Assets and Financial Liabilities

The disclosures set out in the tables below include derivative instruments, reverse repurchase and repurchase agreements, securities lending and borrowing transactions, and funded derivatives that:

- are offset in the CSi group's Consolidated Statement of Financial Position; or
- are subject to an enforceable master netting agreement or similar agreement (enforceable master netting agreements), irrespective of whether they are offset in the CSi group's Consolidated Statement of Financial Position.

Similar agreements include derivative clearing agreements, global master repurchase agreements, global master securities lending agreements, and any related rights to financial collateral.

Financial instruments such as loans and deposits are not disclosed in the tables below. They are not offset in the Consolidated Statement of Financial Position.

### Derivatives

The CSi group transacts bilateral OTC derivatives (OTC derivatives) mainly under International Swaps and Derivatives Association (ISDA) Master Agreements. These agreements provide for the net settlement of all transactions under the agreement through a single payment in the event of default or termination under the agreement.

The above ISDA Master Agreements do not meet the criteria for offsetting in the Consolidated Statement of Financial Position. This is because they create a right of set-off of recognised amounts that is enforceable only following an event of default, insolvency or bankruptcy of the CSi group or the counterparties. In addition the CSi group and its counterparties do not intend to settle on a net basis or to realise the assets and settle the liabilities simultaneously.

Collateral for OTC derivatives is received and provided in the form of cash and marketable securities. Such collateral may be subject to the standard industry terms of an ISDA Credit Support Annex. The terms of an ISDA Credit Support Annex provide that securities received or provided as collateral may be pledged or sold during the term of the transactions and must be returned upon maturity of the transaction. These terms also give each counterparty the right to terminate the related transactions upon the other counterparty's failure to post collateral. Financial collateral received or pledged for OTC derivatives may also be subject to collateral agreements which restrict the use of financial collateral.

For exchange-traded derivatives and OTC-cleared derivatives, positive and negative replacement values and related cash collateral are offset if the terms of the rules and regulations governing these exchanges and central clearing counterparties permit such netting and offset because the CSi group:

- currently has a legally enforceable right to set off the recognised amounts; and
- intends either to settle on a net basis, or to realise the asset and settle the liability simultaneously. Criteria (b) of IAS 32.42 may only be met, if – depending on the settlement mechanism – certain criteria are met (e.g., derivatives with the same currency).

Where no such agreements exist, fair values are recorded on a gross basis.

Under IFRS, the CSi group has elected to account for substantially all hybrid financial instruments with an embedded derivative that is not considered closely related to the host contract at fair value. Where these hybrid financial instruments are subject to an enforceable master netting agreement or similar agreement, they are included in the tables Offsetting of Funded Derivatives on page 158.

The following table presents the gross amount of derivative instruments subject to enforceable master netting agreements, the amount of offsetting, the amount of derivatives not subject to enforceable master netting agreements and the net amount presented in the Consolidated Statement of Financial Position.

## Offsetting of derivative instruments

| (USD millions) | 2013 | | | 2012 | | |
|---|---|---|---|---|---|---|
| **Group** | **Gross** | **Offsetting** | **Net** | **Gross** | **Offsetting** | **Net** |
| **Derivative Assets** | | | | | | |

| of which recorded in trading financial liabilities at fair value through profit or loss | 659,164 | (301,209) | 357,955 | 918,720 | (410,180) | 508,540 |

1 Represents derivative instruments where a legal opinion supporting the enforceability of netting in the event of default or termination under the agreement is not in place.

## Reverse repurchase and repurchase agreements and securities lending and borrowing transactions

Reverse repurchase and repurchase agreements are generally covered by global master repurchase agreements with netting terms similar to ISDA Master Agreements. In certain situations, for example in the event of default, all contracts under the agreements are terminated and are settled net in one single payment.

Securities lending and borrowing transactions are generally executed under global master securities lending agreements with netting terms similar to ISDA Master Agreements. In certain situations, for example in the event of default, all contracts under the agreement are terminated and are settled net in one single payment. Transactions under these similar agreements are not netted in the Consolidated Statement of Financial Position because securities lending and borrowing transactions do not meet the criterion of having the same settlement date specified at inception of the transaction, and therefore they are not eligible for netting in the Consolidated Statement of Financial Position apart from the other conditions to be met for netting.

Reverse repurchase and repurchase agreements are collateralised principally by government securities, money market instruments and corporate bonds and have terms ranging from overnight to a longer or unspecified period of time. In the event of counterparty default, the reverse repurchase agreement or securities lending agreement provides the CSi group with the right to liquidate the collateral held. As is the case in the CSi group's normal course of business, the majority of the collateral received that may be sold or repledged was sold or repledged as of December 31, 2013 and December 31, 2012. In certain circumstances, financial collateral received may be restricted during the term of the agreement (e.g., in tri-party arrangements).

The following table presents the gross amount of securities purchased under resale agreements and securities borrowing transactions subject to enforceable master netting agreements, the amount of offsetting, the amount of securities purchased under resale agreements and securities borrowing transactions not subject to enforceable master netting agreements and the net amount presented in the Consolidated Statement of Financial Position.

## Offsetting of securities purchased under resale agreements and securities borrowing transactions

| Group and Bank (USD Millions) | 2013 Gross | 2013 Offsetting | 2013 Net | 2012 Gross | 2012 Offsetting | 2012 Net |
|---|---|---|---|---|---|---|
| **Securities purchased under resale agreements and securities borrowing transactions** | | | | | | |
| Securities purchased under resale agreements | 25,927 | - | 25,927 | 24,245 | - | 24,245 |
| Securities borrowing transactions | 1,667 | - | 1,667 | 4,137 | - | 4,137 |
| **Total subject to enforceable master netting agreements** | 27,594 | - | 27,594 | 28,382 | - | 28,382 |
| **Total not subject to enforceable master netting agreements[1]** | 1,701 | - | 1,701 | 1,004 | - | 1,004 |
| **Total[2]** | **29,295** | | **29,295** | **29,386** | | **29,386** |

1 Represents securities purchased under resale agreements and securities borrowing transactions where a legal opinion supporting the enforceability of netting in the event of default or termination under the agreement is not in place.

2 USD 7,597 million (2012 USD 5,283) of the total net amount are reported at fair value.

The following table presents the gross amount of securities sold under repurchase agreements and securities lending transactions subject to enforceable master netting agreements, the amount of offsetting, the amount of securities sold under repurchase agreements and securities lending transactions not subject to enforceable master netting agreements and the net amount presented in the Consolidated Statement of Financial Positions.

## Offsetting of securities sold under repurchase agreements and securities lending transactions

| Group and Bank (USD Millions) | 2013 Gross | 2013 Offsetting | 2013 Net | 2012 Gross | 2012 Offsetting | 2012 Net |
|---|---|---|---|---|---|---|
| **Securities sold under repurchase agreements and securities lending transactions** | | | | | | |
| Securities sold under repurchase agreements | 11,066 | - | 11,066 | 12,149 | - | 12,149 |
| Securities lending transactions | 1,959 | - | 1,959 | 2,654 | - | 2,654 |
| **Total subject to enforceable master netting agreements** | 13,025 | - | 13,025 | 14,803 | - | 14,803 |
| **Total not subject to enforceable master netting agreements[1]** | 250 | - | 250 | 844 | - | 844 |
| **Total[2]** | **13,275** | **-** | **13,275** | **15,647** | **-** | **15,647** |

1 Represents securities sold under repurchase agreements and securities lending transactions where a legal opinion supporting the enforceability of netting in the event of default or termination under the agreement is not in place.

2 USD 8,239 million (USD 10,773) of the total net amount are reported at fair value.

The following table presents the gross amount of Funded Derivatives Assets subject to enforceable master netting agreements, the amount of offsetting, the amount of Funded Derivatives Assets not subject to enforceable master netting agreements and the net amount presented in the Consolidated Statement of Financial Position.

## Offsetting of Funded Derivatives Assets

| | 2013 | | | 2012 | | |
|---|---|---|---|---|---|---|
| **Group and Bank (USD Millions)** | **Gross** | **Offsetting** | **Net** | **Gross** | **Offsetting** | **Net** |
| **Funded Derivatives Assets**[1] | | | | | | |
| Funded Derivative instruments subject to enforceable master netting agreements | 1,557 | - | 1,557 | 1,790 | - | 1,790 |
| Funded Derivative instruments not subject to enforceable master netting agreements[2] | 3,037 | - | 3,037 | 2,745 | - | 2,745 |
| **Total Funded Derivatives Assets** | **4,594** | **-** | **4,594** | **4,535** | **-** | **4,535** |

1 These represent funded derivatives included under Loans in Financial assets designated at fair value through profit or loss.

2 Represents Funded Derivatives where a legal opinion supporting the enforceability of netting in the event of default or termination under the agreement is not in place.

The following table presents the gross amount of Funded Derivatives Liabilities subject to enforceable master netting agreements, the amount of offsetting, the amount of Funded Derivatives Liabilities not subject to enforceable master netting agreements and the net amount presented in the Consolidated Statement of Financial Position.

## Offsetting of Funded Derivatives Liabilities

| | 2013 | | | 2012 | | |
|---|---|---|---|---|---|---|
| **Group and Bank (USD Millions)** | **Gross** | **Offsetting** | **Net** | **Gross** | **Offsetting** | **Net** |
| **Funded Derivatives Liabilities**[1] | | | | | | |
| Funded Derivative instruments subject to enforceable master netting agreements | 3,913 | - | 3,913 | 2,707 | - | 2,707 |
| Funded Derivative instruments not subject to enforceable master netting agreements[2] | 350 | - | 350 | 1,524 | - | 1,524 |
| **Total Funded Derivatives Liabilities** | **4,263** | **-** | **4,263** | **4,231** | **-** | **4,231** |

1 These represent funded derivatives included under structured notes in Financial liabilities designated at fair value through profit or loss.

2 Represents Funded Derivatives where a legal opinion supporting the enforceability of netting in the event of default or termination under the agreement is not in place.

The following table presents the net amount presented in the Consolidated Statement of Financial Position of financial assets and liabilities subject to enforceable master netting agreements and the gross amount of financial instruments and cash collateral not offset in the Consolidated Statement of Financial Position. The gross amount of financial instruments not offset in the Consolidated Statement of Financial Position includes amounts related to recognised financial instruments that do not meet some or all of the offsetting criteria in IAS 32.42 as well as non-cash financial collateral. The table excludes derivative instruments, reverse repurchase and repurchase agreements, securities lending and borrowing transactions and funded derivatives not subject to enforceable master netting agreements where a legal opinion supporting the enforceability of netting in the event of default or termination under the agreement is not in place. Net exposure reflects risk mitigation in the form of collateral.

## Amounts not offset in the Consolidated Statement of Financial Position

| **Total financial assets subject to enforceable master netting agreements** | **371,067** | **(335,365)** | **(18,539)** | **17,163** | **523,594** | **(469,178)** | **(33,354)** | **21,062** |
| **Financial liabilities subject to enforceable master netting agreements** | | | | | | | | |
| Derivative instruments | 348,845 | (313,977) | (23,345) | 11,523 | 498,060 | (447,245) | (38,203) | 12,612 |
| Securities sold under repurchase agreements | 11,066 | (11066) | - | - | 12,149 | (12,149) | - | - |
| Securities lending transactions | 1,959 | (1,959) | - | - | 2,654 | (2,654) | - | - |
| Financial liabilities designated at fair value through profit or loss | 3,913 | (763) | - | 3,150 | 2,707 | (39) | - | 2,668 |
| **Total financial liabilities subject to enforceable master netting agreements** | **365,783** | **(327,765)** | **(23,345)** | **14,673** | **515,570** | **(462,087)** | **(38,203)** | **15,280** |

1 Net amount presented in the Consolidated Statement of Financial Position and subject to enforceable master netting agreements, as per the preceding tables.

2 The total amount reported in financial instruments and cash collateral is limited to the net amount for the related instruments presented in the Consolidated Statement of Financial Position.

Net exposure is subject to further credit mitigation through the transfer of the exposure to other market counterparties by the use of CDS and credit insurance contracts. Therefore the net exposure presented in the above table is not representative of CSi's counterparty exposure.

## 41. Capital Adequacy

CSi's capital adequacy and capital resources are managed and monitored based on practices developed by the Basel Committee on Banking Supervision (the 'Basel Committee') and governed by European Union directives. These directives are implemented in the UK by the PRA, the UK regulator, and incorporated within its prudential sourcebooks for banks and investment firms.

### Capital Resources

Regulatory capital resources comprise a number of 'tiers'. Tier 1 capital principally comprises shareholders' equity. This is supplemented by Tier 2 and Tier 3 capital, which consist mainly of subordinated debt instruments. Total capital equals the sum of these, less regulatory deductions for items specified by the regulators, including material holdings of capital instruments issued by banks and investment firms, along with prudential filters, which are adjustments to accounting values for regulatory purposes.

CSi's overall capital needs are reviewed to ensure that its capital base can appropriately support the anticipated needs of its businesses. The capital management framework at CSG is designed to ensure that capital resources are sufficient to support the underlying risks of the business activity, to meet the objectives of management and to meet the requirements of regulators, rating agencies and market participants.

CSi received a Tier 1 capital injection of USD 10 billion Participating Shares and a Lower Tier 2 capital injection of USD 1.1 billion subordinated debt during the course of 2013 in order to support the business. In 2012 a capital restructuring took place, CSi received a Tier 1 capital injection of USD 2 billion and a further Tier 1 injection of USD 202 million to replace Tier 2 subordinated debt that was repaid. Other movements in capital resources were as follows:

| | **2013** | **2012** |
|---|---|---|
| **Regulatory capital less deductions (USD million)** | | |
| **Total regulatory capital less deductions at 1 January** | **22,042** | **20,471** |
| Changes in Tier 1 instruments: | | |
| ■ Capital Injections | 10,000 | 2,000 |
| ■ Increase on reorganisation of capital base | - | 3,165 |
| Changes in Tier 2 instruments: | | |
| ■ Decrease on reorganisation of capital base | - | (3,155) |
| ■ Subordinated debt issued | 1,100 | |
| Net movement on Tier 2 capital (amortisation and currency translation) | (24) | 10 |
| Profit and loss and movements in other comprehensive income (including solo-consolidated entities) | (573) | (665) |
| Net movement in regulatory deductions and prudential filters | 134 | 216 |
| **Total regulatory capital less deductions at 31 December** | **32,679** | **22,042** |

Under the Basel Committee guidelines, an institution must have a ratio of total eligible capital to aggregate risk-weighted assets of at least 8% although the PRA requires this ratio to exceed the Individual Capital Guidance ('ICG') determined for each institution. This ratio can also be expressed as a capital coverage ratio, being the ratio of total eligible capital to total capital resources requirements, which must be at least 100%. The capital resources requirements reflect the credit, market and other risks of the Bank calculated using methodologies set out by the PRA.

CSi must at all times monitor and demonstrate the compliance with the relevant regulatory capital requirements of the PRA. CSi has put in place processes and controls to monitor and manage its capital adequacy and no breaches were reported to the PRA during the year.

The following table sets out details of CSi's regulatory capital resources at 31 December 2013 and 2012.

| | 2013 | 2012 |
|---|---|---|
| **Regulatory capital less deductions (USD millions)** | | |
| **Total shareholders' equity-Bank** | **25,041** | **15,577** |
| Reconciliation to Tier 1 capital: | | |
| ■ Regulatory deductions | (433) | (465) |
| ■ Prudential filters | 37 | (63) |
| ■ Reserves of solo-consolidated entities | (13) | 22 |
| **Tier 1 capital less deductions** | **24,632** | **15,071** |
| Tier 2 capital: | | |
| ■ Upper Tier 2- Perpetual Subordinated Debt | 2,508 | 2,507 |
| ■ Lower Tier 2 – Term Subordinated Debt | 5,573 | 4,499 |
| Excess Tier 2 capital | - | - |
| **Tier 2 capital** | **8,081** | **7,006** |
| | | |
| **Tier 1 plus Tier 2 capital** | **32,713** | **22,077** |
| Deductions | | |
| ■ Securitisation positions | (33) | - |
| ■ Expected loss amounts | - | - |
| ■ Other investments deducted from capital | - | (35) |
| **Tier 1 plus Tier 2 capital, less deductions** | **32,680** | **22,042** |
| Excess Tier 2 capital | - | - |
| Deductions from total capital | - | - |
| **Total regulatory capital less deductions** | **32,680** | **22,042** |

December 2010, the Basel Committee on Banking Supervision issued the Basel III framework with higher minimum capital requirements, and new conservation and countercyclical buffers, revised risk-based capital measures, a leverage ratio and liquidity standards. This was designed to strengthen the resilience of the banking sector. There were some subsequent refinements to this framework. The new capital standards and capital buffers require banks to hold more capital, mainly in the form of common equity. Basel III was implemented in the EU by amendment to the Capital Requirements Directive (CRD) and applies to both banks and investment firms. This has taken the form of a regulation and a directive with effect from 1 January 2014.

## 42. PRA Pillar 3 disclosures

Pillar 3 disclosures required by the UK implementation of Basel II under PRA rules can be found separately at www.credit-suisse.com.

## 43. Country-by-Country Reporting

The information relating to Country-by-Country reporting, required by Article 89 of Directive 2013/36/EU ('Capital Requirements Directive'), will be published at www.credit-suisse.com on or before 1 July 2014.

## 44. Subsequent Events

In February 2014, CSG provided employees who hold outstanding 2011 Partner Asset Facility (PAF2) awards with the opportunity to exchange their PAF2 awards. PAF2 awards were linked to a portfolio of CSG's credit exposures, providing risk offset and capital relief. Due to regulatory changes, this capital relief was no longer available after December 31, 2013. As a result, CSG terminated the PAF2 awards and exchanged them at fair value for other compensation awards. Refer to Note 30 – Share-based Compensation and other Compensation Benefits for further information on the exchange of PAF2 awards.

# Directors' Report for the Year ended 31 December 2012

The directors present their Report and the Financial Statements for the year ended 31 December 2012.

## International Financial Reporting Standards

Credit Suisse International's 2012 Financial Statements have been prepared in accordance with International Financial Reporting Standards ('IFRS') as adopted for use in the European Union ('EU').

The Financial Statements for the year ended 31 December 2012 comprise Credit Suisse International ('CSi' or the 'Bank') and its subsidiaries together referred to as the 'CSi group'.

The Financial Statements were authorised for issue by the directors on 28 March 2013.

## Business Review

### Profile

CSi is a bank domiciled in the United Kingdom. It is a global market leader in over-the-counter ('OTC') derivative products from the standpoints of counterparty service, innovation, product range and geographic scope of operations. CSi offers a range of interest rate, currency, equity, commodity and credit-related OTC derivatives and certain securitised products. CSi's business is primarily client-driven, focusing on transactions that address the broad financing, risk management and investment concerns of its worldwide client base. CSi enters into derivative contracts in the normal course of business for market-making, positioning and arbitrage purposes, as well as for risk management needs, including mitigation of interest rate, foreign currency and credit risk.

CSi is an unlimited liability company and an indirect wholly owned subsidiary of Credit Suisse Group AG ('CSG'). CSi is authorised under the Financial Services and Markets Act 2000 by the Financial Services Authority ('FSA'). CSG, a company domiciled in Switzerland, is the ultimate parent of a worldwide group of companies (collectively referred to as the 'CS group') specialising in Investment Banking and Private Banking & Wealth Management. CSG prepares financial statements under US Generally Accepted Accounting Principles ('US GAAP'). These accounts are publicly available and can be found at www.credit-suisse.com.

As a leading financial services provider, CS group is committed to delivering its combined financial experience and expertise to corporate, institutional and government clients and high-net-worth individuals worldwide, as well as to retail clients in Switzerland. CS group serves its clients through two divisions, Investment Banking and Private Banking & Wealth Management, which co-operate closely to provide holistic financial solutions based on innovative products and specially tailored advice. Founded in 1856, CS group has a truly global reach today, with operations in over 50 countries and a team of more than 47,400 employees from approximately 100 different nations.

### Management and governance

A number of management changes have been effected and governance strengthened. Gael de Boissard was appointed CEO of CSi and Michael Hodgson was appointed deputy CEO. Noreen Doyle was appointed Chair of the Board of Directors and Stephen Kingsley was appointed Chair of the Audit Committee. All such nominations are dealt with at CS group level.

In addition, the Bank has appointed a UK Chief Risk Officer ('CRO') and has made a series of changes to the risk governance framework as described in 'Risk Management' – page 10. Furthermore a risk committee has been established as set out in 'Internal Control and Financial Reporting' – page 8.

As in previous years employee compensation remains the subject of the CS group Remuneration Committee. The recommendations are, however, reviewed by CSi's Board of Directors. Consistent with the requirements of the FSA Remuneration Code the Bank has broadened the 'Malus clause' which is applicable to Code staff, UK Managing Directors and certain other identified employees.

### Principal products/Principal product areas

The CSi group has three principal business divisions: Fixed Income, Equities and Investment Banking, which are managed as a part of the Investment Banking Division of CS group:

- The Fixed Income Division ('FID') provides a complete range of derivative products including forward rate agreements, interest rate and currency swaps, interest rate options, bond options, commodities and credit derivatives for the financing, risk management and investment needs of its customers. FID also engages in underwriting, securitising, trading and distributing a broad range of financial instruments in developed and emerging markets including US Treasury and government agency securities, US and foreign investment-grade and high yield corporate bonds, money market instruments, foreign exchange and real estate related assets.
- The Equity Division engages in a broad range of equity activities for investors including sales, trading, brokerage and market making in international equity and equity related securities, options and futures and OTC derivatives.
- The Investment Banking Division ('IBD') includes financial advisory services regarding mergers and acquisitions, origination and distribution of equity and fixed income securities, leveraged finance and private equity investments and, in conjunction with FID and Equities, capital raising services.

### Economic environment

In the UK, the annual rate of Consumer Price Index ('CPI') inflation was 2.7% in December 2012 which was a reduction from 2011. The Bank of England's target rate was 2%. The Bank of England left interest rates unchanged at 0.5% throughout the year, and the Asset Purchase Program was increased by GBP 100 billion to GBP 375 billion in 2012. The unemployment rate was 7.7% at the end of 2012. After growing by 0.9% in 2011, UK Gross Domestic Product ('GDP') eased to 0.4% in 2012.

The global economy showed signs of expansion in the first quarter of 2012 however as the year progressed there were signs of weakness which remained through to the end of the year. While growth in the US continued, overall economic activity in the Eurozone continued to contract.

Central Banks across the globe maintained expansionary monetary policies in an effort to strengthen and stimulate their economies. The US Federal Reserve ('Fed') maintained interest rates unchanged at 0.25% through the year. The Fed reacted to the slow improvement in the US labour market by extending its pledge to keep short-term interest rates at low levels until mid-2015, noting that monetary policy will remain highly accommodative even after the recovery strengthens. The Fed also announced it would purchase significant amounts of mortgage-backed securities until there is a substantial labour market improvement. The Fed also continued to shift its short-term US Treasury holdings towards longer-term securities.

In July 2012 the European Central Bank ('ECB') cut its key rate from 1% to 0.75%. This was driven by the need to ease monetary conditions in the Eurozone on the back of weak economic growth that resulted in heightened uncertainty, weighing on both confidence and sentiment. At the same time the ECB also cut its deposit rate from 0.25% to zero, with the intention of encouraging banks to lend to other institutions, companies or households instead of placing excess cash in the ECB's overnight deposit facility.

The Eurozone sovereign debt crisis remained a key theme of 2012. Greek elections in May did not result in a parliamentary majority and only renewed elections in June resulted in the formation of a coalition seeking continued participation of the country in the Eurozone. In late June, Spain asked for a EUR 100 billion bailout package to recapitalise Spanish banks. European leaders agreed on further proposals to stabilise the Eurozone, including a single banking supervisory mechanism run by the ECB and authorising the European Stability Mechanism to inject funds into banks directly. The ECB's pledge to buy unlimited amounts of Eurozone government bonds helped diffuse the Eurozone debt crisis towards the end of the year as yields on Spanish and Italian bonds fell.

In the emerging markets, there were similar trends. Brazil's central bank decreased its benchmark rate to 7.25% on the back of slowing growth in the economy. China also lowered interest rates for the first time since 2008 stepping up efforts to combat a deepening slowdown, and in India the Reserve Bank of India cut interest rates to boost a sagging economy.

### Financial markets and sector environment

In the first quarter of 2012, equity markets had their best quarterly performance of the past decade with some markets rallying more than 10%. Volatility, as indicated by the Chicago Board of Options Exchange Market Volatility Index ('VIX'), reached its lowest 5 year level in the first quarter driven by increased liquidity. Volatility remained low for the most part of the year, however towards the end of the year it increased as the US 'fiscal cliff' debate became more contentious. Despite lacklustre third quarter earnings results in US and Europe, increased risk appetite and low bond yields resulted in global equity prices ending higher by the end of 2012, however trading volumes on most stock exchanges remained subdued.

After a good performance for credit markets in the first half of 2012, the debt crisis in Europe drove yields of fiscally weaker European sovereigns and European banks to record highs. The first half of the year saw sovereign bonds from most troubled Eurozone countries posting negative returns and yields on Spanish bonds reached record levels. This trend was reversed towards the end of the year as concerns about the stability of the European Monetary Union diminished. Corporate and emerging markets high yield bonds outperformed German Bunds and European investment grade corporate bonds. In the US markets, the quantitative easing announcements by the Fed pushed up prices of inflation-linked bonds as inflation expectations increased.

In currency markets, the European sovereign debt crisis and softening growth indicators were the main drivers in 2012. Initially the US dollar strengthened against the euro on concerns over Eurozone debt and risk aversion. However in the second half of the year, the measures announced by the ECB and the actions taken by the Fed (which announced a further round of Treasury securities purchases) eased the risk premium on the euro. The US dollar was subdued against sterling initially, but lost ground in the later part of the year due to the easing of monetary policies by the Fed. For the most part of the year, sterling appreciated against the Euro on market concerns about the developments in the euro area. Towards the end of the year, however, sterling depreciated against the euro due to a reduction in near-term tail risks associated with euro-area sovereign debt problems.

Commodity markets were volatile, beginning with an increase in prices in the first quarter, due to political tensions in the Middle East resulting in an increase in oil prices. The second quarter saw sharp price declines mainly on account of selling pressures due to concerns regarding the global economic slowdown, a strong US dollar and the ongoing Eurozone sovereign debt issues. Central Bank announcements of continued monetary easing drove up gold prices.

2012 was a challenging year for the banking sector. In Investment Banking, global equity trading volumes decreased 21% year on year. Global completed mergers and acquisitions (M&A) activity was stable year on year, while European activity declined, with completed transactions down 27%. Global equity underwriting volumes were up 36% year on year, with European demand picking up. For global debt underwriting, volumes were up 88% year on year, with strong activity in Europe. In the US, fixed income volumes were stable year on year. European bank stocks performed strongly in the second half of the year and for the fourth quarter had gains of 11%.

In December, European finance ministers proposed further details on EU banking supervision whereby the ECB would assume overall oversight of EU banks in collaboration with national regulators, with a focus on large, systemically important institutions. Banks continued to adjust and develop their business models, driven by the need to achieve cost efficiencies and the impacts of regulatory developments.

### Performance

For the year ended 31 December 2012, the CSi group reported a net loss attributable to shareholders of USD 734 million (2011: USD 278 million loss). Net revenues amounted to USD 1,302 million (2011: USD 1,786 million). After operating expenses the CSi group reported a loss before tax of USD 359 million (2011: USD 193 million loss).

While 2012 net revenues have deteriorated relative to 2011, this is primarily attributable to the impact of fair value changes in financial liabilities due to improvements in CSi's own credit worthiness, resulting in valuation losses of USD (259) million (2011: USD 184 million gain).

The underlying 2012 financial performance of the CSi group was driven by a stable but subdued environment with generally lower uncertainty and volatility than in 2011.

Against this market backdrop, the divisional revenues were as follows:

- Fixed Income revenues increased in 2012 by 4% to USD 1,829 million compared to 2011. EMEA trading had a strong performance in 2012 driven by increased investor appetite for Turkish, Russian, Israeli and South African Bonds and FX products on the back of the Eurozone crisis. The Structured Credit business showed increased revenues driven by a large secured funding intermediation transaction, and the buy-back and subsequent unwind of several long dated asset liability matching transactions. Within the Rates business, customer flows could not be maintained, with stagnant market conditions and lower client risk appetite due to the lack of positive news in the market.
- Equity revenues were USD 789 million, an increase of 6% compared to 2011. Equity Derivatives revenues increased in 2012 and within Prime Services the Delta One financing business showed strong performance in the China ETF and NDF markets. The volatility trading desk recorded declining revenues, since 2012 was a benign year with less major events and disturbances in the market compared to 2011.
- Investment Banking revenues were USD 226 million which is consistent with the prior year

Note 4 – Segmental Analysis illustrates the region which generated the above revenues.

Net revenues were further impacted by the following items not allocated to the above divisions:

- Valuation losses of USD 160 million (2011: USD 132 million gain) as a result of fair value changes in issued structured notes due to changes in the CSi group's own creditworthiness arising from the tightening of credit curves in 2012.
- A charge of USD 109 million (2011: USD 161 million) was included in net revenues as a result of a change in estimate relating to the expansion of the use of Overnight Indexed Swap ('OIS') interest rate yield curves, instead of other reference rates such as London Interbank Offered Rate ('LIBOR'), in determining the fair value of certain collateralised derivatives. This was based on the regular review of observable parameters used in pricing models.
- The cost of revenue sharing agreements with other CS group companies for the year of USD 734 million (2011: USD 459 million).
- USD 662 million of costs relating to treasury funding charges (2011: USD 540 million). This primarily comprises excess funding charges on long term financing versus overnight funding rates, which are only allocated out to the businesses at the CS group level. This includes losses of USD

99 million (2011: USD 52 million gain) as a result of fair value changes in treasury issued debt due to changes in the CSi's own creditworthiness.

The CSi group's operating expenses were USD 1,661 million (2011: USD 1,979 million). Compensation costs decreased by USD 28 million in 2012 as a result of cost reduction initiatives. General and administrative expenses decreased by USD 309 million, of which USD 157 million was as a result of a decrease in overhead expenses allocated from CS group. Additionally, brokerage and clearing house fees were reduced, primarily due to lower aluminium metal storage costs following the sale of inventory in early 2012.

Included in operating expenses is an expense of USD 38 million (2011: USD 44 million) in respect of the UK Bank Levy. The tax, applicable to all Banks and Banking groups operating in the UK, is charged on liabilities as at the statement of financial position date at a rate of 8.8 basis points for all short-term liabilities and 4.4 basis points for long-term liabilities, increasing to 13.0 and 6.5 basis points respectively in 2013.

Net income for the year was significantly impacted by the increased tax charge. In the second quarter of 2012, the UK and US tax Authorities advised CSi group that they reached agreement on the CSG Advanced Pricing Agreement ('APA') application for the period 2004-2011. The APA sets out the transfer pricing methodology which determines the allocation of profits and losses to be taxed in each jurisdiction. As a result of this agreement, for tax purposes, CSi reduced losses carried forward by USD 834 million, which resulted in an income tax expense of USD 324 million and an overall reduction in CSi's net deferred tax asset of USD 334 million.

The effective tax rate was (103.9%) for the year ended 31 December 2012. The effective tax rate is higher than the UK statutory tax rate due primarily to the decrease in the deferred tax asset due to the finalisation of the APA described above, as well as the reduction in the UK statutory tax rate. The effective tax rate for the similar period in 2011 was (44.0%). In that period the effective tax rate was higher than the statutory rate due primarily to the write-down of the deferred tax asset due to a change in the UK corporation tax rate.

As at 31 December 2012, the CSi group had total assets of USD 693,050 million (31 December 2011: USD 712,409 million) and total shareholders' equity of USD 15,589 million (31 December 2011: USD 11,135 million).

Off-Balance Sheet arrangements are highlighted in Note 34 – Guarantees and Commitments and Note 35 – Securitisations, Special Purpose Entities and Other Structured Transactions.

## Outlook

While there are certain signs of improvement in the financial markets, CSi expects the current subdued conditions to continue for the medium term, with stability and growth in Europe, and consequent impact on client activity, the most significant concern. CSi continues to respond to this by maintaining client focus and optimising the business model including reducing costs. CSi continues to execute on risk reduction, including reviewing the extent to which business originated outside of the UK will continue to be transacted in CSi in the longer term. Maintaining a strong capital position is a critical priority, including through the transition to the new capital standards which will be required when Basel III is implemented in the EU (expected in 2014)

During 2012, CS group took significant steps to adapt its businesses and organisation to accommodate the new regulatory requirements, changing client demands and the current market environment. Since the beginning of the year 2012, Basel III risk-weighted assets were reduced and the capital position was strengthened as a result of a capital restructuring, and the addition of further capital. In Investment Banking, the CS group substantially adapted its business model and was one of the first global banks to be Basel III compliant. CS group is now generating higher revenues and higher returns on significantly lower risk-weighted assets and on a substantially reduced expense base. CS group has a clearly positioned Fixed Income business, which runs on much lower risk, is capital-efficient and client-oriented, and has an industry-leading Equities franchise, which is highly scalable.

The impact of these actions will provide the CSi group with substantial opportunity for growth and stronger overall performance, particularly when economic and market conditions improve.

## Fair Value Measurement

Financial instruments carried at fair value are categorised under the three levels of the IFRS fair value hierarchy, where Level 3 comprises assets and liabilities for which the inputs for the asset or liability are not based on observable market data (unobservable inputs).

Total Level 3 assets were USD 12.6 billion as at 31 December 2012 (31 December 2011: USD 20.5 billion), which was equivalent to 1.82% of total assets.

Total Level 3 liabilities were USD 11.2 billion as at 31 December 2012 (31 December 2011: USD 15.5 billion), which was equivalent to 1.65% of total liabilities.

The decrease in Level 3 assets was principally driven by asset disposals in legacy businesses, along with the strategy to exit risky positions.

The decrease in Level 3 liabilities was principally driven by buybacks/expiries and transfers out of Level 3 due to improved pricing procedures and liquidity across a range of businesses.

## Dodd Frank Regulations

In December 2011, the Commodity Futures Trading Commission ('CFTC') finalised rules under the Dodd-Frank Act requiring regulatory and public reporting for a wide range of OTC derivatives. In addition, during 2012 the CFTC finalised many of the rules under the Dodd-Frank Act relating to the regulation of swap dealers and major swap participants. Market-making of in-scope products with US clients must be executed via a Swap Dealer. Following the introduction of Dodd Frank legislation (Title 7), CSi was selected to serve as Credit Suisse's principal swap dealing entity. In line with the legislation CSi has registered as a swap dealer with the CFTC and has to comply with the relevant obligations.

## Selected European credit risk exposures

CSi's exposure to certain European countries is summarised in the table below. Gross credit risk exposures, presented on a risk-based view, include loans and loan commitments, investments (such as cash securities and other investments) and all exposures of derivatives (not limited to credit protection purchased and sold), after consideration of legally enforceable netting agreements. Net exposures include the impact of risk mitigation such as Credit Default Swaps ('CDS') and other hedges, guarantees, insurance and collateral (primarily cash and securities). Collateral values applied for the calculation of the net exposure are determined in accordance with risk management policies and reflect applicable margining considerations.

Credit risk exposure to these European countries is managed as part of the overall CS group risk management process. This management includes the use of country limits, and the performance of scenario analyses on a regular basis including analyses on indirect sovereign credit risk exposures arising from exposures to selected European financial institutions.

| 31 December 2012 | Sovereign | | Financial Institutions | | Corporate | |
|---|---|---|---|---|---|---|
| USD Billions | Gross Exposure | Net Exposure | Gross Exposure | Net Exposure | Gross Exposure | Net Exposure |
| Greece | 0.3 | 0.1 | 0.1 | 0.0 | 0.0 | 0.0 |
| Ireland | 0.1 | 0.1 | 0.6 | 0.1 | 1.2 | 1.2 |
| Italy | 5.0 | 0.7 | 2.8 | 0.9 | 0.6 | 0.4 |
| Portugal | 0.1 | 0.0 | 0.1 | 0.0 | 0.1 | 0.1 |
| Spain | 0.0 | 0.0 | 1.4 | 0.5 | 1.3 | 1.0 |
| **Total** | **5.5** | **0.9** | **5.0** | **1.5** | **3.2** | **2.7** |

## Capital Resources

The Bank closely monitors its capital and liquidity position on a continuing basis to ensure ongoing stability and support of its business activities. This approach is consistent with the current capital regime and the forthcoming Basel III capital framework. CS group continues to provide confirmation that it will ensure that the Bank is able to meet its debt obligations and maintain a sound financial position over the foreseeable future.

The Bank is required at all times to monitor and demonstrate compliance with the relevant regulatory capital requirements of the FSA. The Bank has put in place processes and controls to monitor and manage the Bank's capital adequacy. No breaches were reported to the FSA during the year.

In anticipation of the implementation of Basel III, CSi's capital was restructured in February 2012. All classes of preference shares amount to USD 5,235 million, and callable subordinated loans amounting to USD 2,963 million were redeemed and replaced by new participating shares (ordinary shares with no voting rights). Furthermore, USD 202 million of capital was issued to replace subordinated debt that was repaid. As a result of these steps, there was a movement of USD 3,165 million from Tier 2 to Tier 1 capital.

In addition to the capital restructuring, CSi issued capital of USD 2,000 million during the course of 2012 to address regulatory capital requirements.

Changes in capital are set out in Note 28 – Share Capital and Share Premium.

Issues of long-term debt are set out in Note 27 – Long Term Debt.

## Internal Control and Financial Reporting

The directors are ultimately responsible for the effectiveness of internal control in the CSi group. Procedures have been designed for safeguarding assets; for maintaining proper accounting records; and for assuring the reliability of financial information used within the business, and for that provided to external users. Such procedures are designed to manage rather than eliminate the risk of failure to achieve business objectives and can only provide reasonable and not absolute assurance against material misstatement, errors, losses or fraud.

The key procedures that have been established are designed to provide effective internal control within the CSi group. Such procedures for the ongoing identification, evaluation and management of the significant risks faced by the CSi group have been in place throughout the year and up to 28 March 2013, the date of approval of the Consolidated Annual Report for 2012.

Key risks identified by the directors are formally reviewed and assessed at least once a year by the Board, in addition to which key business risks are identified, evaluated and managed by operating management on an ongoing basis by means of procedures such as credit and other authorisation limits and segregation of duties.

The Board also receives regular reports on any risk matters that need to be brought to its attention. Significant risks identified in connection with the development of new activities are subject to consideration by the Board.

There are well-established budgeting procedures in place and reports are presented regularly to the Board detailing the performance of each principal business unit, variances against budget and prior year, and other performance data.

### Committees

The Board delegates certain functions and responsibilities to the following committees:

#### Credit Suisse International Audit Committee

The purpose of the Committee is to:

- review the Internal Audit Plan to ensure its adequacy, as it pertains to the CSi group;
- review reports on systems of accounting, internal controls, and compliance with regulatory and legal requirements, and on litigation;
- review reports on quality and accuracy of financial reporting to external bodies;
- review other Internal Audit, regulatory examination reports and External Audit reports and management letters;
- review with the management and jointly with the Credit Suisse International Risk Committee, significant operational risk matters involving business processes and system infrastructure;
- review with management and jointly with the Credit Suisse International Risk Committee, significant matters of potential reputational risk;
- review the Annual Financial Statements on behalf of the Board; and
- report significant issues to the Board.

The Audit Committee members are Stephen Kingsley (Chair), Noreen Doyle and James Leigh-Pemberton.

In reviewing the CSi Annual Report 2012, the Audit Committee considered critical accounting estimates and judgements including the valuation of Level 3 assets and liabilities, and the recoverability of the deferred tax asset. The Audit Committee additionally considered the projected capital requirements in the next 12 months and, in this context, the continued access to appropriate funding to maintain adequate capital and liquidity positions.

#### Credit Suisse International Risk Committee

The purpose of the Committee is to:

- review and assess the integrity and adequacy of the risk management function of CSi group including processes and organisational structures;
- review and assess the CSi group's credit risk including any large exposures;
- review the Internal Capital Adequacy Assessment Process ('ICAAP') and the Individual Liquidity Adequacy Assessment ('ILAA');
- review with the management and jointly with the Credit Suisse International Audit Committee, significant operational risk matters involving business processes and system infrastructure;
- review and assess the adequacy of the risk measurement methodologies including the Risk Appetite framework;
- review other major risk concentration as deemed appropriate;
- monitor the adequacy of the business continuity program;
- review with management and jointly with the Credit Suisse International Audit Committee, significant matters of potential reputational risk;

- review and advise on risk adjustments to remuneration schemes; and
- report significant issues to the Board.

The Risk Committee members are Noreen Doyle (Chair), Tobias Guldimann and Eric Varvel.

### Credit Suisse International Disclosure Committee

The purpose of the Committee is to ensure compliance with the EU Prospectus and Transparency directives in relation to the listing by the Bank of debt securities on European exchanges. The Committee reviews and updates the Bank's disclosure document and ongoing disclosure requirements so as to provide investors with all such information as may reasonably be required to make an informed assessment of the Bank as an issuer of debt securities.

## Risk management

### Overview

The Bank's risk management process is designed to ensure that there are sufficient independent controls to measure, monitor and control risks in accordance with the Bank's control framework and in consideration of industry best practices. The primary responsibility for risk management within CSi lies with the Bank's senior business line managers. They are held accountable for all risks associated with their businesses, including counterparty risk, market risk, liquidity risk, operational risk, legal risk, settlement risk, country risk and reputational risk.

The Bank's risk management framework is based on transparency, management accountability and independent oversight. As a consequence of the increased complexity of risks, the Bank has defined its risk perspective broadly. Risk management plays an important role in the Bank's business planning process and is strongly supported by senior management and the Board of Directors. The primary objectives of risk management are to protect the Bank's financial strength and reputation, while ensuring that capital is well deployed to support business activities and grow shareholder value. Although the Bank has implemented risk management processes and control systems, it works to limit the impact of negative developments by managing concentrations of risks.

### Risk governance

The prudent taking of risk in line with the Bank's strategic priorities is fundamental to its business as part of a leading global banking group. To meet the challenges in a fast changing industry with new market players and innovative and complex products, the Bank seeks to continuously strengthen the risk function, which is independent of, but closely interacts with, the trading functions to ensure the appropriate flow of information. In the past year, the Bank has made a series of changes to the risk governance framework designed to enhance the effectiveness of controls at all levels of the organisation. These changes include the appointment of a CRO with responsibility for overseeing the Bank's profile across all relevant risk types, the establishment of new risk committees at Board and senior management levels to increase the scrutiny over the Bank's risk exposures, and the introduction of new, more granular limits to provide additional controls over specific businesses, concentrations or particular risks. These changes are described in more detail below.

The Board of Directors has delegated authority to establish more granular limits within the bounds of its overall risk limits to a new UK Investment Banking Risk Management Committee, which is chaired by the Bank CRO and consists of senior risk and business managers. The purpose of the UK Investment Banking Risk Management Committee is to:

- ensure that proper standards for risk management are established;

- define and implement a risk appetite framework covering market, credit and operational risks and make recommendations to the Board on risk appetite;
- review the ICAAP and ILAA and make recommendations to the Bank's Risk committee on capital adequacy;
- allocate risk capital and establish market risk limits for individual businesses within authorities delegated by the Board;
- review the risk portfolio, set/approve limits and ceilings and other appropriate measures to monitor and manage the risk portfolio for the Bank; and
- review and implement appropriate controls over remote booking risk relating to the Bank.

### Risk organisation

Risks arise in all of the Bank's business activities and cannot be completely eliminated, but they are managed through its internal control environment. The Bank's risk management organisation reflects the specific nature of the various risks in order to ensure that risks are managed within limits set in a transparent and timely manner.

The Bank's independent risk management function is headed by the Bank's CRO, who reports jointly to the Bank's CEO and the CRO of CS group. The Bank CRO is responsible for overseeing the Bank's risk profile across all risk types and for ensuring that there is an adequate independent risk management function. The Bank has strengthened the risk management function to provide a more dedicated focus on the risks at an entity level, in addition to the global risk management processes applied by CS group.

The risk management function is responsible for providing risk management oversight and establishing a framework to manage all risk management matters through four primary risk departments: Strategic Risk Management ('SRM') assesses the Bank's overall risk profile on a strategic basis, recommending corrective action where necessary, and is also responsible for market risk management including measurement and limits; Risk Analytics and Reporting ('RAR') is responsible for risk analytics, reporting, risk model validation, systems implementation and policies; Credit Risk Management ('CRM') is responsible for approving credit limits, monitoring and managing individual exposures and assessing and managing the quality of credit portfolios and allowances; and Bank Operational Risk Oversight ('BORO') is responsible for establishing a framework for managing operational risks including ensuring that operational risk policies are consistently implemented and helping understand, assess, and mitigate operational risks. The risk management function also addresses critical risk areas such as business continuity, technology risk and reputational risk management.

Committees are implemented at a senior management level to support risk management. The Risk Processes and Standards Committee is responsible for establishing and approving standards regarding risk management and risk measurement, including methodology and parameters, for all CS group entities, including the Bank. The Credit Portfolio and Provisions Review Committee review the quality of the credit portfolio with a focus on the development of impaired assets and the assessment of related provisions and valuation allowances. The Reputational Risk and Sustainability Committee sets policies and reviews processes and significant cases relating to reputational risks.

### Risk limits

A sound system of risk limits is fundamental to effective risk management. The limits define CSi group's maximum risk appetite given the market environment, business strategy and financial resources available to absorb losses. The Bank uses an Economic Capital ('EC') limit structure to manage overall risk-taking. The overall risk limits for the Bank are set by the Board of Directors and are binding. The Bank's CRO can approve positions that exceed the Board of Directors limits by no more than an approved percentage with any such approval being reported to the Board. Positions that exceed the Board of Directors limits by more than such approved percentage can only be approved by the Bank's CRO and CEO acting jointly.

Within the bounds of the overall risk appetite of the Bank, as defined by the limits set by the Board, the UK Investment Banking Risk Management Committee and Bank CRO are responsible for setting specific limits deemed necessary to control the concentration of risk within individual lines of business. In the past year, the Bank has introduced a range of more granular limits for individual businesses, concentrations and specific risks, such as those booked from remote locations.

Market risk limit measures are typically based on Value at Risk ('VaR') or EC, though they could also include exposure, risk sensitivity and scenario analysis. Credit risk limits include overall limits on portfolio credit quality and a system of individual counterparty credit limits that is used to control concentration risks. These risk limits are binding and generally set to ensure that any meaningful increase in risk exposures is promptly escalated. In addition, the Bank has established thresholds for operational risk losses that trigger additional management action.

The majority of these limits are monitored on a daily basis, though those for which the inherent calculation time is longer (such as for EC or some credit portfolio limits) are monitored on a weekly or monthly basis.

The Bank's financial risk management objectives and policies and the exposure of the CSi group to market risk, credit risk, liquidity risk and currency risk are outlined in Note 39 – Financial Instruments Risk Positions.

### Economic capital and position risk

EC is the core CS group-wide risk management tool and is integrated throughout, being calculated, reported and monitored for both CS group as a whole and for material subsidiaries, such as the Bank. It represents current market practice for measuring and reporting all quantifiable risks and measures risk in terms of economic realities rather than regulatory or accounting rules. It also provides a common terminology for risk across CS group, which increases risk transparency and improves knowledge-sharing. The development and usage of EC methodologies and models have evolved over time without a standardised approach within the industry; therefore comparisons across firms may not be meaningful.

Position Risk, which is a component of the EC framework, is used to assess, monitor and report risk exposures throughout CS group. Position Risk EC is the level of unexpected loss in economic value on the entity's portfolio of positions over a one-year horizon that is exceeded with a given small probability (1% for risk management purposes; 0.03% for capital management purposes).

CS group regularly reviews the EC methodology to ensure the model remains relevant as markets and business strategies evolve.

As at 31 December 2012 the 99% Position risk was USD 2,347 million (2011: USD 2,816 million) for CSi group which was within the agreed limit set by Board of Directors[1].

## Subsidiary Undertakings and Branches

Credit Suisse First Boston International Warrants Limited was liquidated on 2 November 2012.

Credit Suisse First Boston Holding BV was liquidated on 12 December 2012.

Refer to Note 21 – Significant Subsidiaries.

## Dividends

No dividends were paid or are proposed for the year ended 31 December 2012 (2011: USD Nil).

[1] Unaudited

## Directors

The names of the directors as at the date of this report are set out on page 1. Changes in the directorate since 31 December 2011 and up to the date of this report are as follows:

| **Appointment** | |
|---|---|
| Stephen Kingsley | 29 March 2012 |
| Chris Carpmael | 29 March 2012 |
| Gael de Boissard | 28 March 2013 |
| Michael Hodgson | 28 March 2013 |

| **Resignation** | |
|---|---|
| Fawzi Sami Kyriakos-Saad | 22 November 2012 |
| Costas Michaelides | 6 December 2012 |
| Rudolf Bless | 6 December 2012 |

None of the Directors who held office at the end of the financial year was directly beneficially interested, at any time during the year, in the shares of the Bank. Directors of the Bank benefited from qualifying third party indemnity provisions in place during the financial year and at the date of this report.

## Disclosure of Information to Auditors

The directors who held office at the date of approval of this Directors' Report confirm that, so far as they are each aware, there is no relevant audit information of which the CSi group's auditors are unaware and each director has taken all the steps that he ought to have taken as a director to make himself aware of any relevant audit information and to establish that the CSi group's auditors are aware of that information.

## Employment of Disabled Persons

The CSi group adopts the CS group's policies relating to the employment of disabled persons and gives full and fair consideration to disabled persons in employment applications, training and career development including those who become disabled during their period of employment.

The CS group has a Disability Interest Forum in place as a UK initiative. This forum:

- provides a support network;
- facilitates information sharing for those with a disability or those caring for a family member or friend with a disability; and
- invites all those who want to participate and who have an interest.

The forum raises awareness of issues related to disability and promotes an environment where disabled employees are supported and are given the opportunity to reach their full potential.

## Donations

During the year the CSi group made USD 204 (2011: USD 11,450) of charitable donations. There were no political donations made by the CSi group during the year (2011: USD Nil).

## Auditors

Pursuant to Section 487 of the Companies Act 2006, the auditors will be deemed to be reappointed and KPMG Audit Plc will therefore continue in office.

## Subsequent Events

In the UK budget announcement of 20 March 2013, the UK government announced its intention to further reduce the UK corporation tax rate to 20% with effect from 1 April 2015. This tax rate reduction is expected to be substantively enacted in 2014. The effect of this tax rate reduction upon CSi group's deferred tax balance cannot be reliably quantified at this stage.

Also in the UK budget announcement of 20 March 2013, the UK Bank Levy rate from 1 January 2014 will be 14.2 basis points for short term liabilities and 7.1 basis points for long term liabilities.

## Statement of Directors' Responsibilities

The Directors are responsible for preparing the Annual Report of the CSi group and the Bank in accordance with applicable law and regulations.

Company law requires the directors to prepare group and parent company financial statements for each financial year. Under that law they are required to prepare the group financial statements in accordance with IFRSs as adopted by the EU and applicable law and have elected to prepare the parent company financial statements on the same basis.

Under company law the Directors must not approve the financial statements unless they are satisfied that they give a true and fair view of the state of affairs of the CSi group and Bank and of their profit or loss for that period. In preparing each of the CSi group and Bank financial statements, the Directors are required to:

- select suitable accounting policies and then apply them consistently;
- make judgements and estimates that are reasonable and prudent;
- state whether they have been prepared in accordance with IFRS as adopted by the EU; and
- prepare the financial statements on the going concern basis unless it is inappropriate to presume that the CSi group and the Bank will continue in business.

The Directors are responsible for keeping adequate accounting records that are sufficient to show and explain the CSi group and Bank's transactions and disclose with reasonable accuracy at any time the financial position of the CSi group and Bank and enable them to ensure that its financial statements comply with the Companies Act 2006. They have general responsibility for taking such steps as are reasonably open to them to safeguard the assets of the CSi group and to prevent and detect fraud and other irregularities.

The directors are responsible for the maintenance and integrity of the corporate and financial information included on the Bank's website. Legislation in the UK governing the preparation and dissemination of financial statements may differ from legislation in other jurisdictions.

Signed on behalf of the Board of Directors on 28 March 2013 by:

# Independent Auditor’s Report to the Members of Credit Suisse International

We have audited the financial statements of Credit Suisse International for the year ended 31 December 2012 set out on pages 18 to 131. The financial reporting framework that has been applied in their preparation is applicable law and International Financial Reporting Standards (IFRSs) as adopted by the EU and, as regards the parent company (“the Bank”) financial statements, as applied in accordance with the provisions of the Companies Act 2006.

This report is made solely to the Bank's members, as a body, in accordance with Chapter 3 of Part 16 of the Companies Act 2006. Our audit work has been undertaken so that we might state to the Bank's members those matters we are required to state to them in an auditor's report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the Bank and the Bank's members, as a body, for our audit work, for this report, or for the opinions we have formed.

## Respective Responsibilities of Directors and Auditors

As explained more fully in the Directors' Responsibilities Statement set out on page 15, the directors are responsible for the preparation of the financial statements and for being satisfied that they give a true and fair view. Our responsibility is to audit, and express an opinion on, the financial statements in accordance with applicable law and International Standards on Auditing (UK and Ireland). Those standards require us to comply with the Auditing Practices Board's (APB's) Ethical Standards for Auditors.

## Scope of the audit of the financial statements

A description of the scope of an audit of financial statements is provided on the Financial Reporting Council’s website at www.frc.org.uk/auditscopeukprivate.

## Opinion on financial statements

In our opinion:

- the financial statements give a true and fair view of the state of the CSi group’s and of the Bank’s affairs as at 31 December 2012 and of the CSi group’s loss for the year then ended;
- the CSi group financial statements have been properly prepared in accordance with IFRS as adopted by the EU;
- the Bank financial statements have been properly prepared in accordance with IFRS as adopted by the EU and as applied in accordance with the provisions of the Companies Act 2006; and
- the financial statements have been prepared in accordance with the requirements of the Companies Act 2006 and, as regards the CSi group financial statements, Article 4 of the IAS Regulation.

## Opinion on other matters prescribed by the Companies Act 2006

In our opinion the information given in the Directors’ Report for the financial year for which the financial statements are prepared is consistent with the financial statements.

## Matters on which we are required to report by exception

We have nothing to report in respect of the following matters where the Companies Act 2006 requires us to report to you if, in our opinion:

- adequate accounting records have not been kept by the Bank, or returns adequate for our audit have not been received from branches not visited by us; or
- the Bank financial statements are not in agreement with the accounting records and returns;
- certain disclosures of Directors' remuneration specific by law are not made; or
- we have not received all the information and explanations we require for our audit.

Refer to Note 28 – Share Capital and Share Premium for significant non-cash transactions.

## Notes to the consolidated financial statements

# Notes to the Financial Statements for the Year ended 31 December 2012

## 1. General

Credit Suisse International ('CSi' or the 'Bank') is a bank domiciled in the United Kingdom. The address of the Bank's registered office is One Cabot Square, London, E14 4QJ. The Consolidated Financial Statements for the year ended 31 December 2012 comprise CSi and its subsidiaries (together referred to as the 'CSi group').

## 2. Significant Accounting Policies

### a) Statement of compliance

Both the Bank financial statements and the CSi group financial statements have been prepared on a going concern basis and approved by the Directors in accordance with International Financial Reporting Standards as adopted by the EU ('Adopted IFRS'). On publishing the parent company financial statements here together with the CSi group financial statements, the Bank is taking advantage of the exemption in s408 of the Companies Act 2006 not to present its individual Statement of Income and related notes.

### b) Basis of preparation

The Consolidated Financial Statements are presented in United States dollars (USD) rounded to the nearest million. They are prepared on the historical cost basis except that the following assets and liabilities are stated at their fair value: derivative financial instruments, financial instruments held for trading, financial instruments that are hedged as part of a designated hedging relationship and financial instruments designated by the CSi group as at fair value through profit or loss.

The preparation of financial statements in conformity with adopted IFRS requires management to make judgements, estimates and assumptions that affect the application of policies and reported amounts of assets and liabilities, income and expenses. The estimates and associated assumptions are based on historical experience and various other factors that are believed to be reasonable under the circumstances, the results of which form the basis of making the judgements about carrying values of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates. Critical accounting estimates and judgements applied to these Financial Statements are set out in Note 3 – Critical Accounting Estimates and Judgements in Applying Accounting Policies.

The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the period in which the estimate is revised if the revision affects only that period or in the period of revision and future periods if the revision has a significant effect on both current and future periods.

The CSi group and Bank have unrestricted and direct access to funding sources from CSG. After making enquiries of the CSG, the Directors of the Bank have received confirmation that CSG will ensure that the Bank maintains a sound financial position and is able to meet its debt obligations for the foreseeable future. Accordingly the Directors have prepared these accounts on a going concern basis.

### Standards and Interpretations effective in the current period

The CSi group has adopted the following amendments in the current year:

- Amendments to IFRS 7, "Financial Instruments-Disclosures" – Transfers of Financial Assets: The amendments improved the understanding of transfer transactions of financial assets (for example, securitisations) by users of financial statements, including understanding the possible effects of any risks that may remain with the entity that transferred the assets. The amendments also require additional disclosures if a disproportionate amount of transfer transactions are undertaken around the end of a reporting period. The amendments were effective for annual periods beginning on or after 1 July 2011. As the amendments are for disclosures only, the adoption of the standard did not have a material impact on the CSi group's financial position, results of operation or cash flows.

### Standards and Interpretations endorsed by the EU and not yet effective

The CSi group is not yet required to adopt the following standards and interpretations which are issued by the IASB but not yet effective.

- Amendments to IAS 1 Presentation of Items of Other Comprehensive Income: In June 2011, the IASB issued "Presentation of Items of Other Comprehensive Income" (Amendments to IAS 1). The amendments require entities to group together items within Other Comprehensive Income that will and will not subsequently be reclassified to the profit or loss section of the income statement. The amendments also reaffirm existing requirements that items in Other Comprehensive Income and profit or loss should be presented as either a single statement or two consecutive statements. The amendments are effective for annual periods beginning on or after 1 July 2012. As the amendments impact presentation only, they will not have a material impact on the CSi group's financial position, results of operations or cash flows.

- Amendments to IAS 19 Employee Benefits: In June 2011, the IASB issued Amendments to IAS 19 "Employee Benefits" (IAS 19). Among other changes, the amendments eliminate the option that allowed an entity to defer the recognition of changes in net defined benefit liability and amend the disclosure requirements for defined benefit plans and multi-employer plans. The amendments are effective for annual periods beginning on or after 1 January 2013. The CSi group participates in defined benefit plans that are CS group schemes, in which the CSi group is not the sponsoring entity, therefore no retirement benefit obligation is recognised in the Statement of Financial Position and defined contribution accounting is applied. As a result, the application of IAS19R will not have a material impact on CSi group's financial position, results of operation or cash flows.

- IFRS 10 Consolidated Financial Statements: In May 2011, the IASB issued IFRS 10, "Consolidated Financial Statements" (IFRS 10). The objective of IFRS 10 is to establish principles for the presentation and preparation of consolidated financial statements when an entity controls one or more other entities. IFRS 10 builds on existing principles by identifying the concept of control as the determining factor in whether an entity should be included within the consolidated financial statements of the parent company. The standard provides additional guidance to assist in the determination of control where this may be difficult to assess. IFRS 10 is effective for annual periods beginning on or after 1 January 2013, however, the EU requires adoption for annual periods beginning on or after 1 January 2014. The CSi group is currently evaluating the impact of adopting IFRS 10.

- IFRS 11 Joint Arrangements: In May 2011, the IASB issued IFRS 11 "Joint Arrangements" (IFRS 11). IFRS 11 specifies that a party to a joint arrangement determines the type of joint arrangement in which it is involved by assessing its rights and obligations. IFRS 11 is effective for annual periods beginning on or after 1 January 2013, however, the EU requires adoption for annual periods beginning on or after 1 January 2014. The CSi group is currently evaluating the impact of adopting IFRS 11.

- IFRS 12 Disclosure of Interests in Other Entities: In May 2011, the IASB issued IFRS 12 "Disclosures of Interests in Other Entities" (IFRS 12). IFRS 12 requires entities to disclose information that enables users of the financial statements to evaluate the nature of and any associated risks of its interests in other entities and the effects of those interests on its financial position, financial performance and cash flows. IFRS 12 requires certain disclosures, for subsidiaries, joint arrangements and associates and introduces new requirements for unconsolidated structured entities. IFRS 12 is effective for annual periods beginning on or after 1 January 2013, however, the EU requires adoption for annual periods beginning on or after 1 January 2014. As IFRS 12 requires disclosures only it will not have a material impact on the CSi group's financial position, results of operation or cash flows.

- IFRS 13 Fair Value Measurement: In May 2011, the IASB issued IFRS 13 "Fair Value Measurement" (IFRS 13). IFRS 13 defines fair value, sets out a framework for measuring fair value and requires certain disclosures about fair value measurements. IFRS 13 applies to IFRSs that require or permit fair value measurements or disclosures about fair value measurements, except in specified circumstances. IFRS 13 is effective for annual periods beginning on or after 1 January 2013. The adoption of IFRS 13 on 1 January 2013 resulted in a charge to the income statement of USD 104m as a result of a change in application of valuation methodology in marking instruments within the bid-offer spread.

- IFRS 7 Disclosures- Offsetting Financial Assets and Financial Liabilities: In December 2011, the IASB issued amendments to IFRS 7 "Disclosures – Offsetting Financial Assets and Financial Liabilities" (IFRS 7). The amendments require disclosures about the effect or potential effects of offsetting financial assets and financial liabilities and related arrangements on an entity's financial position. The amendments are effective for annual periods beginning on or after 1 January 2013. As the amendment requires disclosures only it will not have a material impact on the CSi group's financial position, results of operations or cash flows.

- IAS 32 Offsetting Financial Assets and Financial Liabilities: In December 2011, the IASB issued amendments to IAS 32 "Offsetting Financial Assets and Financial Liabilities" (IAS 32). The amendments address inconsistencies in current practice when applying the offsetting criteria in IAS 32 'Financial Instruments – Presentation'. The amendments are effective for annual periods beginning on or after 1 January 2014. The CSi group is currently evaluating the impact of adopting the IAS 32 amendments.

### Standards and Interpretations not endorsed by the EU and not yet effective

The CSi group is not yet required to adopt the following standards and interpretations which are issued by the IASB but not yet effective and have not yet been endorsed by the EU.

- IFRS 9 Financial Instruments: In November 2009 the IASB issued IFRS 9 "Financial Instruments" (IFRS 9) covering the classification and measurement of financial assets which introduces new requirements for classifying and measuring financial assets. In October 2010, the IASB reissued IFRS 9, which incorporated new requirements on the accounting for financial liabilities. The effective date of IFRS 9 was revised in December 2011, making it applicable for annual periods beginning 1 January 2015. The CSi group is currently evaluating the impact of adopting IFRS 9.

- Improvements to IFRS 2012: In May 2012,The IFRS issued "Annual Improvements to IFRSs 2009-2011 Cycle" (Improvements to IFRS), which contain numerous amendments to IFRS that the IASB considers non-urgent but necessary. The Improvements to IFRS comprise amendments that result in accounting changes for presentation recognition or measurement purposes, as well as terminology or editorial amendments related to a variety of individual standards. The Improvements to IFRS are required to be applied retrospectively for annual periods beginning on or after 1 January 2013. The CSi group is currently evaluating the impact of the amendments.

- Transition guidance for IFRS 10, IFRS 11 and IFRS 12: In June 2012, the IASB issued "Consolidated Financial Statements, Joint Arrangements and Disclosure of Interest in Other Entities; Transition Guidance" (Amendments to IFRS 10, IFRS 11 and IFRS 12). The amendments are intended to provide additional transition relief in IFRS 10, IFRS 11 joint

Arrangement and IFRS 12 Disclosure of Interest in Other Entities, by "limiting the requirement to provide adjusted comparative information to only the preceding comparative period". Also, amendments were made to IFRS 11 and IFRS 12 to eliminate the requirement to provide comparative information for periods prior to the immediately preceding period. The Amendments to IFRS 10, IFRS 11 and IFRS 12 are effective for annual periods beginning on or after 1 January 2013. The CSi group will adopt the requirements of this amendment when the provision of IFRS 10, IFRS 11 and IFRS 12 are adopted. The CSi group is currently evaluating the impact of adopting the Amendments to IFRS 10, IFRS 11 and IFRS 12.

- Investment Entities (Amendments to IFRS 10, IFRS 12 and IAS 27): In October 2012, the IASB issued "Investment Entities Amendments to IFRS 10, IFRS 12 and IAS 27" (Investment Entities Amendment). Under IFRS 10, reporting entities were required to consolidate all investees they control, however the Investment Entities Amendment provides an exception and requires investment entities to measure particular subsidiaries at fair value through profit or loss, rather than consolidate them. The Investment Entities Amendment sets out disclosure requirements for investment entities. The Investment Entities Amendment is effective from 1 January 2014 with early adoption permitted. The CSi group is currently evaluating the impact of adopting the Investment Entities Amendment.

The accounting policies have been applied consistently by CSi group entities.

Certain reclassifications have been made to the prior year Consolidated Financial Statements of the CSi group to conform to the current year's presentation and had no impact on net income/ (loss) or total shareholders' equity.

### c) Basis of consolidation

The Consolidated Financial Statements include the results and positions of the CSi group and its subsidiaries (including special purpose entities). The Consolidated Financial Statements include the Statement of Income, Statement of Financial Position, Statement of Cash Flows, Statement of Changes in Equity and the related Notes of the CSi group.

A subsidiary is an entity in which the CSi group holds, directly or indirectly, more than 50% of the outstanding voting rights, or which it otherwise has the power to control. Control is achieved where the CSi group has the power to govern the financial and operating policies of an investee entity so as to obtain benefits from its activities. In assessing control, the potential voting rights that presently are exercisable are taken into account. The results of subsidiaries acquired are included in the consolidated financial statements from the date that control commences until the date that control ceases. The CSi group reassesses consolidation status at least every quarterly reporting date.

The CSi group also consolidates subsidiaries when the substance of the relationship between the CSi group and the subsidiary indicates that the subsidiary is controlled by the CSi group in accordance with the Standing Interpretations Committee Interpretation (SIC) No. 12, 'Consolidation – Special Purpose Entities' (SIC 12). The acquisition method of accounting is used to account for the acquisition of subsidiaries. The cost of an acquisition is measured at the fair value of the assets given, equity instruments issued and liabilities incurred or assumed. Acquisition related costs such as legal or consulting fees are expensed in the period in which they are incurred. The excess of the cost of an acquisition over the CSi group's share of the fair value of the identifiable net assets acquired is recorded as goodwill. If the acquisition cost is below the fair value of the identifiable net assets (negative goodwill), a gain may be reported in other income.

The effects of intercompany transactions and balances have been eliminated in preparing the Consolidated Financial Statements. Noncontrolling interests are presented in the Consolidated Statement of Financial Position as a separate component of equity. Net profit attributable to noncontrolling interests is shown separately in the Consolidated Statement of Income.

### d) Equity method investments

An equity method investment is an entity in which the CSi group has significant influence, but not control, over the operating and financial management policy decisions. This is generally demonstrated by the CSi group holding in excess of 20%, but no more than 50%, of the voting rights. In assessing significant influence, potential voting rights that are presently exercisable are taken into account. Other factors that are considered in determining whether the CSi group has significant influence over another entity include representation on the board of directors, the interchange of managerial personnel and material intercompany transactions between the CSi group and the entity. Consideration of those factors might indicate that the CSi group has significant influence over another entity even though the CSi group's investment is for less than 20% of the voting rights.

Equity method investments are initially recorded at cost and increased (or decreased) each year by the CSi group's share of the post-acquisition net income (or loss), or other movements reflected directly in the equity of the equity method investment. Goodwill arising on the acquisition of an equity method investment is included in the carrying amount of the investment. When the CSi group's share of losses in an equity method investment equals or exceeds the recorded share of profits, including any other unsecured long-term receivables, the CSi group does not recognise further losses, unless it has incurred obligations or made payments on behalf of the entity.

### e) Foreign currency

The Bank's functional currency is United States Dollars ('USD'). Transactions denominated in currencies other than the functional currency of the reporting entity are translated at the foreign exchange rate ruling at the date of the transaction. Monetary assets and liabilities denominated in foreign currencies at the reporting date are translated to USD at the foreign exchange rate ruling at that date. Foreign exchange differences arising from translation are recognised in the Consolidated Statement of Income. Non-monetary assets and liabilities denominated in foreign currencies at the reporting date are not revalued for movements in foreign exchange rates.

Assets and liabilities of CSi group companies with functional currencies other than USD are translated to USD at foreign exchange rates ruling at the Statement of Financial Position date. The revenue and expenses of these CSi group companies are translated to USD at the average foreign exchange rates for the year. The resulting translation differences are recognised directly in a separate component of equity. On disposal, these translation differences are reclassified to the Consolidated Statement of Income as part of gain or loss on disposal.

### f) Cash and due from banks

For the purpose of preparation and presentation of Consolidated Statement of Cash Flows, cash and cash equivalents comprise the components of cash and due from banks that are short term, highly liquid instruments with original maturities of three months or less which are subject to an insignificant risk of changes in their fair value and that are held or utilised for the purpose of cash management.

Where cash is received or deposited as collateral, the obligation to repay or the right to receive that collateral is recorded in 'Other assets' or 'Other liabilities'.

The CSi group holds money on behalf of clients in accordance with the client money rules of the UK's FSA. This money is included within 'Cash and due from banks' on the Statement of Financial Position and the corresponding liability is included in 'Other liabilities'.

### g) Securities purchased or sold under resale or repurchase agreements

Securities purchased under resale agreements ('reverse repurchase agreements') and securities sold under repurchase agreements ('repurchase agreements') do not constitute economic sales and are therefore treated as collateralised financing transactions. In reverse repurchase agreements, the cash advanced, including accrued interest is recognised on the Consolidated Statement of Financial Position as an asset. In repurchase agreements, the cash received, including accrued interest is recognised on the Consolidated Statement of Financial Position as a liability.

Securities received under reverse repurchase agreements and securities delivered under repurchase agreements are not recognised or derecognised unless all or substantially all the risks and rewards are obtained or relinquished. The CSi group monitors the market value of the securities received or delivered on a daily basis and provides or requests additional collateral in accordance with the underlying agreements.

Interest earned on reverse repurchase agreements and interest incurred on repurchase agreements is recognised on an effective yield basis and recorded as interest income or interest expense.

### h) Securities borrowing and lending transactions

Securities borrowing and securities lending transactions are generally entered into on a collateralised basis. The transfer of the securities themselves is not reflected on the Consolidated Statement of Financial Positions unless the risks and rewards of ownership are also transferred. If cash collateral is advanced or received, securities borrowing and lending activities are recorded at the amount of cash collateral advanced (cash collateral on securities borrowed) or received (cash collateral on securities lent). The sale of securities received in a security borrowing transaction results in the recognition of a trading liability (short sale).

The CSi group monitors the market value of the securities borrowed and lent on a daily basis and provides or requests additional collateral in accordance with the underlying agreements. Fees are recognised on an accrual basis and interest received or paid is recognised on an effective yield basis and recorded as interest income or interest expense.

### i) Derivative financial instruments and hedging

All freestanding derivative contracts are carried at fair value in the Consolidated Statement of Financial Position regardless of whether these instruments are held for trading or risk management purposes.

Derivatives classified as trading assets and liabilities include those held for trading purposes and those used for risk management purposes that do not qualify for hedge accounting. Derivatives held for trading purposes arise from proprietary trading activity and from customer-based activity, with changes in fair value included in 'Net gains/(losses) from financial assets/liabilities at fair value through profit or loss'. Derivative contracts, which are both designated and qualify for hedge accounting, are reported in the Consolidated Statement of Financial Position as 'Other assets' or 'Other liabilities' and hedge accounting is applied.

The fair value recorded for derivative instruments does not indicate future gains or losses, but rather the unrealised gains and losses from valuing all derivatives at a particular point in time. The fair value of exchange-traded derivatives is typically derived from observable market prices and/or observable market parameters. Fair values for OTC derivatives are determined on the basis of internally developed proprietary models using various input parameters. Where the input parameters cannot be validated using observable market data, reserves are established for unrealised gains or losses evident at the inception of the contracts so that no gain or loss is recorded at inception. Such reserves are amortised to income over the life of the instrument or released into income when observable market data becomes available. For further information on fair value determination of derivative instruments, refer to Note 36 – Financial Instruments.

### Embedded derivatives

When derivative features embedded in certain contracts that meet the definition of a derivative are not considered clearly and closely related to the host instrument, the embedded feature will be accounted for separately at fair value, with changes in fair value recorded in the Consolidated Statement of Income unless, consistent with the provisions of IAS 39, the fair value option is elected (as described in Note 2 (j) below) or the entire hybrid instrument is classified as held for trading, in which case the entire instrument is recorded at fair value with changes in fair value recorded in the Consolidated Statement of Income. Once separated, the derivative is recorded in the same line in the Consolidated Statement of Financial Positions as the host instrument.

### j) Financial assets and liabilities at fair value through profit or loss

The CSi group classifies certain financial assets and liabilities as either held for trading or designated at fair value through profit or loss. Financial assets and liabilities with either classification are carried at fair value. Fair value is defined as the amount for which an asset could be exchanged or a liability settled between knowledgeable, willing parties in an arm's length transaction other than an involuntary liquidation or distressed sale. Quoted market prices are used when available to measure fair value. In cases where quoted market prices are not available, fair value is estimated using valuation techniques consistent with those used in the financial markets. Where the input parameters cannot be validated using observable market data, reserves are established for unrealised gains or losses evident at the inception of the contracts so that no gain or loss is recorded at inception. Such reserves are amortised to income over the life of the instrument or released into income when observable market data becomes available.

Related realised and unrealised gains and losses are included in 'Net gains/ (losses) from financial assets/liabilities at fair value through profit or loss'.

### Trading financial assets and financial liabilities at fair value through profit or loss

Trading financial assets and financial liabilities include mainly debt and equity securities, derivative instruments, loans and precious metals. These assets and liabilities are included as part of the trading portfolio based on management's intention to sell the assets or repurchase the liabilities in the near term, and are carried at fair value.

### Financial instruments designated as held at fair value through profit or loss

Financial assets and liabilities are only designated as held at fair value through profit or loss if the instruments contain a substantive embedded derivative, or when doing so results in more relevant information, because either:

(i) it eliminates or significantly reduces an inconsistency in measurement or recognition (sometimes referred to as an 'accounting mismatch') that would otherwise arise from measuring assets or liabilities or recognising the gains and losses on them on different bases. This election is used for instruments that would otherwise be accounted for under an accrual method of accounting where their economic risks are hedged with derivative instruments that require fair value accounting. This election eliminates or significantly reduces the measurement mismatch between accrual accounting and fair value accounting;

(ii) a group of financial assets, financial liabilities or both is managed and its performance is evaluated on a fair value basis, in accordance with a documented risk management or investment strategy, and information about the CSi group is provided internally on that basis to the entity's key management personnel. This election is used for instruments purchased or issued by business units that manage their performance on a fair value basis. For all instruments elected under this criterion, the business maintains a documented strategy that states that these instruments are risk managed on a fair value basis. Additionally, management relies upon the fair value of these instruments in evaluating the performance of the business.

The Fair Value Option has been applied to certain debt instruments, equity securities and loans and the related financial assets and financial liabilities are presented as 'Financial assets designated at fair value through profit or loss' or 'Financial liabilities designated at fair value through profit or loss' are recognised in 'Net gains/ (losses) from financial assets/liabilities at fair value through profit or loss'. Once designated this election is irrevocable. All fair value changes related to these financial instruments held at fair value through profit or loss are recognised in 'Net gains/(losses) from financial assets/liabilities at fair value through profit or loss'.

## k) Recognition and derecognition

### Recognition

The CSi group recognises financial instruments on its Consolidated Statement of Financial Position when the CSi group becomes a party to the contractual provisions of the instrument.

### Regular-way securities transactions

A regular-way purchase or sale is a purchase or sale of a financial asset under a contract whose terms require delivery of the asset within the time frame established generally by regulation or convention in the marketplace concerned. The CSi group recognises regular-way purchases or sales of financial assets at the settlement date unless the instrument is a derivative or designated at fair value through profit or loss, in which case trade date accounting applies.

### Derecognition

The CSi group enters into transactions where it transfers assets recognised on its Consolidated Statement of Financial Position, but retains either all risks and rewards of the transferred assets or a portion of them. If all or substantially all risks and rewards are retained, the transferred assets are not derecognised from the Consolidated Statement of Financial Position. Transactions where substantially all risk and rewards are retained include securities purchased or sold under repurchase agreements, securities borrowing and lending transactions, and sales of financial assets with concurrent return swaps on the transferred assets.

In transactions where the CSi group neither retains nor transfers substantially all risks and rewards of ownership of a financial asset, it derecognises the asset if control over the asset is lost. The rights and obligations retained in the transfer are recognised separately as assets and liabilities as appropriate. In transfers where control over the asset is retained, the CSi group continues to recognise the asset to the extent of its continuing involvement, determined by the extent to which it is exposed to changes in the value of the transferred asset.

The CSi group derecognises a financial liability when its contractual obligations are discharged or cancelled or expire. Where the CSi group has a financial liability and a financial instrument is exchanged for a new financial instrument with the same counterparty, which is substantially different, or when an existing financial instrument classified as a financial liability is substantially modified, the old financial instrument is deemed to be extinguished and a new financial liability is recognised. Any gain or loss due to derecognition of the extinguished instrument is recorded in the Consolidated Statement of Income. Where a modification and not an extinguishment is deemed to have occurred, the difference is adjusted to the carrying value of the new instrument and reclassified into income using the effective interest method.

### Securitisation

The CSi group securitises assets, which generally results in the sale of these assets to special purpose entities, which in turn issue securities to investors. The transferred assets may qualify for derecognition in full or in part, under the above mentioned policy on derecognition of financial assets.

Interests in securitised financial assets may be retained in the form of senior or subordinated tranches, interest only strips or other residual interests (collectively referred to as 'retained interests'). Provided the CSi group's retained interests do not result in consolidation of the special purpose entity, nor in continued recognition of the transferred assets, these retained tranches are typically recorded in 'Trading financial assets at fair value through profit or loss'. Gains or losses on securitisation are recognised in profit or loss. The line item in the Consolidated Statement of Income, in which the gain or loss is presented, will depend on the nature of the asset securitised.

## l) Other loans and receivables

Other loans and receivables are initially recorded at fair value, plus any directly attributable transaction costs and subsequently are amortised on an effective interest method, less impairment losses. In the event of an impairment loss the effective interest will be re-estimated.

When calculating the effective interest, the CSi group estimates cash flows considering all contractual terms of the financial instruments including premiums, discounts, fees and transactions costs but not future credit losses.

### Impairment on other loans and receivables

The CSi group assesses at each statement of financial position date whether there is objective evidence that a significant loan position or a portfolio of loans is impaired. A significant individual loan position or portfolio of loans is impaired and impairment losses are incurred if, and only if, there is objective evidence of impairment as a result of one or more loss events that occurred after the initial recognition of the asset and prior to the statement of financial position date ('a loss event') and that loss event or events has had an impact on the estimated future cash flows of the financial asset or the portfolio that can be reliably estimated.

All individually significant loans are assessed for specific impairment. Individually significant loans found not to be impaired are then collectively assessed for impairment that has incurred, but not yet been identified. Loans that are not individually significant are assessed collectively for impairment. Loans subject to collective impairment testing are grouped to loan portfolios on the basis of similar risk, industry or country rating. Objective evidence that an individual loan is impaired can include significant financial difficulty of the borrower, default or delinquency by the borrower and indications that a borrower will enter bankruptcy. Objective evidence that a loan portfolio is impaired can include changes of the payment status of borrowers in the CSi group or economic conditions that correlate with defaults in the CSi group.

Many factors can affect the CSi group's estimate of the impairment losses on loans, including volatility of default probabilities, rating migrations and loss severity. The estimate of the component of the allowance for specifically identified credit losses on impaired loans is based on a regular and detailed analysis of each loan in the portfolio considering collateral and counterparty risk. For certain non-collateral dependent impaired loans, impairment charges are measured using the present value of estimated future cash flows discounted at the asset's original effective interest rate. For collateral dependent impaired loans, impairment charges are measured using the value of the collateral. The estimation of impairment for a loan portfolio involves applying historical loss experience, adjusted to reflect current market conditions, to homogeneous loans based on risk rating and product type.

The estimation of impairment for a loan portfolio involves applying historical loss experience, adjusted to reflect current market conditions, to homogeneous loans based on risk rating and product type. The amount of the loss is recognised in the Consolidated Statement of Income in 'Provision for credit losses'. The methodology and assumptions used for estimating future cash flows are reviewed regularly to reduce any differences between loss estimates and actual loss experience. An allowance for impairment is reversed only if the amount of the impairment loss decreases and the decrease can be objectively related to an event occurring after the impairment was recognised.

### Write-off of loans

When it is considered certain that there is no realistic prospect of recovery and all collateral has been realised or transferred to the CSi group, the loan and any associated allowance is written off. Any repossessed collateral is initially measured at fair value. The subsequent measurement will depend on the nature of the collateral.

### Renegotiated loans

Where possible, the CSi group seeks to restructure loans rather than to take possession of collateral. This may involve extending the payment arrangements and the agreement of modified loan conditions. Once the terms have been renegotiated any impairment is measured using the effective interest rate as calculated before the modification of terms and the loan is no longer considered past due. Management continuously reviews renegotiated loans to ensure that all criteria are met and that future payments are likely to occur. The loans continue to be subject to an individual or collective impairment assessment, calculated using the loan's original effective interest rate.

### Loan commitments

Certain loan commitments are classified as financial assets/liabilities at fair value through profit or loss in accordance with the policy discussed above. All other loan commitments remain off-balance sheet. If such commitments are considered onerous, a provision is raised in accordance with IAS 37, "Provisions, Contingent Liabilities and Contingent Assets" (IAS 37) based upon management's best estimate of the expenditure required to settle the obligation.

### m) Netting

The CSi group only offsets financial assets and liabilities and presents the net amount on the Statement of Financial Position where it:

- currently has a legally enforceable right to set off the recognised amounts; and
- intends either to settle on a net basis, or to realise the asset and liability simultaneously.

In many instances the CSi group's net position on multiple transactions with the same counterparty is legally protected by Master Netting Agreements. Such agreements normally ensure that the net position is settled in the event of default of either counterparty and effectively limits credit risk on gross exposures. However, if the transactions themselves are not intended to be settled net, nor will they settle simultaneously, it is not permissible under IAS 32, to offset transactions falling under Master Netting Agreements.

### n) Income tax

Income tax recognised in the Statement of Income for the year comprises current and deferred taxes. Income tax is recognised in the Consolidated Statement of Income except to the extent that it relates to items recognised directly in equity, in which case the income tax is recognised in equity. For items initially recognised in equity and subsequently recognised in the Consolidated Statement of Income, the related income tax initially recognised in equity is also subsequently recognised in the Consolidated Statement of Income.

Current tax is the expected tax payable on the taxable income for the year and includes any adjustment to tax payable in respect of previous years. Current tax is calculated using tax rates enacted or substantively enacted at the reporting date.

For UK corporation tax purposes the CSi may surrender or claim certain losses from another UK group company. The surrendering company will be compensated in full for the value of the tax losses surrendered to the claimant company.

Deferred tax is provided using the Statement of Financial Position liability method, providing for temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and their tax-base. The amount of deferred tax provided is based on the amount at which it is expected to recover or settle the carrying amount of assets and liabilities on the Consolidated Statement of Financial Position, using tax rates that are expected to be applied to the temporary differences when they reverse, based on the laws that have been enacted or substantively enacted at the Consolidated Statement of Financial Position date.

Deferred tax is not recognised for the following temporary differences: the initial recognition of assets or liabilities in a transaction that is not a business combination and that affects neither accounting nor taxable profit or loss and differences relating to investments in subsidiaries and jointly controlled entities to the extent that it is probable that they will not reverse in the foreseeable future. In addition, deferred tax is not recognised for taxable temporary differences arising on the initial recognition of goodwill.

A deferred tax asset is recognised only to the extent that it is probable that future taxable profits will be available against which the asset can be utilised. Deferred tax assets are reduced to the extent that it is no longer probable that the related tax benefit will be realised. Tax assets and liabilities of the same type (current or deferred) are offset when they arise from the same tax reporting group, they relate to the same tax authority, the legal right to offset exists, and they are intended to be settled net or realised simultaneously.

Additional income taxes that arise from the distribution of dividends are recognised at the same time as the liability to pay the related dividend arises. Information as to the calculation of income tax recognised in Statement of Income for the periods presented is included in Note 12 Income Tax.

### Tax contingencies

Significant judgement is required in determining the effective tax rate and in evaluating certain tax positions. The CSi group may accrue for tax contingencies despite the belief that positions taken in tax returns are always fully supportable. Tax contingency accruals are adjusted due to changing facts and circumstances, such as case law, progress of tax authority audits or when an event occurs that requires a change to the tax contingency accruals. Management regularly assesses the appropriateness of provisions for income taxes. Management believes that it has appropriately accrued for any contingent tax liabilities.

### o) Investment property

Investment property is initially measured at cost, and subsequent to initial recognition is measured using the cost model.

Investment property held under the cost model is subsequently measured at cost less depreciation and any provision for impairment unless held for sale. If held for sale it will be subsequently measured at the lower of carrying amount and fair value less costs to sell.

On an annual basis an independent external valuer is engaged to assist in the determination of the fair value using recognised valuation techniques. Consideration is given to the specific nature of the properties to reflect their highest and best use including any appropriate business plan.

### p) Intangible assets

Intangible assets consist primarily of internally developed software. Expenditure on internally developed software is recognised as an asset when the CSi group is able to demonstrate its intention and ability to complete the development and use the software in a manner that will generate future economic benefits, and can reliably measure the costs to complete the development. The capitalised costs of internally developed software include all costs directly attributable to developing the software. Also included within intangible assets is the customer list which was acquired as part of the PFS ('Prime Fund Solutions') acquisition and the capitalised cost is the fair value at the date of acquisition.

Intangible assets are stated at cost less accumulated depreciation and impairment losses, and are depreciated over an estimated useful life of three years using the straight-line method upon completion, or utilisation for internally developed software and over an estimated useful life of thirteen years using the straight line method for the customer list. The amortisation of the intangible assets is included in the 'General and administrative expenses' in the Consolidated Statement of Income.

The carrying amounts of the CSi group's intangible assets are reviewed at each reporting date to determine whether there is any indication of impairment. If any such indication exists, then the asset's recoverable amount is estimated. The recoverable amount of an asset is the greater of its value in use and its fair value less costs to sell. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. An impairment loss is recognised if the carrying amount of an asset exceeds its estimated recoverable amount. Impairment losses are recognised in the Consolidated Statement of Income.

### q) Property and equipment

Property and equipment are stated at historical cost less accumulated depreciation and accumulated impairment losses. Historical cost includes expenditure that is directly attributable to the acquisition of the items.

Subsequent costs are included in the asset's carrying amount or are recognised as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the CSi group and the cost of the item can be reliably measured. All other repairs and maintenance are charged to the Consolidated Statement of Income during the financial period in which they are incurred. Depreciation on assets is calculated using the straight-line method to allocate their cost to their residual values over their maximum useful lives, as follows:

| | |
|---|---|
| Long leasehold buildings | 50 years |
| Leasehold improvements | 10 years |
| Computer equipment | 2-7 years |
| Office equipment | 5 years |

The carrying amounts of property and equipment are reviewed at each reporting date to determine whether there is any indication of impairment. An impairment charge is recorded in profit and loss to the extent the recoverable amount, which is the higher of fair value less costs to sell and value in use, is less than its carrying amount. Value in use is the present value of the future cash flows expected to be derived from the asset. After the recognition of impairment, the depreciation charge is adjusted in future periods to reflect the asset's revised carrying amount. The carrying amount of an asset for which an impairment loss has been recognised in prior years shall be increased to its recoverable amount only in a change of estimate in the asset's recoverable amount.

Gains and losses on disposals are determined by comparing proceeds with the carrying amount. These are included in the Consolidated Statement of Income.

### r) Preference share capital

The CSi group classifies preference shares in accordance with the substance of the contractual arrangement. Liabilities are defined as contractual obligations to deliver cash or another financial asset to another entity, or to exchange financial assets or financial liabilities with another entity under conditions that are potentially unfavourable to the entity.

A contract that evidences a residual interest in the assets of an entity after deducting all of its liabilities is in substance part of equity. Therefore, preference share capital issued by the CSi group is classified as equity if it is non-redeemable and all dividends are discretionary, or is redeemable but only at the CSi group's option. Dividends on preference share capital classified as equity are recognised as distributions within equity.

### s) Retirement benefit costs

The CSi group has both defined contribution and defined benefit pension plans. The defined benefit plans are CS group schemes, in which the Bank is not the sponsoring entity. Obligations for contributions to defined contribution pension plans are recognised as an expense in the Consolidated Statement of Income as incurred.

In accordance with the provisions of IAS 19, "Employee Benefits" (IAS 19) for defined benefit plans that share risks between various entities under common control, no retirement benefit obligation is recognised in the Statement of Financial Positions of the Bank and defined contribution accounting is applied, as the CSi group has no contractual agreement or stated policy for incurring any charges by the sponsoring employer for the net defined benefit cost. The CSi group's share of the retirement benefit obligation is instead recognised in the Statement of Financial Position of the sponsoring entity, Credit Suisse Securities (Europe) Limited ('CSSEL'), which is external to the CSi group but is a related party due to both entities being owned by CSG.

### t) Deposits

Deposits are funds held from customers (both retail and commercial) and banks, generally for the cash safekeeping and/or liquidity needs of those customers. The amount booked to the balance sheet positions represents the nominal values of the deposits less any unearned discounts or nominal value plus any unamortised premiums. Subsequent measurement is at amortised cost.

### u) Long term debt

Debt issued by the CSi group is initially measured at fair value, which is the fair value of the consideration received, net of transaction costs incurred. Subsequent measurement is at amortised cost, using the effective interest method to amortise cost at inception to the redemption value over the life of the debt.

#### Debt with embedded derivatives

The CSi group issues structured notes containing embedded derivatives, most of which have been designated as financial liabilities at fair value through profit or loss. For more information on the criteria that must be met to designate a financial instrument at fair value please refer to the previous section of this disclosure with the same name. Both the host instrument and embedded derivative in these structured notes are remeasured at each reporting period with changes in fair value being reported in 'Net gains/ (losses) from financial assets/liabilities at fair value through profit or loss' in the Consolidated Statement of Income.

### v) Contingent liabilities

Contingent liabilities are possible obligations that arise from past events, and whose existence will be confirmed only by the occurrence or non-occurrence of one or more uncertain future events not wholly within the control of the entity, or are present obligations where it is not probable that an outflow of resources embodying economic benefits will be required to settle the obligation or the amount of the obligation, cannot be measured with sufficient reliability. A contingent liability is not recognised as a liability but is disclosed, unless the possibility is remote, except for those acquired under business combinations, which are recognised at fair value.

### w) Provisions

Provisions are recognised for present obligations as a result of past events which can be reliably measured, where it is probable that an outflow of resources embodying economic benefits will be required to settle the obligations. The amount recognised as a provision is the best estimate of the consideration required to settle the present obligation as of the statement of financial position date, taking into account the risks and uncertainties surrounding the obligation. The expense recognised when provisions are established is recorded in 'General and administrative expenses' on the Consolidated Statement of Income. Provisions for loan losses are recorded in 'Provision for credit losses' in the Consolidated Statement of Income.

### x) Share-based payments

The CSi group accounts for share based transactions with its employees as cash-settled share based payment transactions, as the CSi group has the legal obligation to settle the arrangement by delivering an asset that is not an equity instrument of the CSi group. This entails the recognition of a liability, incurred and related to share-based payments, over the service period and in proportion to the service delivered at fair value. If the employee is eligible for normal or early retirement, the award is expensed over that shorter required service period and if an award consists of individual tranches that vest in instalments (i.e. graded vesting), each tranche of the award is expensed separately over its individual service period. The fair value of the liability is remeasured until the liability is settled and the changes in fair value are recognised in the Consolidated Statement of Income.

### y) Other compensation plans

The CSi group has other deferred compensation plans which can be in the form of fixed or variable deferred cash compensation. The expense for these awards is recognised over the service period, which is the period the employee is obligated to work in order to become entitled to the cash compensation. Fixed deferred cash compensation is generally awarded in the form of sign-on bonuses and employee forgivable loans. Variable deferred cash compensations are awards where the final cash payout is determined by the performance of certain assets, a division or the CS group as a whole. The awards are expensed over the required service period and accruals are adjusted for changes to the expected final payout

### z) Interest income and expense

Interest income and expense includes interest income and expense on the CSi group's financial instruments owned and financial instruments sold not yet purchased, short-term and long-term borrowings, reverse repurchase and repurchase agreements and securities borrowed and securities lending transactions. Interest income and expense does not include interest flows on the CSi group's trading derivatives (except for hedging relationships), and certain financial instruments classified as at fair value through profit or loss. Interest income and expense is accrued, and any related net deferred premiums, discounts, origination fees or costs are amortised as an adjustment to the yield over the life of the related asset or liability.

### aa) Financial guarantee contracts

Financial guarantee contracts require the issuer to make specified payments to reimburse the holder for a loss it incurs because a specified debtor fails to make payments when due in accordance with the terms of a debt instrument. Such financial guarantee contracts are given to banks, financial institutions and other parties on behalf of customers to secure loans, overdrafts and other payables.

Financial guarantee contracts are initially recognised in the Consolidated Financial Statements at fair value on the date the guarantee was given, which is generally the fee received or receivable. Subsequent to initial recognition, the CSi group's liabilities under such guarantees are measured at the higher of the initial fair value, less cumulative amortisation, and the best estimate for the expenditure required to settle any financial obligation arising as of the Statement of Financial Position date when it is probable that the financial obligation will occur. These estimates are determined based on experience with similar transactions and history of past losses, and management's determination of the best estimate.

Any increase in the liability related to financial guarantee contracts is recorded in the Consolidated Statement of Income under 'Provision for credit losses'.

### bb) Commissions and fees

When the outcome of a transaction involving the rendering of services can be estimated reliably, revenue associated with the transaction is recognised by reference to the stage of completion of the transaction at the reporting date. The outcome of a transaction can be estimated reliably when all the following conditions are satisfied:

i) The amount of revenue can be measured reliably;

ii) It is probable that the economic benefits associated with the transaction will flow to the entity;

iii) The stage of completion of the transaction at the reporting date can be measured reliably; and

iv) The costs incurred for the transaction and the costs to complete the transaction can be measured reliably.

Fee revenue is recognised from a diverse range of services provided to its customers. Fee income is accounted for as follows:

- Income earned on the execution of a significant act is recognised as revenue when the act is completed (for example, fees arising from negotiating, or participating in the negotiation of, a transaction for a third party, such as fees from mergers and acquisitions and other corporate finance advisory services);
- Income earned from the provision of services is recognised as revenue as the services are provided (for example, portfolio management, granting of loan commitments where it is not probable that the CSi group will enter into a specific lending arrangement, customer trading and custody services ); and
- Income which forms an integral part of the effective interest rate of a financial instrument is recognised as an adjustment to the effective interest rate (for example, certain loan commitment fees where it is probable that the Group will enter into a specific lending agreement) and recorded in 'Interest income'.
- Performance-linked fees or fee components are recognised when the recognition criteria are fulfilled

Incremental costs that are directly attributable to securing investment management contracts are recognised as an asset if they can be identified separately and measured reliably and if it is probable that they will be recovered. These assets are amortised as the CSi group recognises the related revenue.

### ab) Operating leases

The leases entered into by the CSi group are exclusively operating leases. The total payments made under operating leases are charged to the Consolidated Statement of Income on a straight-line basis over the period of the lease. When an operating lease is terminated before the lease period has expired, any early termination payment required to be made to the lessor is recognised as an expense in the period in which termination takes place. For lease incentive provided by the lessor, the CSi group, as lessee, recognises the aggregate benefit as a reduction of rental expense over the lease term on a straight-line basis.

If the CSi group is the lessor in an operating lease it continues to present the asset subject to the lease in its financial statements and recognises lease income on a straight-line basis over the period of the lease.

### Subleases

The subleases entered into by the CSi group are exclusively operating leases. Sublease payments received are recognised through the Consolidated Statement of Income.

### ac) Dividends

Dividends on ordinary shares are recognised as a liability and deducted from equity when declared.

### ad) Noncontrolling interest

Noncontrolling interest is equity in subsidiaries not attributable, directly or indirectly, to the CSi group. The CSi group presents noncontrolling interest in equity. However, if the holders of noncontrolling interest have the right to put the shares to CSi or one of its subsidiaries the instrument may meet the definition of a liability and is presented as such in the consolidated financial statements of the CSi group.

## 3. Critical Accounting Estimates and Judgements in Applying Accounting Policies

In order to prepare the Consolidated Financial Statements in accordance with IFRS, management is required to make certain accounting estimates to ascertain the value of assets and liabilities. These estimates are based upon judgement and the information available at the time, and actual results may differ materially from these estimates. Management believes that the estimates and assumptions used in the preparation of the Consolidated Financial Statements are prudent, reasonable and consistently applied.

For further information on significant accounting judgements and estimates refer to Note 2 – Significant Accounting Policies, specifically the following:

i) Derivative financial instruments and hedging

j) Financial assets and liabilities at fair value through profit or loss

k) Recognition and derecognition

l) Other loans and receivables

n) Income tax

s) Compensation and benefits

v) Contingent liabilities

w) Provisions

x) Share-based payments

Management believes that the critical accounting estimates discussed below involve the most significant judgements and assessments. Use of available information and application of judgement are inherent in the formation of estimates. Actual results in the future could differ from such estimates and the differences may be material to the Consolidated Financial Statements.

### Fair Value

A significant portion of the CSi group's financial instruments (trading financial assets and liabilities, derivative instruments and financial assets and liabilities designated at fair value) are recorded at fair value in the Consolidated Statement of Financial Position. Related changes in the fair value are recognised in the Consolidated Statement of Income. Deterioration of financial markets could significantly impact the fair value of these financial instruments and the results of operations.

The fair value of the majority of the CSi group's financial instruments is based on quoted prices in active markets (Level 1) or valuation techniques using observable inputs (Level 2). These instruments include government and agency securities, certain commercial papers (CP), most investment grade corporate debt, certain high grade debt securities, exchange-traded and certain OTC derivative instruments and most listed equity securities.

In addition, the CSi group holds financial instruments for which no prices are available and which have little or no observable inputs (Level 3). For these instruments, the determination of fair value requires subjective assessment and judgement depending on liquidity, pricing assumptions, the current economic and competitive environment and the risks affecting the specific instrument. In such circumstances, valuation is determined based on management's own judgements about the assumptions that market participants would use in pricing the asset or liability, including assumptions about risk. These instruments include certain OTC derivatives, including equity and credit derivatives, certain corporate equity-linked securities, mortgage-related and collateralised debt obligation (CDO), securities, private equity investments, certain loans and credit products, including leveraged finance, certain syndicated loans and certain high yield bonds, and life finance instruments.

The fair value of financial assets and liabilities is impacted by factors such as benchmark interest rates, prices of financial instruments issued by third parties, commodity prices, foreign exchange rates and index prices or rates. In addition, valuation adjustments are an integral part of the valuation process when market prices are not indicative of the credit quality of a counterparty, and are applied to both OTC derivatives and debt instruments.

The impact of changes in a counterparty's credit spreads (known as credit valuation adjustments or CVA) is considered when measuring the fair value of assets and the impact of changes in the CSi group's own credit spreads (known as debit valuation adjustments or DVA) is considered when measuring the fair value of its liabilities.

For OTC derivatives, the impact of changes in both the CSi group's and the counterparty's credit standing is considered when measuring their fair value, based on current CDS prices. The adjustments also take into account contractual factors designed to reduce the CSi group's credit exposure to a counterparty, such as collateral held and master netting agreements.

For hybrid debt instruments with embedded derivative features, the impact of changes in the CSi group's credit standing is considered when measuring their fair value, based on current funded debt spreads.

As of the end of 2012, 83.3% and 83.2% of CSi group's total assets and total liabilities respectively, were measured at fair value (2011: 83.3% and 83.1%, respectively). Level 3 assets were USD 12.6 billion as of the end of 2012 (2011: USD 20.5 billion). As of the end of 2012, these assets comprised 1.82% of total assets (2011: 2.9%) and 2.18% of total assets measured at fair value (2011: 3.5%).

For further information on the fair value hierarchy and a description of CSi group's valuation techniques, refer to Note 36 – Financial Instruments.

During 2012, the CSi group changed the estimate for the valuation of certain Fixed Income and equity related collateralised derivative instruments. In determining the fair value of these derivatives, the OIS yield curve is now used to discount future expected cash flows as opposed to the LIBOR, which was used in prior periods. This change in estimate resulted in a loss of USD 109 million.

The CSi group does not recognise a dealer profit or unrealised gain or loss at the inception of a derivative or non-derivative transaction unless the valuation underlying the unrealised gain or loss is evidenced by quoted market prices in an active market, observable prices of other current market transactions, or other observable data supporting a valuation technique in accordance with IAS 39 AG 76.

Control processes are applied to ensure that the fair value of the financial instruments reported in the Bank and CSi group Financial Statements, including those derived from pricing models, are appropriate and determined on a reasonable basis. These control processes include the review and approval of new instruments, review of profit and loss at regular intervals, risk monitoring and review, price verification procedures and reviews of models used to estimate the fair value of financial instruments by senior management and personnel with relevant expertise who are independent of the trading and investment functions.

### Special Purpose Entities

As part of normal business, CSi group engages in various transactions that include entities which are considered Special Purpose Entities ('SPEs'). A SPE is an entity which is created to accomplish a narrow and well defined objective, often created with legal arrangements that impose strict and sometimes permanent limits on the decision making powers of their governing board, trustee or management. Such entities are required to be assessed for consolidation under IAS 27 "Consolidated and separate financial instruments" (IAS 27) and its interpretation, SIC-12 "Consolidation-Special Purpose Entities".

Transactions with SPEs are generally executed to facilitate securitisation activities or to meet specific client needs, such as providing liquidity or investment opportunities, and, as part of these activities, the CSi group may hold interests in the SPEs. Securitisation-related transactions with SPEs involve selling or purchasing assets and entering into related derivatives with those SPEs, providing liquidity, credit or other support. Other transactions with SPEs include derivative transactions in the CSi group's capacity as the prime broker for entities qualifying as SPEs. The CSi group also enters into lending arrangements with SPEs for the purpose of financing client projects or the acquisition of assets. Further, the CSi group is involved with SPEs which were formed for the purpose of offering alternative investment solutions to clients. Such SPEs relate primarily to fund-linked vehicles or fund of funds, where the CSi group acts as structurer, manager, distributor, broker, market maker or liquidity provider.

A SPE is consolidated by the CSi group when the substance of the relationship between the CSi group and the SPE indicates that the SPE is controlled by the CSi group. In assessing control, all relevant factors are considered, including qualitative and quantitative factors for example:

Qualitative factors:

(a) In substance, the activities of the SPE are being conducted on behalf of the CSi group according to its specific business needs so that the CSi group obtains benefits from the SPEs operation;

(b) In substance, the CSi group has the decision-making powers to obtain the majority of the benefits of the activities of the SPE or, by setting up an 'autopilot' mechanism, the CSi group has delegated these decision-making powers;

Quantitative factors:

(c) In substance, the CSi group has rights to obtain the majority of the benefits of the SPE and therefore may be exposed to risks incident to the activities of the SPE; or

(d) In substance, the CSi group retains the majority of the residual or ownership risks related to the SPE or its assets in order to obtain benefits from its activities.

Quantitative factors are also known as the majority of the risks and rewards of ownership.

In the majority of cases, these SPEs are accounted for off-balance sheet under IFRS where the CSi group does not have the majority of the risks and rewards of ownership of the SPE.

SPEs may be sponsored by the CSi group, unrelated third parties or clients. Significant management judgement may be required both initially to apply the consolidation accounting requirements and thereafter, if certain events occur that require the CSi group to reassess whether consolidation is required.

### Contingencies and loss provisions

According to IAS 37, a provision shall be recognised when (a) an entity has a present obligation (legal or constructive) as a result of a past event; (b) it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation; and (c) a reliable estimate can be made of the amount of the obligation.

A contingency is an existing condition that involves a degree of uncertainty that will ultimately be resolved upon the occurrence of future events

### Litigation contingencies

The CSi group is involved in a variety of legal, regulatory and arbitration matters in connection with the conduct of its businesses.

It is inherently difficult to predict the outcome of many of these matters, particularly those cases in which the matters are brought on behalf of various classes of claimants, seek damages of unspecified or indeterminate amounts or involve questionable legal claims. In presenting the Consolidated Financial Statements, management makes estimates regarding the outcome of legal, regulatory and arbitration matters and takes a charge to income when losses with respect to such matters are probable and can be reasonably estimated. Charges, other than those taken periodically for costs of defence, are not established for matters when losses cannot be reasonably estimated. Estimates, by their nature, are based on judgement and currently available information and involve a variety of factors, including but not limited to the type and nature of the litigation, claim or proceeding, the progress of the matter, the advice of legal counsel and other advisers, the CSi group's defences and its experience in similar cases or proceedings, as well as the CSi group's assessment of matters, including settlements, involving other defendants in similar or related cases or proceedings.

### Allowances and impairment losses on other loans and receivables

As a normal part of its business, the CSi group is exposed to credit risks through its lending relationships, commitments and letters of credit and as a result of counterparty risk on derivatives, foreign exchange and other transactions. Credit risk is the risk that a borrower or counterparty is unable to meet its financial obligations. In the event of a default, the CSi group generally incurs a loss equal to the amount owed by the counterparty, less a recovery amount resulting from foreclosure, liquidation of collateral or restructuring of the counterparty's obligation. The CSi group maintains allowances for loan losses which are considered adequate to absorb credit losses existing at the reporting date. These allowances are for incurred credit losses inherent in existing exposures and credit exposures specifically identified as impaired. The inherent loss allowance is for all credit exposures not specifically identified as impaired which, on a portfolio basis, are considered to contain incurred inherent losses. Loans are segregated by risk, industry or country rating in order to collectively estimate inherent losses. The loan valuation allowance for inherent loss is established by analysing historical and current default probabilities, historical recovery assumptions and internal risk ratings. The methodology for calculating specific allowances involves judgements at many levels, such as early identification of deteriorating credits. Extensive judgement is required in order to properly evaluate the various indicators of financial condition of a counterparty and likelihood of repayment.

The CSi group performs an in-depth review and analysis of impaired loans, considering factors such as recovery and exit options as well as considering collateral and counterparty risk. In general, all impaired loans are individually assessed. Corporate & institutional loans are reviewed at least annually based on the borrower's financial statements and any indications of difficulties they may experience. Loans that are not impaired, but which are of special concern due to changes in covenants, downgrades, negative financial news and other adverse developments, are included on a watch list. All loans on the watch list are reviewed at least quarterly to determine whether they should be moved to CSi group recovery management at which point they are reviewed quarterly for impairment. If an individual loan specifically identified for evaluation is considered impaired, the allowance is determined as a reasonable estimate of credit losses existing as of the end of the reporting period. Thereafter, the allowance is revalued by CSi group credit risk management at least annually or more frequently depending on the risk profile of the borrower or credit relevant events.

### Retirement Benefit Costs

The CSi group has both defined contribution and defined benefit pension plans. The defined benefit plans are CS group schemes, CSi being a participant to the scheme and Credit Suisse Securities Europe Limited ('CSSEL'), a related party also owned by the CSG, as the sponsor. The CSi group's Share of the Retirement benefit obligation, main estimates and judgements lie with CSSEL which are described below:

The following relates to the assumptions CSSEL, the sponsor of the defined benefit plan, has made in arriving at the valuations of the various components of the defined benefit plan, of which the CSi group is a participant.

The calculation of the expense and liability associated with the defined benefit pension plans requires the extensive use of assumptions, which include the discount rate, expected return on plan assets and rate of future compensation increases as determined by CSSEL. Management determines these assumptions based upon currently available market and industry data and the historical performance of the plans and their assets. Management also consults with an independent actuarial firm to assist in selecting appropriate assumptions and valuing its related liabilities. The actuarial assumptions used by CSSEL may differ materially from actual results due to changing market and economic conditions, higher or lower withdrawal rates or longer or shorter life spans of the participants. Any such differences could have a significant impact on the amount of pension expense recorded in future years.

CSSEL is required to estimate the expected return on plan assets, which is then used to compute the pension cost recorded in the Consolidated Statement of Income. Estimating future returns on plan assets is particularly subjective since the estimate requires an assessment of possible future market returns based on the plan asset mix and observed historical returns. These estimates are determined together with the plan investment and actuarial advisors.

The discount rate used in determining the benefit obligation is based upon either high quality corporate bond rates or government bonds. In estimating the discount rate, CSSEL takes into consideration the relationship between the corporate bonds and the timing and amount of the future cash outflows on its benefit payments.

## Taxes

### Tax contingencies

Significant judgement is required in determining certain tax positions. The CSi group may accrue for tax contingencies despite the belief that positions taken in tax returns are always fully supportable. Tax contingency accruals are adjusted due to changing facts and circumstances, such as case law, progress of tax authority audits or when an event occurs that requires a change to the tax contingency accruals. Management regularly assesses the appropriateness of provisions for income taxes. Management believes that it has appropriately accrued for any contingent tax liabilities.

### Deferred tax valuation

Deferred tax assets (DTA) and liabilities are recognised for the estimated future tax effects of operating loss carry-forwards and temporary differences between the carrying amounts of existing assets and liabilities and their respective tax bases at the statement of financial position date. The realisation of DTA on temporary differences is dependent upon the generation of taxable income in future accounting periods after those temporary differences become deductible. The realisation of DTA on net operating losses is dependent upon the generation of future taxable income. Management regularly evaluates whether deferred tax assets can be realised. Only if management considers it probable that a deferred tax asset will be realised is a corresponding DTA established without impairment.

In evaluating whether DTA can be realised, management considers both positive and negative evidence, including projected future taxable income, the scheduled reversal of deferred tax liabilities and tax planning strategies. This evaluation requires significant management judgement, primarily with respect to projected taxable income, also taking into account the history of recent losses of the Bank (primarily arising from the financial crisis that started in late 2008). The future taxable income can never be predicted with certainty, but management also evaluated the factors contributing to the losses and considered whether or not they are temporary or indicate an expected permanent decline in earnings. The evaluation is derived from budgets and strategic business plans but is dependent on numerous factors, some of which are beyond management's control, such as the fiscal and regulatory environment and external economic growth conditions. Substantial variance of actual results from estimated future taxable profits, or changes in CSi group's estimate of future taxable profits and potential restructurings, could lead to changes in the amount of DTA that are realisable, or considered realisable, and would require a corresponding adjustment to the level of recognised DTA.

### Share-based payments

The CSi group uses the liability method to account for its share-based compensation plans, which requires the CSi group's obligation under these plans to be recorded at its current estimated fair value. Share awards and share unit awards that contain market conditions are marked-to-market based on the latest share price information reflecting the terms of the award. Share unit awards that contain earnings performance conditions are marked-to-market based on CSG's actual earnings performance to date and CSG's internal earnings projections over the remaining vesting period of the award. In determining the final liability, CSG also estimates the number of forfeitures over the life of the plan based on management's expectations for future periods, which also considers past experience.

### Transfer Pricing

Tax transfer pricing charges are determined based on arm's length pricing principles. These net charges are adjusted as required due to evolving facts and changes in tax laws, progress of tax authority audits as well as tax authority negotiated arrangements for current and prior periods. Management continuously assess these factors and make adjustments as required.

## 4. Segmental Analysis

The Bank has concluded that there are three reportable segments that are regularly reviewed by the Chief Operating Decision Maker ('CODM') when assessing the performance and allocation of resources. These segments are based on products and services offered by CSi group:

| | |
|---|---|
| Fixed Income: | The fixed income division (FID) operates in rates, foreign exchange, credit, structured products trading, emerging markets, and commodities markets. The operations also include ongoing management and wind-down of legacy businesses in CDOs, RMBS origination, CMBS and Commodities. The product suite covers both cash and OTC derivatives including government bonds, corporate bonds, treasury bills, interest rate swaps, credit-default swaps, foreign exchange options, total return swaps, and listed options across product classes. |
| Equities: | The activities of the equities division include sales, trading, financing, prime brokerage services and market-making in global equity and equity-related securities, options, futures, risk management and hedging products. Activities cover both exchange-traded and over-the counter traded securities, including American Depositary Receipts, restricted stocks, equity repurchases, block trade executions, program trading executions, equity derivatives and convertible securities. |
| Investment banking: | The investment banking division (IBD) service offering includes mergers and acquisitions, debt, equity and other capital raising activities. |

Segment performance is assessed by the Board based on the Monthly Board Summary report, which details revenues by segment. CSi assets and liabilities are not managed by segment. Expenses are managed as part of the wider CS group management processes and therefore, while the CODM does assess the overall expense base for CSi, it does not manage the expenses at a CSi segment level.

Similarly certain revenue items are not directly allocated to the above business segments at a CSi Bank level. These items include transfer pricing, certain credit risk allocations, treasury and corporate centre allocations. These are not included as an operating segment as they are not separate business activities from which CSi may earn revenues.

Transactions between reportable segments are held at an arm's length basis and are included in the segment result.

The following table shows the external revenue of each operating segment during the year:

| | **2012** | **2011** |
|---|---:|---:|
| **Revenues (USD million)** | | |
| Fixed income | 1,829 | 1,767 |
| Equities | 789 | 744 |
| Investment banking | 226 | 227 |
| **Total revenues** | **2,844** | **2,738** |

The following table shows the CSi group's revenue by the region which generates the revenue:

| | 2012 | 2011 |
|---|---|---|
| **Revenues (USD million)** | | |
| EMEA[1] | 2,035 | 1,667 |
| America | 673 | 611 |
| Switzerland | (14) | 1 |
| Asia | 150 | 459 |
| **Total revenues** | **2,844** | **2,738** |

[1] EMEA is defined as Europe, Middle East and Africa excluding Switzerland and Luxembourg.

### CSi Group Assets:

Non-current assets, other than financial instruments, deferred tax assets, post-employment benefit assets and rights arising under insurance contracts, consist of property and equipment, investment property and intangible assets totaling USD 1,248 million (2011: USD 1,265 million), all of which are located in EMEA.

### Reconciliation of reportable segment revenues

| | 2012 | 2011 |
|---|---|---|
| **IFRS statement of income (USD million)** | | |
| Total revenues for reportable segments – MIS | 2,844 | 2,738 |
| Revenue sharing agreements | (734) | (459) |
| Treasury funding | (662) | (540) |
| Other corporate items[1] | (280) | 43 |
| CS group to primary reporting reconciliations[2] | 134 | 4 |
| **Net Revenues** | **1,302** | **1,786** |

1 Significant item being fair value changes in issued structured notes due to changes in the CSi group's own creditworthiness.

2 This is the difference between the monthly board summaries which are prepared on a US GAAP basis and the CSi accounts prepared in accordance with IFRS.

The CSi group is not reliant on any single customer for its revenue generation.

## 5. Net Interest Expense

| Group | 2012 | 2011 |
|---|---|---|
| **Net interest expense (USD million)** | | |
| Other loans and receivables | 572 | 677 |
| Securities purchased under resale agreements and securities borrowing transactions | 162 | 150 |
| Cash collateral paid on OTC derivatives transactions | 142 | 283 |
| Interest income on cash, cash equivalents and loans | 201 | 175 |
| **Interest income** | **1,077** | **1,285** |
| Deposits | (4) | (4) |
| Short term borrowings | (426) | (314) |
| Securities sold under repurchase agreements and securities lending transactions | (88) | (56) |
| Long term debt | (585) | (685) |
| Cash collateral received on OTC derivatives transactions | (145) | (308) |
| **Interest expense** | **(1,248)** | **(1,367)** |
| **Net interest expense** | **(171)** | **(82)** |

Interest income accrued on impaired financial assets during the year was USD 5 million (2011: USD 8 million).

## 6. Commissions and Fees Income/(Expense)

| Group | 2012 | 2011 |
|---|---|---|
| **Commission and fees income/(expense) (USD million)** | | |
| Lending business | 173 | 184 |
| Other customer services | (171) | (222) |
| **Net commission and fee income/(expense)** | **2** | **(38)** |
| | | |
| Total commission and fee income | 173 | 184 |
| Total commission and fee expense | (171) | (222) |
| **Net commission and fee income/(expense)** | **2** | **(38)** |

## 7. Release of provision/(Provision) for Credit Losses

| Group | 2012 | 2011 |
|---|---|---|
| **Release of provision/(Provision) for credit losses (USD million)** | | |
| Allowance for loan losses | 39 | (23) |
| Provisions for off-balance sheet exposure | 5 | - |
| **Release of provision/(Provision) for credit losses** | **44** | **(23)** |

## 8. Net Gains From Financial Assets/Liabilities At Fair Value Through Profit or Loss

| Group | 2012 | 2011 |
|---|---|---|
| **Net gains from financial assets/liabilities at fair value through profit or loss (USD million)** | | |
| Interest rate | 4,797 | 8,901 |
| Foreign exchange | (795) | (6,725) |
| Equity | (333) | (659) |
| Commodity | 43 | 327 |
| Credit | (1,608) | 428 |
| Other | 68 | 127 |
| **Total net gains from financial assets/liabilities at fair value through profit or loss** | **2,172** | **2,399** |

Of which:

| Net losses from financial assets/liabilities designated at fair value through profit or loss (USD) million) | 2012 | 2011 |
|---|---|---|
| Securities purchased under resale agreements and securities borrowing transactions | 12 | (24) |
| Loans | (489) | (1,887) |
| Other financial assets designated at fair value through profit or loss | (56) | (76) |
| Securities sold under repurchase agreements and securities lending transactions | 64 | 203 |
| Short term borrowings | (644) | 56 |
| Long term debt | (2,941) | (1,726) |
| Other financial liabilities designated at fair value through profit or loss | 122 | 38 |
| **Total net losses from financial assets/liabilities designated at fair value through profit or loss** | **(3,932)** | **(3,416)** |

Included in this total is USD 259 million loss (2011: USD 184 million gain) of fair value changes of financial liabilities due to changes in the CSi group's own creditworthiness (Structured Notes and Subordinated Debt, included in Long term debt and Short term borrowings above). The cumulative effect thereon is a gain of USD 141 million (2011: gain USD 400 million).

## 9. Other Revenues

| Group | 2012 | 2011 |
|---|---|---|
| **Other revenues (USD million)** | | |
| Revenue sharing agreement expense | (734) | (459) |
| Income from equity method investments | - | 9 |
| Other | (11) | (24) |
| **Other revenues** | **(745)** | **(474)** |

The revenue sharing agreement expense principally relates to amounts allocated to CSi from other companies in the CS group under transfer pricing policies.

## 10. Compensation and Benefits

| Group | 2012 | 2011 |
|---|---|---|
| **Compensation and benefits (USD million)** | | |
| Salaries and variable compensation | (368) | (402) |
| Social security | (43) | (41) |
| Pensions | (22) | (17) |
| Other | (4) | (5) |
| **Compensation and benefits** | **(437)** | **(465)** |

Included in the above table are amounts relating to Directors' remuneration. Further details are disclosed in Note 31 – Related Parties. Staff costs and staff numbers do not differ between Bank and CSi group.

## 11. General and Administrative Expenses

| Group | | 2012 | 2011 |
|---|---|---|---|
| **General and administrative expenses (USD million)** | | | |
| Occupancy expenses | | (3) | (17) |
| Amortisation expenses | 22 | (149) | (117) |
| Depreciation expenses | 23 | (69) | (76) |
| Depreciation for real estate | 18 | (7) | - |
| Impairment of Investment property | | (14) | - |
| Provisions | 26 | (1) | (18) |
| Brokerage charges and clearing house fees | | (298) | (446) |
| Auditor's Remuneration | | (3) | (3) |
| Professional services | | (24) | (29) |
| Impairment of intangible assets | 22 | - | (3) |
| CSG Trademark | | (21) | (29) |
| Net overheads allocated from other CS group entities | | (532) | (667) |
| UK Bank Levy | | (38) | (44) |
| Marketing data , Publicity and Subscription | | (21) | (21) |
| Non Income taxes | | (15) | (13) |
| Other | | (29) | (31) |
| **General and administrative expenses** | | **(1,224)** | **(1,514)** |

### Auditor's remuneration

Auditor's remuneration in relation to the statutory audit amounted to USD 2.9 million (2011: USD 2.8 million). The following fees were payable by the CSi group to the auditor, KPMG Audit Plc.

| | 2012 USD'000 | 2011 USD'000 |
|---|---|---|
| **Csi Auditor's remuneration** | | |
| Fees payable to the Bank's auditor for the audit of the Bank's annual accounts | 1,894 | 1,882 |
| Fees payable to the CSi group's auditor and its associates for other services: | | |
| Audit-related assurance services | 127 | 96 |
| Other assurance services | 970 | 818 |
| **Total** | **2,991** | **2,796** |

## 12. Income Tax

| | Group | | Bank | |
|---|---|---|---|---|
| | **2012** | **2011** | **2012** | **2011** |
| **Current and deferred taxes (USD million)** | | | | |
| **Current tax** | | | | |
| Current expense on profits | (3) | (4) | (3) | (4) |
| Adjustments in respect of previous periods | 13 | 11 | 13 | 11 |
| Adjustments in respect of APA | 10 | - | 10 | - |
| **Current income tax benefit** | **20** | **7** | **20** | **7** |
| **Deferred tax** | | | | |
| Origination and reversal of temporary differences | 101 | 113 | 101 | 113 |
| Current year tax losses | (18) | (73) | (18) | (73) |
| Adjustments in respect of APA | (335) | - | (335) | - |
| Adjustments in respect of previous periods | (2) | (2) | (2) | (2) |
| Effect of changes in tax rate or the imposition of new taxes | (139) | (130) | (139) | (130) |
| **Deferred income tax expense** | **(393)** | **(92)** | **(393)** | **(92)** |
| **Income tax expense** | **(373)** | **(85)** | **(373)** | **(85)** |

The UK corporation rate reduced from 26% to 24% with effect from 1 April 2012. Furthermore, the UK corporation tax rate will reduce from 24% to 23% with effect from 1 April 2013.

Further information about deferred income tax is presented in Note 13 – Deferred Taxes. The income tax expense for the year can be reconciled to the loss per the statement of income as follows:

### Reconciliation of taxes computed at the UK statutory rate

| | Group | | Bank | |
|---|---|---|---|---|
| | **2012** | **2011** | **2012** | **2011** |
| **Reconciliation of taxes computed at the UK statutory rate (USD million)** | | | | |
| Loss before tax | (359) | (193) | (319) | (187) |
| Income tax expense computed at the statutory rate of 24.5% (2011: 26.5%) | 88 | 51 | 79 | 49 |
| Increase/(decrease) in income taxes resulting from: | | | | |
| Other permanent differences | (5) | (11) | 4 | (9) |
| Effect of different tax rates of operations/subsidiaries operating in other jurisdictions | (3) | (1) | (3) | (1) |
| Adjustments to current tax in respect of previous periods | 13 | 11 | 13 | 11 |
| Impact of finalisation of APA | (325) | - | (325) | |
| Adjustments to deferred tax in respect of previous periods | (2) | (2) | (2) | (2) |
| Effect on deferred tax resulting from changes to tax rates | (139) | (133) | (139) | (133) |
| **Income tax expense** | **(373)** | **(85)** | **(373)** | **(85)** |

## 13. Deferred Taxes

Deferred taxes are calculated on all temporary differences under the liability method using an effective tax rate of 23% (2011: 25%).

On 21 March 2012, the UK Government announced that the corporation tax rate applicable from 1 April 2012 would be 24%. This change was substantively enacted on 26 March 2012.

In addition, the Finance Act 2012, which passed into law on 17 July 2012, included a further reduction in the UK corporation tax rate from 24% to 23% with effect from 1 April 2013. The change in the UK corporation tax rate from 25% to 23% has resulted in a reduction of the CSi group's net deferred tax asset as at 31 December 2012 of USD 139 million.

It is further proposed that the UK corporation tax rate applicable from 1 April 2014 will be 21%. This reduction is expected to be substantively enacted in July 2013. The effect of this reduction upon the CSi group's deferred tax balance cannot be reliably quantified at this stage.

In the UK budget announcement of 20 March 2013, the UK government announced its intention to further reduce the UK corporation tax rate to 20% with effect from 1 April 2015. This tax rate reduction is expected to be substantively enacted in 2014. The effect of this tax rate reduction upon CSi group's deferred tax balance cannot be reliably quantified at this stage.

In the first half of 2012, the UK and US tax authorities advised CS that they reached agreement on the CS Advanced Pricing Agreement ('APA') application for the period 2004-2011. The APA sets out the transfer pricing methodology which determines the allocation of profits and losses to be taxed in each jurisdiction. As a result of this agreement, CSi has reduced losses carried forward as at 31 December 2012 of USD 834 million and has recognised an income tax expense of USD 325 million and an overall reduction in CSi's net deferred tax asset of USD 335 million.

| | Group | | Bank | |
|---|---|---|---|---|
| | **2012** | **2011** | **2012** | **2011** |
| **Deferred tax (USD million)** | | | | |
| Deferred tax assets | 1,450 | 1,843 | 1,450 | 1,843 |
| **Net position** | **1,450** | **1,843** | **1,450** | **1,843** |
| | | | | |
| Balance at 1 January | 1,843 | 1,935 | 1,843 | 1,935 |
| Transfers | - | 1 | - | 1 |
| (Expense)/credit to income for the year | (254) | 40 | (254) | 40 |
| Effect of change in tax rate expensed to income statement | (139) | (133) | (139) | (133) |
| **At end of the year** | **1,450** | **1,843** | **1,450** | **1,843** |

### Deferred tax assets

Deferred tax assets and liabilities are attributable to the following items:

| | Group | | Bank | |
|---|---|---|---|---|
| | **2012** | **2011** | **2012** | **2011** |
| **Components of net deferred tax assets (USD million)** | | | | |
| Derivative financial instruments | 12 | 18 | 12 | 18 |
| Share-based compensation | 24 | 25 | 24 | 25 |
| Decelerated tax depreciation | 139 | 145 | 139 | 145 |
| Other provisions | 80 | 92 | 80 | 92 |
| Unpaid interest | 345 | 315 | 345 | 315 |
| Deferred tax impact on losses carried forward | 850 | 1,248 | 850 | 1,248 |
| **At end of the year** | **1,450** | **1,843** | **1,450** | **1,843** |

### Details of the tax effect of temporary differences

The deferred tax expense in the Statement of Income comprises the following temporary differences:

| | Group | | Bank | |
|---|---|---|---|---|
| | **2012** | **2011** | **2012** | **2011** |
| **Tax effect of temporary differences (USD million)** | | | | |
| Derivative financial instruments | (6) | (6) | (6) | (6) |
| Share-based compensation | (1) | (79) | (1) | (79) |
| Decelerated tax depreciation | (6) | 9 | (6) | 9 |
| Other provisions | (13) | 78 | (13) | 78 |
| Unpaid interest | 30 | 70 | 30 | 70 |
| Deferred tax impact on losses carried forward | (397) | (164) | (397) | (164) |
| **Total deferred tax (expense)/benefit in the statement of income** | **(393)** | **(92)** | **(393)** | **(92)** |

Deferred tax assets ('DTA') and liabilities are recognised for the estimated future tax effects of operating loss carry-forwards and temporary differences between the carrying amounts of existing assets and liabilities and their respective tax bases at the Statement of Financial Position date. The realisation of DTA on temporary differences is dependent upon the generation of taxable income in future accounting periods after those temporary differences become deductible. The realisation of DTA on net operating losses is dependent upon the generation of future taxable income. Management regularly evaluates whether DTA can be realised. Only if management considers it probable that a DTA will be realised is a corresponding deferred tax asset established without impairment.

In evaluating whether DTA can be realised, management considers both positive and negative evidence, including projected future taxable income, the scheduled reversal of deferred tax liabilities and tax planning strategies. This evaluation requires significant management judgement, primarily with respect to projected taxable income, also taking into account the history of recent losses of the bank (primarily arising from the financial crisis that started in late 2008). The future taxable income can never be predicted with certainty, but management also evaluated the factors contributing to the losses and considered whether or not they are temporary or indicate an expected permanent decline in earnings. The evaluation is derived from budgets and strategic business plans but is dependent on numerous factors, some of which are beyond management's control, such as the fiscal and regulatory environment and external economic growth conditions. Substantial variance of actual results from estimated future taxable profits, or changes in CSi group's estimate of future taxable profits and potential restructurings, could lead to changes in the amount of DTA that are realisable, or considered realisable, and would require a corresponding adjustment to the level of recognised DTA.

As a consequence of this evaluation, it was considered that the DTA could be recognised in full. The Bank's assessment is that trading losses carried forward should be utilised within a period of up to 5 years. This assessment includes the adjustment for APA losses of USD 834 million which occurred in 2012 (referred to above). If strategies and business plans will significantly deviate in the future from current management assumptions, the current level of deferred tax assets may need to be adjusted, if full recovery of the DTA balance is no longer probable.

## 14. Securities Borrowed, Lent and Subject to Resale or Repurchase Agreements

The following table summarises the securities purchased under agreements to resell and securities borrowing transactions, at their respective carrying values:

| **Group and Bank** | **2012** | **2011** |
|---|---|---|
| **Securities borrowed or purchased under agreement to resell (USD million)** | | |
| Securities purchased under resale agreements | 19,966 | 24,637 |
| Deposits paid for securities borrowed | 4,137 | 4,769 |
| **Total securities borrowed or purchased under agreement to resell** | **24,103** | **29,406** |

The following table summarise the securities lent under agreements to repurchase and securities lending transactions, at their respective carrying values:

| Group and Bank | 2012 | 2011 |
|---|---|---|
| **Securities lent or sold under agreement to repurchase (USD million)** | | |
| Securities sold under repurchase agreements | 2,220 | 753 |
| Deposits received for securities lent | 2,654 | 6,218 |
| **Total securities lent or sold under agreement to repurchase** | **4,874** | **6,971** |

Securities borrowed, lent and subject to resale and repurchase agreements are mainly due within one year.

Repurchase and reverse repurchase agreements represent collateralised financing transactions used to earn net interest income, increase liquidity or facilitate trading activity. These instruments are collateralised principally by government securities and money market instruments and generally have terms ranging from overnight to a longer or unspecified period of maturity. The CSi group monitors the fair value of securities received or delivered. For securities purchased under repurchase agreements, the CSi group requests additional securities, or the return of a portion of the cash disbursed when appropriate, in response to a decline in the market value of the securities received. Similarly, the return of excess securities or additional cash is requested, when appropriate, in response to an increase in the market value of securities sold under repurchase agreements.

Deposits paid for securities borrowed and deposits received for securities lent are recorded at the amount of cash paid or received. These transactions are typically collateralised by cash or marketable securities. For securities lending transactions, the CSi group receives cash or securities as collateral in an amount generally in excess of the market value of securities lent. The CSi group monitors the market value of securities borrowed and securities on a daily basis and additional collateral is obtained as necessary.

Retained assets relate to securities lending agreements and repurchase agreements. The resulting credit exposures are controlled by daily monitoring and collateralisation of the positions.

## 15. Trading Financial Assets and Liabilities at Fair Value Through Profit or Loss

| | Group | | Bank | |
|---|---|---|---|---|
| **Trading financial assets at fair value through profit or loss (USD million)** | **2012** | **2011** | **2012** | **2011** |
| Debt securities | 34,896 | 28,751 | 34,796 | 28,744 |
| Equity securities | 14,557 | 14,647 | 13,716 | 13,592 |
| Derivative instrument | 506,232 | 529,346 | 506,587 | 530,064 |
| Other | 1,648 | 1,990 | 2,203 | 2,553 |
| **Trading financial assets at fair value through profit or loss** | **557,333** | **574,734** | **557,302** | **574,953** |

| | Group | | Bank | |
|---|---|---|---|---|
| **Trading financial liabilities at fair value through profit or loss (USD million)** | **2012** | **2011** | **2012** | **2011** |
| Short positions | 11,472 | 10,490 | 11,472 | 10,489 |
| Derivative instruments | 514,265 | 540,734 | 514,411 | 541,427 |
| **Trading financial liabilities at fair value through profit or loss** | **525,737** | **551,224** | **525,883** | **551,916** |

Debt instruments primarily consist of corporate bonds and government securities.
Trading financial assets include USD 32.6 billion (2011: USD 34.0 billion) which are encumbered. The transactions in relation to the encumbered assets are conducted under terms that are usual and customary for securities lent, repurchase agreements or other collateralised borrowings.

## 16. Financial Assets and Liabilities Designated at Fair Value Through Profit or Loss

| | Group | | Bank | |
|---|---|---|---|---|
| **Financial assets designated at fair value through profit or loss (USD million)** | **2012** | **2011** | **2012** | **2011** |
| Debt securities | 80 | 98 | 80 | 98 |
| Loans | 10,447 | 11,550 | 10,447 | 11,550 |
| Securities purchased under resale agreements and securities borrowing transactions | 5,283 | 6,290 | 5,283 | 6,290 |
| Other | 4,318 | 763 | 4,318 | 763 |
| **Total financial assets designated at fair value through profit or loss** | **20,128** | **18,701** | **20,128** | **18,701** |

Of the financial assets designated at fair value through profit or loss, loans and reverse repurchase agreements were elected to alleviate an accounting mismatch while debt instruments were elected because they are managed on a fair value basis.

For loans designated at fair value through profit or loss, the maximum fair value exposure to credit risk as at 31 December 2012 was USD 10.5 billion (2011: USD 11.5 billion). To mitigate this credit risk, securities are held as collateral, and credit default swaps with a notional value of USD 1.5 billion (2011: USD 3.7 billion) have been transacted to transfer this risk into the capital markets.

The fair value movement attributable to counterparty credit on loans designated at fair value through profit or loss is calculated using credit spreads applicable to specific points in time. All other risk variables are held constant and the credit spreads are moved based on current market conditions. During the year ended 31 December 2012, this fair value movement was an increase of USD 655 million (2011: decrease USD 185 million). The cumulative effect thereon at the year-end was a decrease of USD 1.1 billion (2011: decrease USD 1.8 billion). The corresponding increase in fair value of the swaps and securities in place to mitigate this risk was USD 84 million (2011: increase USD 215 million). The cumulative effect thereon at the year-end was an increase of USD 2.2 billion (2011: increase USD 2.1 billion).

For reverse repurchase agreements, the Bank's credit exposure to the counterparties of these trades is mitigated by posted collateral and through subsequent margin calls. Accordingly, the Bank does not enter into hedges to mitigate credit exposure to its counterparties. Also, given that the credit exposure is almost eliminated, the fair value changes attributable to credit risk is insignificant.

The debt instruments measured at fair value through profit or loss are government securities.

| | Group | | Bank | |
|---|---|---|---|---|
| **Financial liabilities designated at fair value through profit or loss (USD million)** | **2012** | **2011** | **2012** | **2011** |
| Subordinated debt | 296 | 433 | 296 | 433 |
| Structured notes (included in Long term debt and Short term borrowing) | 18,158 | 17,986 | 18,133 | 17,961 |
| Deposits | 4,611 | 2,300 | 4,785 | 2,300 |
| Securities sold under repurchase agreements and securities lending transactions | 10,773 | 8,573 | 10,773 | 8,573 |
| Other | 2,806 | 2,060 | 1,810 | 1,031 |
| **Total financial liabilities designated at fair value through profit or loss** | **36,644** | **31,352** | **35,797** | **30,298** |

Of the other financial liabilities designated at fair value through profit or loss, subordinated debt, bonds and repurchase agreements were primarily elected to alleviate an accounting mismatch, while structured notes and deposits were mainly elected because they are managed on a fair value basis.

The fair value of a financial liability incorporates the credit risk of that financial liability. If the instrument is quoted in an active market, the movement in fair value due to credit risk is calculated as the amount of change in fair value that is not attributable to changes in market conditions that give rise to market risk. If the instrument is not quoted in an active market, the fair value is calculated using a valuation technique that incorporates credit risk by discounting the contractual cash flows on the debt using a credit-adjusted yield curve which reflects the level at which the CSi group would issue similar instruments as of the reporting date.

The fair value of subordinated debt and structured notes is calculated using a yield curve which reflects the CSi group's credit rating in the market. This is achieved by adjusting the relevant yield curve by the CSi group's credit spread, dependent on the tier of the debt, at each point in the curve to provide an own credit adjusted valuation.

The carrying amount is USD 0.5 billion higher than the principal amount that the CSi group would be contractually required to pay to the holder of these financial liabilities at maturity (2011: USD 2.7 billion lower).

## 17. Other Loans and Receivables

The following table sets forth details of the domestic (United Kingdom) and foreign portfolios:

| | Group | | Bank | |
|---|---|---|---|---|
| | **2012** | **2011** | **2012** | **2011** |
| **Loans (USD million)** | | | | |
| Real estate | 16 | 35 | 16 | 42 |
| Commercial and industrial loans | 1,069 | 1,582 | 1,073 | 1,582 |
| Financial institutions | 12,461 | 12,800 | 12,461 | 12,800 |
| Government and public institutions | - | 4 | - | 4 |
| **Gross loans** | **13,546** | **14,421** | **13,550** | **14,428** |
| ■ of which domestic | 12,053 | 12,138 | 12,053 | 12,138 |
| ■ of which foreign | 1,493 | 2,283 | 1,497 | 2,290 |
| Net unearned income | (19) | (19) | (19) | (19) |
| Allowance for loan losses | (18) | (59) | (18) | (61) |
| **Net loans** | **13,509** | **14,343** | **13,513** | **14,348** |
| **Gross impaired loans** | **37** | **72** | **37** | **72** |
| ■ of which loans with an individual allowance | 2 | 68 | 2 | 68 |
| ■ of which loans without an individual allowance | 35 | 4 | 35 | 4 |

Other loans and receivables due within one year for the CSi group and Bank, amounts to USD 557 million (2011: USD 937 million).

### Reconciliation of the allowance for loan losses by class

The following table sets forth the movements in the allowances for impairment losses on other loans and receivables:

| **Group** | **Banks** | **Customers** | **Total** |
|---|---|---|---|
| **Allowance for loan losses (USD million)** | | | |
| Balance at 1 January 2012 | (7) | (52) | (59) |
| ■ Additional allowances for impairment losses | (2) | (14) | (16) |
| ■ Reversal of allowances for impairment losses | 3 | 52 | 55 |
| Movement recognised in Consolidated Statement of Income | 1 | 38 | 39 |
| ■ Net write backs | - | 2 | 2 |
| **Balance at 31 December 2012** | **(6)** | **(12)** | **(18)** |
| | | | |
| Balance at 1 January 2011 | (6) | (63) | (69) |
| ■ Additional allowances for impairment losses | (3) | (44) | (47) |
| ■ Reversal of allowances for impairment losses | 2 | 22 | 24 |
| Movement recognised in Consolidated Statement of Income | (1) | (22) | (23) |
| ■ Net write backs | - | 33 | 33 |
| **Balance at 31 December 2011** | **(7)** | **(52)** | **(59)** |

| Bank | Banks | Customers | Total |
|---|---|---|---|
| **Allowance for loan losses (USD million)** | | | |
| Balance at 1 January 2012 | (7) | (54) | (61) |
| ▪ Additional allowances for impairment losses | (2) | (14) | (16) |
| ▪ Reversal of allowances for impairment losses | 3 | 52 | 55 |
| Movement recognised in Consolidated Statement of Income | 1 | 38 | 39 |
| ▪ Net write backs | - | 4 | 4 |
| **Balance at 31 December 2012** | **(6)** | **(12)** | **(18)** |
| Balance at 1 January 2011 | (6) | (63) | (69) |
| ▪ Additional allowances for impairment losses | (3) | (44) | (47) |
| ▪ Reversal of allowances for impairment losses | 2 | 22 | 24 |
| Movement recognised in Consolidated Statement of Income | (1) | (22) | (23) |
| ▪ Net write backs | - | 31 | 31 |
| **Balance at 31 December 2011** | **(7)** | **(54)** | **(61)** |

## 18. Investment Property

The CSi Group consolidates a number of SPEs which hold property. Investment properties are currently held at cost less depreciation and provision for impairment. Due to a fall in indicative open market value, an impairment charge of USD 14 million was taken to the Consolidated Statement of Income for the year. The fair value and carrying value amount were the same as at 31 December 2012.

| Group | 2012 | 2011 |
|---|---|---|
| **Investment property (USD million)** | | |
| Balance at the beginning of the year | 561 | |
| Reclassification from real estate held-for-sale | - | 561 |
| Depreciation charge for the year | (7) | - |
| Impairment charge for the year | (14) | - |
| Foreign Currency Translation | (22) | - |
| **Balance at the end of year** | **518** | **561** |

## 19. Other Assets and Other Liabilities

| | Group | | Bank | |
|---|---|---|---|---|
| | **2012** | **2011** | **2012** | **2011** |
| **Other assets (USD million)** | | | | |
| Brokerage receivables (refer to Note 20) | 2,057 | 2,407 | 2,053 | 2,407 |
| Interest and fees receivable | 203 | 477 | 514 | 769 |
| **Cash collateral on derivative instruments** | | | | |
| ▪ Banks | 24,580 | 24,826 | 24,580 | 24,826 |
| ▪ Customers | 26,783 | 27,814 | 26,783 | 27,814 |
| Other | 337 | 220 | 338 | 250 |
| **Other assets** | **53,960** | **55,744** | **54,268** | **56,066** |

Other assets are mainly due within one year.

| | Group | | Bank | |
|---|---|---|---|---|
| | **2012** | **2011** | **2012** | **2011** |
| **Other liabilities (USD million)** | | | | |
| Brokerage payables (refer to Note 20) | 2,570 | 780 | 2,567 | 780 |
| Interest and fees payable | 974 | 1,311 | 1,299 | 1,623 |
| **Cash collateral on derivative instruments** | | | | |
| ■ Banks | 28,658 | 29,083 | 28,658 | 29,083 |
| ■ Customers | 11,718 | 10,601 | 11,718 | 10,601 |
| Failed sales | 259 | 272 | 259 | 272 |
| Share-based compensation liability | 103 | 92 | 109 | 92 |
| Other | 684 | 696 | 670 | 686 |
| **Other liabilities** | **44,966** | **42,835** | **45,280** | **43,137** |

## 20. Brokerage Receivables and Brokerage Payables

Brokerage receivables and payables included in the table below represent amounts due to and from banks, brokers and dealers as well as customers for varying transaction types. Included within these balances are margin accounts where cash has been deposited with an exchange, bank or broker to facilitate future transactions and where the CSi group requires customers to maintain margin collateral in compliance with applicable regulatory and internal guidelines.

The CSi group also enters into fully margined exchange traded derivatives such as futures and balance payable to or receivable from the exchange the next day are recorded in the brokerage balances. In addition the CSi group performs brokerage and clearance activities for clients where exchange fees are incurred and receivable from clients.

| | Group | | Bank | |
|---|---|---|---|---|
| | **2012** | **2011** | **2012** | **2011** |
| **Brokerage receivable (USD million)** | | | | |
| Due from customers | 650 | 304 | 646 | 304 |
| Due from banks, brokers and dealers | 1,407 | 2,103 | 1,407 | 2,103 |
| **Total brokerage receivables** | **2,057** | **2,407** | **2,053** | **2,407** |
| | | | | |
| **Brokerage payable (USD million)** | | | | |
| Due to customers | 278 | 182 | 275 | 182 |
| Due to banks, brokers and dealers | 2,292 | 598 | 2,292 | 598 |
| **Total brokerage payables** | **2,570** | **780** | **2,567** | **780** |

Included within payables are liabilities identified as client money. The CSi group and Bank held USD 391 million as at 31 December 2012 (2011: USD 110 million). This cash is recorded under 'Cash and due from banks' and the corresponding liability is included in 'Other liabilities'.

## 21. Significant Subsidiaries

### Significant subsidiaries:

| Bank | 2012 | 2011 |
|---|---|---|
| Investments in subsidiary undertakings (USD million) | 10 | 10 |

The subsidiary undertakings, direct and indirect, of the Bank at 31 December 2012, all of which are consolidated in these financial statements, are as follows:

| Bank | Country of Incorporation | % Equity Held |
|---|---|---|
| **Direct holdings:** | | |
| Credit Suisse First Boston International (USA), Inc. | United States | 100% |
| CSFB International Trading, L.L.C. | United States | 100% |

During 2012 Credit Suisse First Boston International Warrants Limited and Credit Suisse First Boston International (Holding) B.V. were liquidated and dissolved.

The business of all of the subsidiaries is complementary to the business of the Bank.

## 22. Intangible Assets

| Group and Bank 2012 | Customer list[1] | Internally developed software | Total |
|---|---|---|---|
| **Intangible assets (USD million)** | | | |
| **Cost:** | | | |
| Cost as at 1 January 2012 | 5 | 872 | 877 |
| Additions | - | 209 | 209 |
| Disposals | - | (6) | (6) |
| **Cost as at 31 December 2012** | **5** | **1,075** | **1,080** |
| | | | |

Leasehold improvements relate to improvements to land and buildings occupied by the Bank and its fellow subsidiaries for their own activities.

No interest has been capitalised within property and equipment (2011: USD Nil).

## 24. Deposits

| Group and Bank<br>Deposits (USD million) | 2012 | 2011 |
|---|---|---|
| Non-interest bearing demand deposits | 111 | 1,702 |
| Interest-bearing demand deposits | 2,082 | 2,021 |
| Time deposits | 2,651 | 728 |
| **Total deposits** | **4,844** | **4,451** |
| Of which due to banks | 2,811 | 2,465 |
| Of which due to customers | 2,033 | 1,986 |

## 25. Short Term Borrowings

| | Group | | Bank | |
|---|---|---|---|---|
| | 2012 | 2011 | 2012 | 2011 |
| **Short-term borrowings (USD million)** | | | | |
| Short term borrowings: | | | | |
| from banks | 20,690 | 23,713 | 20,690 | 23,713 |
| from customers | 9,028 | 9,029 | 9,052 | 9,053 |
| **Total short term borrowings** | **29,718** | **32,742** | **29,742** | **32,766** |

## 26. Provisions

| Group and Bank | Property | Litigation | Total |
|---|---|---|---|
| **Provisions (USD million)** | | | |
| Balance at 1 January 2012 | 4 | 22 | 26 |
| Charges during the year | - | 1 | 1 |
| Utilised during the year | - | (3) | (3) |
| **Balance at 31 December 2012** | **4** | **20** | **24** |

### Property provision

The property provision mainly relates to property reinstatement obligations that will be incurred when the leases expire.

| Building | Provision | Utilisation period |
|---|---|---|
| 17 Columbus Courtyard, London | USD 1 million | 31 December 2024 |
| 5 Canada Square, London | USD 2 million | 31 December 2027 |
| Pall Mall, London | USD 1 million | 31 March 2018 |

### Litigation provision

The CSi group accrues litigation provisions (including fees and expenses of external lawyers and other service providers) in connection with certain judicial, regulatory and arbitration proceedings when reasonably possible losses, additional losses or ranges of loss are probable and reasonably estimable. General Counsel in consultation with the business reviews CS group's judicial, regulatory and arbitration proceedings each quarter to determine the adequacy of its litigation provisions and may increase or release provisions based on management's judgement and the advice of counsel. The anticipated utilisation of these litigation provisions typically ranges from six to eighteen month period, however certain litigation provisions are anticipated to extend beyond this period. Further provisions or releases of litigation provisions may be necessary in the future as developments in such litigation, claims or proceedings warrant.

The litigation provision relates to legal cases that the Bank is defending. The exact timing of outflow of economic benefits cannot be ascertained at 31 December 2012.

## 27. Long Term Debt

| | Group | | Bank | |
|---|---|---|---|---|
| | **2012** | **2011** | **2012** | **2011** |
| **Long term debt (USD million)** | | | | |
| Senior debt | 22,283 | 20,471 | 22,278 | 20,443 |
| Subordinated debt | 8,371 | 11,202 | 8,371 | 11,202 |
| **Total long term debt** | **30,654** | **31,673** | **30,649** | **31,645** |

The reduction in subordinated debt includes all the callable subordinated loans (provided by Credit Suisse PSL GmbH and Credit Suisse First Boston Finance B.V.) amounting to USD 2,964 million which have been redeemed and replaced by new participating shares, i.e. ordinary shares with no voting rights, as part of the capital restructuring in February 2012 (refer to Note – 28 Share Capital and Share Premium for further details).

## 28. Share Capital and Share Premium

| Group and Bank | 2012 | 2011 |

| Class J Preference Shares of USD1 each | - | 1,400,000,000 |
| Class K Preference Shares of USD1 each | - | 200,000,000 |
| **Total allotted, called-up and fully paid capital** | **3,107,656,005** | **9,624,568,413** |

## Share Premium

| Group and Bank | 2012 | 2011 |
|---|---|---|
| **Share premium (USD)** | | |
| Opening balance | 1,016,106,287 | 1,016,106,287 |
| Reduction in face value of Ordinary shares | 112 | - |
| Transfer of Participating shares relating to capital restructuring | 3,950,611,279 | - |
| Transfer of Preference shares relating to capital restructuring | 5,235,000,000 | - |
| Issuance of Participating shares relating to capital restructuring | (581,666,666) | - |
| Conversion of subordinated debt to Participating shares relating to capital restructuring | 2,634,488,889 | - |
| Issuance of Participating shares | 444,444,444 | - |
| **Closing balance** | **12,698,984,345** | **1,016,106,287** |

As part of a restructuring of CSi's capital structure, the following transactions occurred during the year ended 31 December 2012:

On 3 February 2012, CSi passed a special resolution to undergo a capital restructuring in accordance with the Companies Act 2006. The purpose of the capital restructuring was to be compliant with regulatory capital requirements. The salient features of the restructure which took effect from 6 February 2012 were as follows:

- 125 Ordinary Voting shares of USD 1 were reduced to USD 0.1 per share, with USD 13 remaining in Share Capital and USD 112 transferred to Share Premium.
- 43,895,680,088 Participating non-voting shares of USD 1 were reduced to USD 0.1 per share, with USD 438,956,809 remaining in Share Capital and USD 3,950,611,279 transferred to Share Premium.
- 200 Class A Participating non-voting shares of USD 1 per share were cancelled.
- All preference shares in issue (class A, C, D, E, H, I, J and K) totalling USD 5,235,000,000 were replaced by new Participating shares. Share Capital increased by USD 581,666,666 as a result and Share Premium by USD 4,653,333,334.
- Subordinated Debt totalling USD 2,963,800,000 was repaid and replaced by Participating shares, with USD 329,311,111 credited to Share Capital and USD 2,634,488,889 credited to Share Premium.
- On 29 February 2012, CSi issued 555,555,555 Participating shares of USD 0.1 each allotted and issued in cash, with USD 55,555,556 credited to Share Capital and USD 444,444,444 credited to Share Premium.
- On 16 August 2012, Subordinated Debt totalling USD 202,165,852 was repaid and replaced by 2,021,658,519 Participating shares issued at par value USD 0.1 per share to improve the quality of capital in line with requirements of Basel III.
- On 6 November 2012 CSI issued 15,000,000,000 Participating Shares at par value of USD 0.1 per share in lieu of total cash consideration of USD 1,500,000,000.

The Ordinary Shares carry voting rights but do not carry the right to receive dividends.

The Participating Shares do not carry voting rights but carry the right to receive dividends. In all other respects the Participating Shares and the Ordinary Shares rank pari passu.

## 29. Retirement Benefit Obligations

The following disclosures contain the balances for the entire defined benefit plan sponsored by Credit Suisse Securities (Europe) Limited ('CSSEL'), of which the Bank is one of many participants, who are all related parties under common control. The Bank accounts for its share of the plan using defined contribution accounting. During 2012 the Bank expensed USD 8.3 million (2011: USD 1.4 million) in respect of its contributions to the UK defined benefit scheme.

The following table shows the changes in the defined benefit obligation and the fair value of plan assets during 2012 and 2011, and the amounts included in CSSEL's consolidated financial statements for the defined benefit pension plan as at 31 December 2012 and 2011 respectively:

| Group and Bank | 2012 | 2011 |
|---|---|---|
| **Defined benefit pension plans (USD million)** | | |
| Defined benefit obligation – 1 January | 1,399 | 1,297 |
| Current service cost | 6 | 6 |
| Interest cost | 70 | 75 |
| Curtailments (1) | (7) | - |
| Actuarial losses – assumptions | 7 | 44 |
| Actuarial (gains)/ losses – experience | (2) | 6 |
| Benefit payments | (33) | (19) |
| Exchange rate losses/(gains) | 66 | (10) |
| **Defined benefit obligation – 31 December** | **1,506** | **1,399** |
| | | |
| Fair value of plan assets – 1 January | 1,858 | 1,404 |
| Expected return on plan assets | 130 | 109 |
| Actuarial gains | 19 | 380 |
| **Actual return on plan assets** | **149** | **489** |
| Employer Contributions | 93 | 10 |
| Benefit payments | (33) | (19) |
| Exchange rate losses/(losses) | 93 | (26) |
| **Fair value of plan assets – 31 December** | **2,160** | **1,858** |

(1) Curtailment impacts related to the headcount reduction in 2012 in the context of the cost efficiency program as announced by management.

The Bank has agreed the valuation and funding of the UK defined benefit pension plan with the Pension Fund Trustees as at 31 December 2011.

As per the 31 December 2011 valuation discussion with the Trustees, no additional special funding contributions are due to be paid to the pension fund. Contributions will be paid to cover administrative expenses, administration rebates and death in service pensions. Expected regular contributions to be paid to the UK defined benefit plan for all participating entities for the year ending 31 December 2013 is approximately USD 9 million.

## Assumptions

The assumptions used in the measurement of the defined benefit obligation and net periodic pension cost for the Credit Suisse UK pension plan as at 31 December were as follows:

| Group and Bank | 2012 | 2011 |
|---|---|---|
| **Benefit obligations (%)** | | |
| Discount rate | 4.80 | 4.90 |
| Retail Price Inflation | 3.10 | 3.20 |
| Consumer Price Inflation | 2.40 | 2.20 |
| Pension increases [1] | 3.00 | 3.08 |
| Salary increases | 4.35 | 4.45 |
| **Net periodic pension cost (%)** | | |
| Discount rate | 4.90 | 5.60 |
| Salary increases | 4.45 | 4.70 |
| Expected long term rate of return on plan assets | 6.50 | 7.50 |

[1] Pension earned pre 6 April 1997 are subject to pension increases on a discretionary basis, which were considered to be Nil as of 31 December 2011.

## Mortality Assumptions

The assumptions for life expectancy for the 2012 benefit obligation pursuant to IAS 19 are based on the "SAPS light" base table with improvements in mortality in line with the core CMI 2011 projections and a scaling factor of 100%. Underpins to future mortality improvement have been considered with a long term year on year improvement of 1.25%.

The assumptions for life expectancy for the 2011 benefit obligation were based on the "00 Series" base table with improvements in mortality from 2000 in line with 80%/60% of the Long Cohort improvements for males/females, and a scaling factor of 90%. Underpins to future mortality improvement were also incorporated, the minimum year on year improvements being 1.25% p.a. The change in 2012 follows a mortality investigation carried out as part of the 31 December 2011 triennial funding valuation.

The post-retirement mortality assumptions are as follows:

| | 2012 | 2011 |
|---|---|---|
| Life expectancy at age 60 for current pensioners aged 60 (years) | | |
| ▪ Males | 29 | 29 |
| ▪ Females | 30 | 31 |
| Life expectancy at age 60 for future pensioners currently aged 40 (years) | | |
| ▪ Males | 31 | 32 |
| ▪ Females | 32 | 34 |

## Sensitivity Analysis

Changes in the principal assumptions used to measure the benefit obligation and total periodic pension cost would have had the following effects:

| | Increase USDM | Increase % | Decrease USDM | Decrease % |
|---|---|---|---|---|
| **Benefit obligation** | | | | |
| One-percentage point change | | | | |
| - 1%/ +1% Discount rate | 403 | 27 | (308) | (20) |
| +1% / -1% Inflation rate | 275 | 18 | (230) | (15) |
| +1% / -1% Salary increases rate | 10 | 1 | (10) | (1) |
| +1 / -1 year to life expectancy at 60 | 26 | 2 | (28) | (2) |
| | | | | |
| **Total periodic pension cost** | | | | |
| One-percentage point change | | | | |
| - 1% / +1% Expected return on assets | 20 | N/A | (20) | N/A |

## Plan assets and investment strategy

The Bank's defined benefit pension plan looks to minimise risk subject to adopting an investment strategy that has a reasonable expectation of achieving a certain level of return by investing in a range of asset classes of appropriate liquidity and security which will generate income and capital growth to meet, together with agreed contributions from the Bank, the cost of benefits. Risk tolerance is established through careful consideration of plan liabilities, plan funded status and corporate financial condition. Furthermore, equity investments are diversified across UK and non-UK stocks as well as between growth, value and small and large capitalisation stocks. Other assets such as hedge funds are used to enhance long term returns while improving portfolio diversification. The Fund has a medium term target of hedging a large proportion of interest rate and inflation risk arising from liabilities. Investment risk is measured and monitored on an ongoing basis through annual liability measurements, periodic asset/liability studies and quarterly investment portfolio reviews. To limit investment risk, the Bank's pension plans follow defined strategic asset allocation guidelines. Depending on the market conditions, these guidelines are even more limited on a short-term basis.

The Bank employs a building block approach in determining the long-term rate of return on pension plan assets. Historical markets are studied and assets with higher volatility are assumed to generate higher returns consistent with widely accepted capital market principles. The expected rate of return on plan assets used for the computation of the 2012 expenses was derived by aggregating the expected return for each asset class over the target asset allocation for the Fund as at 31 December 2011.

| | Fair value 2012 | % of total fair value of scheme assets 2012 | Fair value 2011 | % of total fair value of scheme assets 2011 |
|---|---|---|---|---|
| **Fair value of plan assets (USD million)** | | | | |
| Equity securities[1] | 465 | 21.5 | 657 | 35.4 |
| Debt securities | 1,027 | 47.5 | 770 | 41.4 |
| Alternative Investments (primarily Swaps) | 263 | 12.2 | 378 | 20.3 |
| Cash | 405 | 18.8 | 53 | 2.9 |
| **Fair value of plan assets** | **2,160** | **100** | **1,858** | **100.0** |

1 Including investment in unit trust product as of December 31, 2012 and 2011 for USD 210m and 312m, respectively, (mutual funds type of investment) which are reported under the category Equity securities as per the Bank policy but are not considered as Equity type of investment in the context of the investment strategy.

### Defined Contribution Pension Plans

The Bank also contributes to various defined contribution pensions primarily in the United Kingdom. The contributions in these plans during 2012 and 2011 were USD 14 million and USD 16 million respectively.

## 30. Employee Share-based Compensation and Other Compensation Benefits

Payment of share-based compensation and other compensation benefits is determined by the nature of the business, role, location and performance of the employee. Unless there is a contractual obligation, granting deferred compensation is solely at the discretion of senior management. Special deferred compensation granted as part of a contractual obligation is typically used to compensate new senior employees in a single year for forfeited awards from previous employers upon joining the Bank. It is the Bank's policy not to make multi-year guarantees.

Compensation expense for share-based and other awards that were granted as deferred compensation is recognised in accordance with the specific terms and conditions of each respective award and is primarily recognised over the future requisite service and vesting period, which is determined by the plan, retirement eligibility of employees, moratorium periods and certain other terms. Compensation expense for share based and other awards that were granted as deferred compensation also includes the current estimated outcome of applicable performance criteria, estimated future forfeitures and mark-to-market adjustments for certain awards that are still outstanding.

Total compensation expense for cash-settled share-based compensation plans recognised during 2012 and 2011 was USD 66 million and USD 56 million respectively. The total stock award liability recorded as at 31 December 2012 was USD103 million (2011: USD 92 million). The fair value used to calculate the stock award liability was the closing Credit Suisse Group share price as at 31 December 2012 CHF 22.26 (2011: CHF 22.07). The average weighted fair value of awards granted in 2012 was CHF 22.26 (2011: CHF 40.75). The intrinsic value of vested share based awards outstanding as at year end was USD19 million (2011: USD12 million).

### Performance Share Awards

Certain employees received a portion of their deferred variable compensation in the form of performance share awards, which are subject to explicit performance-related claw-back provisions. Performance share awards vest over three years, such that one third of the share awards vest on each of the three anniversaries of the date of the award. Each performance share award granted entitles the holder of award to receive one CSG share. Unlike the Phantom share awards, however, the unvested performance share awards are subject to a negative adjustment in the event of a divisional loss or a negative CSG ROE. Unvested performance shares are subject to a negative adjustment in the event of a divisional loss, unless there is a negative CSG ROE that would call for a negative adjustment greater than the divisional adjustment for the year, in which case the negative adjustment is based on the CSG's negative ROE. For employees in Shared Services, the negative adjustment only applies in the event of a negative CSG ROE and is not linked to the performance of the divisions. Performance share awards include a two-year moratorium on early retirement, determined from the grant date.

The fair value of each Jan 2013 Performance Share award was CHF 26.44, equivalent to the CSG's closing share price on the grant date.

Movements in the number of units outstanding were as follows:

| Group and Bank | 2012 | 2011 |
|---|---|---|
| **Number of units (millions)** | | |
| As at 1 January | - | - |
| Granted | 1.09 | - |
| Share transferred in/out | 0.03 | - |
| Delivered | - | - |
| Forfeited | (0.12) | - |
| **As at 31 December** | **1.00** | **-** |

## Phantom Share Awards

Share awards granted in January 2013 are similar to those granted in January 2012 and are awarded to certain employees in the Bank. The share awards, which have a three-year vesting period, align the interests of the Bank's employees with those of the shareholders and the performance of the Bank and comply with the expectations of regulators to grant a substantial portion of variable compensation in the form of share awards. Each share award granted entitles the holder of the award to receive one CSG share and does not contain a leverage component or a multiplier effect. The number of share awards was determined by dividing the deferred component of variable compensation being granted as shares by the average price of a CSG share over the twelve business days ended January 16, 2013. One third of the share awards vests on each of the three anniversaries of the grant date. The value of these share awards is solely dependent on the CSG share price at the time of delivery. Share awards granted in January 2011 have a four-year vesting period and vest one quarter on each of the four anniversaries of the grant date. Share awards include a two-year moratorium on early retirement, determined from the grant date.

The fair value of each January 2013 share award was CHF 26.44, equivalent to the CSG's closing share price on the grant date.

The share awards include other awards, such as blocked shares, and special awards, which may be granted to new employees. These awards entitle the holder to receive one CSG share, subject to continued employment with the Bank, contain restrictive covenants and cancellation provisions and generally vest between zero and five years.

In order to comply with regulatory requirements, the CSG awarded an alternative form of share awards as a component of unrestricted cash to certain senior employees. For 2012, 2011 and 2010, these employees received a portion of the amount they otherwise would have received in cash in the form of blocked shares. The shares remain blocked for a period of time, which ranges from six months to three years, depending on the location, after which they are no longer subject to restrictions. Blocked shares granted on January 17, 2013 vest immediately upon grant, have no future service requirements and were attributed to services performed in 2012.

Movements in the number of units outstanding were as follows:

| Group and Bank | 2012 | 2011 |
|---|---|---|
| **Number of units (millions)** | | |
| As at 1 January | 2.58 | 1.13 |
| Granted | 1.75 | 2.44 |
| Share transferred out | 0.07 | (0.12) |
| Delivered | (1.10) | (0.70) |
| Forfeited | (0.25) | (0.17) |
| **As at 31 December** | **3.05** | **2.58** |

### Plus Bond awards

Certain employees received a portion of their deferred variable compensation in the form of Plus Bond awards. The Plus Bond award is essentially a fixed income instrument, denominated in US dollars, which provides a coupon payment that is commensurate with market-based pricing. Plus Bond award holders are entitled to receive semi-annual cash payments on their adjusted award amounts at the rate of London Interbank Offered Rate plus 7.875% per annum until settlement. The Plus Bond will settle in the summer of 2016 based on the amount of the initial award less portfolio losses, if any, in excess of a first loss portion retained by CSG of approximately USD 600 million. The value of the Plus Bond awards is based on the performance of a portfolio of unrated and sub-investment-grade asset-backed securities that are held in inventory by various trading desks of CSG's Investment Banking division. While the Plus Bond award is a cash-based instrument, CSG reserves the right to settle the award in CSG shares based on the share price at the time of final distribution. In addition, subject to oversight procedures, CSG retains the right to prepay all or a portion of the Plus Bond award in cash at any time and, in the event of certain regulatory developments or changes on capital treatment, exchange the award into a CSG share award. Similar to the PAF2 awards, the Plus Bond award plan contributes to a reduction of CSG's risk-weighted assets and constitutes a risk transfer from CSG to the Plus Bond award holders.

The Plus Bonds were fully vested and expensed as of the grant date of December 31, 2012. Compensation expense will continue to be updated at each reporting period date to reflect any change in the underlying fair value of the Plus Bond awards until the awards are finally settled. Total compensation expense recognised during the year ended December 31, 2012 was USD15 million. There is no unrecognised compensation expense as of December 31, 2012.

Certain employees were given the opportunity in early 2013 to voluntarily reallocate a portion of the share award component of their deferred awards into the Plus Bond award. The Plus Bonds provided to employees through the voluntary reallocate offer will vest on January 17, 2016 and will be expensed over the vesting period. Compensation expense will continue to be updated at each reporting period date to reflect any change in the underlying fair value of the Plus Bond awards until the awards are finally settled. Total compensation expense recognised during the year ended December 31, 2012 was USD nil.

### 2012 Restricted Cash Awards

Certain employees received the cash component of their variable compensation in the form of 2012 Restricted Cash Awards. These awards are fully settled in cash on the grant date subject to a pro-rata repayment by the employee in the event of voluntary resignation or termination for cause within three years of the award grant.

On January 17, 2013, the Bank granted Restricted Cash Awards with a three-year vesting period, subject to early retirement rules. Total compensation expense recognised during the year ended December 31, 2012 was USD NIL.

On January 20, 2011, the Bank granted Restricted Cash Awards with a two-year vesting period. Total compensation expense recognised during the year ended December 31, 2012 was USD 4 million (2011: USD 24 million). There is no unrecognised compensation expense as of December 31, 2012.

### 2011 Partner Asset Facility ('PAF2')

As part of the 2011 annual compensation process, CSG awarded a portion of their deferred variable compensation for certain employees in the form of 2011 Partner Asset Facility (PAF2) units. PAF2 units are essentially fixed income structured notes that are exposed to a portion of the credit risk that arises in CSG's derivative activities, the majority of which are in CSi, including both current and possible future swaps and other derivative transactions. The value of the award (for both the interest accrual and the final redemption) will be reduced if the amount of realised credit losses from a specific reference portfolio exceeds a pre-defined threshold. CSi will bear the first USD 500 million of any losses. PAF2 holders, across a number of CS group entities including CSi, will bear any losses in excess of USD 500 million, up to the full amount of the deferred compensation awarded.

Certain employees received PAF2 awards which vested in the first quarter of 2012. The award holders are subject to non-compete and non-solicit provisions that result in the cancellation of the award upon voluntary termination of employment for three years from the grant date.

The PAF2 units have a stated maturity of four years, but may be extended to nine years at the election of either CSG or the holders acting collectively. This election will not be made later than the end of the third year following the grant date. PAF2 units are denominated in US dollars. Holders will receive a semi-annual cash interest payment equivalent to an annual return of 6.5% (USD-denominated awards) applied to the then current balance of the PAF2 units. At maturity, PAF2 holders will receive a final settlement in an amount equal to the original award value less any losses. CSG can settle the PAF2 units in cash or an equivalent value in shares at its discretion.

In January 2012, CSG awarded PAF2 units and the associated compensation expenses were fully expensed in the first quarter of 2012 as the awards were fully vested as of March 31, 2012. Compensation expense will continue to be updated at each reporting period date to reflect any change in the underlying fair value of the PAF2 awards until the awards are finally settled. Total compensation expense recognised during the year ended December 31, 2012 was USD 34 million (2011: USD NIL). There is no unrecognised compensation expense as of December 31, 2012.

### Adjustable Performance Plan Awards ('APPA')

The Adjustable Performance Plan is a deferred, cash-based plan for certain employees. CSG introduced and granted Adjustable Performance Plan awards as part of deferred compensation for 2009 and 2010 (2010 Adjustable Performance Plan). The 2009 Adjustable Performance Plan awards are fully vested and were fully expensed as of December 31, 2012 and will be due for delivery in the first half of 2013.

The 2010 Adjustable Performance Plan awards vest over a four-year period, with the final payout value subject to an upward or downward adjustment, depending on the financial performance of the specific business areas and CSG ROE.

The adjustments are determined on an annual basis, increasing or decreasing the outstanding balances by a percentage equal to CSG ROE, unless the division that granted the awards incurs a pre-tax loss. In this case, outstanding awards in that division will be subject to a negative adjustment of 15% for every CHF 1 billion of loss, unless a negative CSG ROE applies for that year and is greater than the divisional adjustment. For employees in Shared Services and other support functions all outstanding Adjustable Performance Plan awards are linked to CSG's adjusted profit or loss and CSG ROE, but are not dependent upon the adjusted profit or loss of the business areas that they support.

In 2012, CSG executed a voluntary exchange offer, under which employees had the right to voluntarily convert all or a portion of their respective unvested Adjustable Performance Plan cash awards into Adjustable Performance Plan share awards at a conversion price of CHF 16.29. Each Adjustable Performance Plan share award has a grant-date fair value of CHF 16.79 and contains the same contractual term, vesting period, performance criteria and other terms and conditions as the original Adjustable Performance Plan cash award.

Total compensation expense recognised for Adjustable Performance Plan cash awards during the year ended December 31, 2012 was USD18 million (2011: USD 70 million).

## Scaled Incentive Share Unit ('SISU')

The Scaled Incentive Share Units ("SISUs") plan is a share-based, long-term incentive plan. SISUs were granted in January 2010 as part of 2009 variable deferred compensation. SISUs are similar to ISUs (refer to Incentive Share Unit) except with four-year vesting, subject to early retirement rules, and the leverage component contains an additional performance condition which could increase or decrease the number of any additional shares. The base component of the SISUs awarded on the grant date will vest equally over the four-year vesting period whereas the leverage component will only vest on the fourth anniversary of the grant date. The new performance condition links the final delivery of additional shares to the CSG average ROE and if the CSG average ROE over the four-year period is higher than a pre-set target established at the grant date, the number of additional shares calculated by reference to the average CSG share price increase will be adjusted positively, and if it is below the target, the number of additional shares will be adjusted negatively, but not below zero. The final number of additional shares to be delivered at the end of the four-year period is therefore determined first on the basis of the CSG share price development (share price multiplier) and then on the basis of the CSG average ROE development (ROE multiplier). CSG shares are delivered shortly after the SISU base component and SISU leverage component vest. SISUs include a two-year moratorium on early retirement, determined from the grant date.

The fair value of the 2010 SISU base unit was CHF 50.30 and the fair value of the 2010 SISU leverage units was CHF 13.44. For the SISUs granted in January 2010, the number of additional shares per SISU was capped at a maximum of three times the grant date value, with a delivery of no more than three shares, prior to the application of the scaling factor, which can be as high as up to 2.5.

Movements in the number of SISUs outstanding were as follows:

| | 2012 | | 2011 | |
|---|---|---|---|---|
| | Base | Leverage | Base | Leverage |
| **SISU Awards (USD million)** | | | | |

| **As at 31 December** | **0.60** | **0.91** | **0.92** | **1.07** |

## Incentive Share Unit ('ISU')

The Incentive Share Units ("ISUs") were the main form of share-based variable deferred compensation for all employees from 2006 to 2009. An ISU is similar to a share, but offers additional upside depending on the development of the CSG share price, compared to predetermined targets set on the grant date. For each ISU granted, the employee will receive at least one CSG share (ISU base unit) over a three-year period vesting and could receive additional shares (ISU leverage unit) at the end of the three-year vesting period. The number of ISU leverage units to be converted to additional shares is calculated by multiplying the total number of ISU base units granted, less forfeitures, by a share price multiplier. The share price multiplier is determined based on the actual increase in the weighted-average monthly share price during the contractual term of the award versus the share price at grant date. One third of the ISU base units vests at the first anniversary of the grant date, one third at the second anniversary of the grant date and one third at the third anniversary. The ISU leverage units vest only on the third anniversary of the grant date. Shares are delivered shortly after the ISU base units and the ISU leverage units vest. ISUs include a two-year moratorium on early retirement, determined after the grant date. For the ISUs granted in January 2010, the number of additional shares per ISU was capped at a maximum of three times the grant value, with a delivery of no more than five shares.

In 2012, the ISU leverage granted in 2009 were settled with a value for each outstanding leverage unit equivalent to 0.986 CSG shares. In 2011, the ISU leverage units granted in 2008 were settled but did not have a value at settlement as the CSG share price performance was below the minimum predefined target of CHF 58.45.

Movements in the number of ISUs outstanding were as follows:

| **Group and Bank** | **2012** | | **2011** | |
|---|---|---|---|---|
| | **Base** | **Leverage** | **Base** | **Leverage** |
| **ISU Awards (millions)** | | | | |

| **As at 31 December** | **0.11** | **0.31** | **0.58** | **1.22** |

### Cash Retention Awards ('CRA')

For 2008, certain employees received deferred compensation in the form of Cash Retention Awards (CRA). These CRA payments, which were made in the first quarter of 2009, were subject to vesting rateably over a two-year period and other conditions, and any unvested CRA would have had to be repaid if a claw-back event, such as voluntary termination of employment, occurred. These awards were fully vested in January 2011.

### 2008 Partner Asset Facility ('PAF')

As part of the 2008 annual compensation process, the Bank awarded senior employees of certain divisions the majority of the deferred compensation in the form of 2008 PAF awards, denominated in US dollars. The PAF awards are indexed to, and represent a first-loss interest in, a specified pool of illiquid assets (Asset Pool) that originated in CSG Investment Banking.

The notional value of the Asset Pool was based on the fair market value of the assets within the Asset Pool on 31 December 2008, and those assets will remain static throughout the contractual term of the award or until liquidated. The PAF holders will participate in the potential gains on the Asset Pool if the assets within the pool are liquidated at prices above the initial fair market value. If the assets within the Asset Pool are liquidated at prices below the initial fair market value, the PAF holders will bear the first loss on the Asset Pool. As a result, a significant portion of risk positions associated with the Asset Pool has been transferred to the employees and removed from CSG's risk-weighted assets, resulting in a reduction in capital usage.

The PAF awards, which have a contractual term of eight years, are fully vested. All PAF awards remain subject to non-compete/non-solicit provisions that expire in respect of one-third of the awards on each of the three anniversaries of the grant date. Each PAF holder will receive a semi-annual cash interest payment of LIBOR plus 250 basis points applied to the notional value of the PAF award granted throughout the contractual term of the award. Beginning in the fifth year after the date of grant, the PAF holders will receive an annual cash payment equal to 20% of the notional value of the PAF awards if the fair market value of the Asset Pool in that year has not declined below the initial fair market value of the Asset Pool. In the final year of the contractual term, the PAF holders will receive a final settlement in cash equal to the notional value, less all previous cash payments made to the PAF holder, plus any related gains or less any related losses on the liquidation of the Asset Pool.

Compensation expense will be updated at each reporting period date to reflect any change in the underlying fair value of the PAF awards until the awards are finally settled. Total compensation expense / (gain) recognised during the year ended 31 December 2012 was USD 21 million (2011: (USD1 million)). There is no unrecognised compensation expense as of 31 December 2012.

Effective 31 December 2011, existing PAF holders were given a voluntary election to make a value-for-value exchange of their existing PAF awards for a new PAF award linked to an expanded portfolio of reference assets. There was no impact on compensation expense for 2011.

### Performance Incentive Plan units (PIPs)

As part of its annual incentive performance bonus process for 2004 and 2005, the Bank granted PIP share units during 2005 and 2006, respectively. PIP units are long-term retention incentive awards requiring continued employment with the Bank subject to restrictive covenants and cancellation provisions, and vest evenly over a five-year period. Each PIP unit settled for a specified number of registered CSG shares subsequent to the fifth anniversary of the grant date based on the achievement of: (i) earnings performance as compared to predefined targets (performance conditions); and (ii) CSG share price performance compared to predefined targets and CSG share price performance relative to peers (market conditions). The performance conditions determine the multiplier used to convert the initial PIP units into the final number of PIP units. The market conditions determine the number of CSG shares that each final PIP unit will convert into at settlement.

The PIP II units granted in 2006 were settled in 2011 and did not have a value at settlement. This was due to the CSG share price performance being below the minimum predefined target of CHF 47.

Movements in the number of PIP units outstanding were as follows:

| **Group and Bank** | **2012** | **2011** |

## 31. Related Parties

The CSi group is controlled by CSG, its ultimate parent, which is incorporated in Switzerland. The CSi group's parent company, which holds a majority of the voting rights in the undertaking, is Credit Suisse AG, which is incorporated in Switzerland.

The CSi group has significant related party balances with subsidiaries and affiliates of CSG. These transactions largely comprise derivative trades, as the Bank is the principal risk taker for derivatives within the CS group, as well as funding trades via use of loans or deposits, repurchase or repurchase agreements. In addition, the ordinary, preference and participating shares are issued to CSG and subsidiaries of CSG, as outlined in Note 28 – Share Capital and Share Premium. The Bank is also charged for operating costs that mainly relate to employee-related services and other business expenses. Further, these transactions also include transfer pricing income/charges with CS group entities that provide services in respect of the global derivatives business which is centrally booked in the Bank.

The Bank generally enters into the above transactions in the ordinary course of business on market terms that could be obtained from unrelated parties.

In addition to the above, liabilities due to the CS group's own defined benefit pension funds as of 31 December 2012 of USD 274 million (2011: USD 391 million) are reflected in the CSi group's Consolidated Statement of Financial Position.

## c) Remuneration

### Disclosure required by the Companies Act 2006

### Remuneration of Directors

| | 2012 USD'000 | 2011 USD'000 |
|---|---|---|
| Emoluments | 2,619 | 3,681 |
| Long term incentive schemes: | | |
| ■ Amounts paid under Deferred Cash Awards | 4,020 | 2,462 |
| ■ Amounts delivered under Shared Based Awards | 4,894 | 5,703 |
| **Total** | **11,533** | **11,846** |
| Compensation for loss of office | 4,393 | - |
| Bank's contributions to defined contribution and benefits plan | 131 | 140 |
| **Total** | **16,057** | **11,986** |

Emoluments include amounts paid to or receivable by the Directors. Only vested Cash Retention Awards are included in emoluments. Long term incentive schemes consist of deferred cash awards and share based awards. Deferred cash awards are included in the period when the amounts vest and are paid, and share based awards are included in the period when the amounts vest and are delivered.

Where directors perform services for a number of companies within the CS group, the total remuneration payable to each director has been apportioned to the respective entities based on a time spent per company allocation for that director.

The aggregate of emoluments and deferred cash awards paid to or receivable by the highest paid director was USD 6,641,000 (2011: USD 2,671,000). The director was also a member of a defined contribution pension plan and the contribution paid during the year into the plan was USD 11,000 (2011: USD 7,000). During the year the highest paid director also received an entitlement to shares under a long term incentive scheme.

The amounts included in the Companies Act disclosures are on a different basis than the recognition requirements of IFRS 2 and IAS 37 and the disclosure requirements of IAS 24. The aggregate amount of remuneration accrued in the Bank's accounts for directors in accordance with IFRS requirements for 2012 was USD 15,915,000 (2011: USD 11,729,000).

## d) Number of Directors and Benefits

| | **2012** | **2011** |
|---|---|---|
| **Number of Directors** | | |
| Retirement benefits are accruing to the following number of Directors under: | | |
| Defined contribution schemes | 2 | 6 |
| No scheme | 3 | 1 |
| Both defined contribution and defined benefit | 4 | 5 |
| | | |
| The number of Directors who exercised share options | - | - |
| | | |
| **Directors in respect of whom services were received or receivable under long term incentive schemes** | **9** | **12** |

## e) Remuneration of Key Management Personnel

| | **2012** | **2011** |
|---|---|---|
| **Remuneration of Key Management Personnel (USD' 000)** | | |
| Emoluments | 8,184 | 10,314 |
| Long term incentive schemes | 24,478 | 17,991 |
| **Total** | **32,662** | **28,305** |
| Compensation for loss of office | 5,293 | - |
| Bank's contributions to defined contribution and benefits plan | 243 | 572 |
| **Total** | **38,198** | **28,877** |

The numbers disclosed in the 'Remuneration of Key Management Personnel' are based on amounts accrued in the financial statements for all emoluments and long term incentive schemes.

Where Key Management Personnel perform services for a number of companies within the CS group, the total remuneration payable to each key management person has been apportioned to the respective entities based on a time spent per company allocation for that key management person.

### CSG Shares awarded to Key Management Personnel

| | 2012 | 2011 |
|---|---|---|
| Number of other shares | 1,011,321 | 575,673 |

The shares included in the table are the shares accrued in the period under the requirements of IFRS 2. These numbers differ from the share awards included in the Company's Act disclosures above, which are disclosed in the period in which they vest and are delivered.

Key management personnel are those persons having authority and responsibility for planning, directing and controlling the activities of the CSi group, directly or indirectly, including any director of the CSi group.

Key management personnel include Directors and the members of EMEA ('Europe, Middle East and Africa') Operating Committee.

### f) Loans and Advances to Directors and Key Management Personnel

There were no loans outstanding to or due from Directors or key management personnel of the CSi group at 31 December 2012 (2011: USD Nil).

## 32. Employees

The average number of persons employed during the year was as follows:

| Group and Bank | 2012 | 2011 |
|---|---|---|
| Front office | 380 | 417 |
| Back office | 439 | 504 |
| **Total** | **819** | **921** |

The CSi group receives a range of services from related companies, in particular from fellow subsidiary Credit Suisse Securities (Europe) Limited which is the primary Credit Suisse employing entity in the UK. The headcount related to these services cannot be accurately ascertained and is not therefore included in the above numbers. Staff costs and staff numbers do not differ between Bank and CSi group.

## 33. Derivatives and Hedging Activities

Derivatives are generally either privately negotiated OTC contracts or standard contracts transacted through regulated exchanges. The Bank's most frequently used freestanding derivative products, entered into for trading and risk management purposes, include interest rate, equity, cross currency and credit default swaps, interest rate and foreign currency options, foreign exchange forward contracts, and foreign currency and interest rate futures.

Furthermore, the Bank enters into contracts that are not considered derivatives in their entirety but include embedded derivatives features. Such transactions primarily include issued and purchased structured debt instruments where the return may be calculated by reference to an equity security, index, or third-party credit risk or that have non-standard or foreign currency terms.

On the date the derivative contract is entered into, the Bank designates the derivative as belonging to one of the following categories:

- a trading activity;
- a risk management transaction that does not qualify as a hedge under accounting standards (referred to as an economic hedge); or
- a hedge of the fair value of a recognised asset or liability.

### Trading Activities

The Bank is active in most of the principal trading markets and transacts in many popular trading and hedging products. As noted above, this includes the use of swaps, futures, options and structured products (custom transactions using combinations of derivatives) in connection with its sales and trading activities. Trading activities include market-making, positioning and arbitrage activities. The majority of the Bank's derivatives held as at 31 December 2012 were used for trading activities.

### Economic Hedges

Economic hedges arise when the CSi group enters into derivative contracts for its own risk management purposes, but the contracts entered into do not qualify for hedge accounting under IFRS. These economic hedges include the following types:

- interest rate derivatives to manage net interest rate risk on certain banking business assets and liabilities;
- foreign exchange derivatives to manage foreign exchange risk on certain banking business revenue and expense items, as well as on banking business assets and liabilities; and
- credit derivatives to manage credit risk on certain loan portfolios.

The following table sets forth details of trading derivatives instruments:

| Group | 2012 | | 2011 | |
|---|---|---|---|---|
| | Positive replacement value | Negative replacement value | Positive replacement value | Negative replacement value |
| **Trading derivatives instruments (USD million)** | | | | |
| Forwards and forward rate agreements | 1,997 | 1,960 | 2,666 | 2,371 |
| Swaps | 708,749 | 699,803 | 716,621 | 707,041 |
| Options bought and sold (OTC) | 68,235 | 68,472 | 70,179 | 70,751 |

## 34. Guarantees and Commitments

The following tables set forth details of contingent liabilities associated with guarantees and other commitments:

| Group and Bank | Maturity | | | | Total gross | Collateral | Net of |
|---|---|---|---|---|---|---|---|
| **31 December 2012** | **<1 year** | **1-3 years** | **3-5 years** | **>5 years** | **amount** | **received** | **collateral** |
| **Guarantees (USD million)** | | | | | | | |
| Credit guarantees and similar instruments | 204 | 659 | - | - | 863 | 19 | 844 |
| Performance guarantees and similar instruments | 3 | 92 | - | - | 95 | - | 95 |
| **Total guarantees** | **207** | **751** | **-** | **-** | **958** | **19** | **939** |

| Group and Bank | Maturity | | | | Total gross | Collateral | Net of |
|---|---|---|---|---|---|---|---|
| **31 December 2012** | **<1 year** | **1-3 years** | **3-5 years** | **>5 years** | **amount** | **received** | **collateral** |
| **Other commitments (USD million)** | | | | | | | |
| Irrevocable commitments under documentary credit | 7 | 25 | - | - | 32 | - | 32 |
| Loan commitments | 5,732 | 4,633 | 1,516 | 19 | 11,900 | 52 | 11,848 |
| **Total other commitments** | **5,739** | **4,658** | **1,516** | **19** | **11,932** | **52** | **11,880** |

| Group and Bank | Maturity | | | | Total gross | Collateral | Net of |
|---|---|---|---|---|---|---|---|
| **31 December 2011** | **<1 year** | **1-3 years** | **3-5 years** | **>5 years** | **amount** | **received** | **collateral** |
| **Guarantees (USD million)** | | | | | | | |
| Credit guarantees and similar instruments | 107 | 1,274 | 300 | - | 1,681 | 175 | 1,506 |
| Performance guarantees and similar instruments | 31 | 1,261 | - | - | 1,292 | - | 1,292 |
| **Total guarantees** | **138** | **2,535** | **300** | **-** | **2,973** | **175** | **2,798** |

| Group and Bank | Maturity | | | | Total gross | Collateral | Net of |
|---|---|---|---|---|---|---|---|
| **31 December 2011** | **<1 year** | **1-3 years** | **3-5 years** | **>5 years** | **amount** | **received** | **collateral** |
| **Other commitments (USD million)** | | | | | | | |
| Irrevocable commitments under documentary credit | 10 | 63 | 29 | - | 102 | - | 102 |
| Loan commitments | 3,801 | 4,316 | 1,579 | 281 | 9,977 | 307 | 9,670 |
| **Total other commitments** | **3,811** | **4,379** | **1,608** | **281** | **10,079** | **307** | **9,772** |

Credit guarantees are contracts that require the CSi group to make payments, should a third party fail to do so under a specified existing credit obligation. For example, in connection with its corporate lending business and other corporate activities, the CSi group provides guarantees to counterparties in the form of standby letters of credit, which represent obligations to make payments to third parties if the counterparty fails to fulfill its obligation under a borrowing arrangement or other contractual obligation.

Performance guarantees and similar instruments are arrangements that require contingent payments to be made when certain performance-related targets or covenants are not met. Such covenants may include a customer's obligation to deliver certain products and services or to perform under a construction contract. Performance-related guarantees are frequently executed as part of project finance transactions.

Loan commitments include unused credit facilities that cannot be revoked at any time without prior notice.

### Lease Commitments

The following table sets forth details of future minimum operating lease commitments under non-cancellable operating leases:

| Group and Bank | 2012 | 2011 |
|---|---|---|
| **Operating lease commitments (USD million)** | | |
| Up to 1 year | 105 | 68 |
| From 1 year and no later than 5 years | 423 | 270 |
| From 5 years and over | 1,286 | 600 |
| **Future operating lease commitments** | **1,814** | **938** |
| Less minimum non-cancellable sublease rentals | (145) | (173) |
| **Total net future minimum operating lease commitments** | **1,669** | **765** |

The future operating lease commitments include service charges of USD 17.2 million (2011: USD 13.6 million).

The following table sets forth details of rental expenses for all operating leases:

| Group and Bank | 2012 | 2011 |
|---|---|---|
| **Net rental expense (USD million)** | | |
| Minimum rentals | 100 | 67 |
| Sublease rental income | (88) | (42) |
| **Total net rental expenses** | **12** | **25** |

### Contingent Liabilities and Other Commitments

The Bank is party to various legal proceedings as part of its normal course of business. The Directors of the Bank believe that the aggregate liability, if any, resulting from these proceedings will not materially prejudice the financial position of the Bank and have been provided for where deemed necessary or in accordance with accounting policy.

## 35. Securitisations, Special Purpose Entities and Other Structured Transactions

### Consolidated SPEs

The CSi group is involved in the formation of Special Purpose Entities ('SPEs') primarily for the purpose of providing clients with structured investment opportunities, asset securitisation transactions and for buying or selling credit protection. The CSi group consolidates SPEs when the substance of the relationship between the CSi group and the SPE indicates that the SPE is controlled by the CSi group. Consideration is given to the CSi group's ability to control the activities of the SPE and the CSi group's exposure to the risks and benefits of the SPE.

| Group | 2012 | 2011 |
|---|---|---|
| **SPE exposures (USD million)** | | |
| **Consolidated SPEs** | | |
| CDO | - | - |
| Financial intermediation | 1,649 | 1,826 |
| **Total assets of consolidated SPEs (excluding those held with bank)** | **1,649** | **1,826** |

The aggregate Statement of Financial Positions in relation to consolidated SPEs includes consolidation of China A Share Fund jointly managed by Credit Suisse AG and Industrial and Commercial Bank of China. CSi holds 80% of the total units of the fund and the remaining 20% are held by Credit Suisse Securities (Europe) Limited. CSi group has consolidated the entire fund and the remaining equity not attributable to the CSi group is represented by noncontrolling interest.

### Non-consolidated SPEs

| Group and Bank | 2012 | 2011 |
|---|---|---|
| **SPE exposures (USD milion)** | | |
| **Non-consolidated SPEs** | | |
| CDO | 4,146 | 6,799 |
| Financial intermediation | 24,154 | 29,783 |
| **Total assets of non-consolidated SPEs** | **28,300** | **36,582** |
| | | |
| **Total maximum exposure to loss of non-consolidated SPEs** | | |
| CDO | 14 | 29 |
| Financial intermediation | 2,510 | 4,120 |

The non-consolidated SPEs table provides the carrying amounts and classification of the assets and liabilities recorded in the CSi group's Consolidated Statement of Financial Position, maximum exposure to loss and total assets of the non-consolidated SPEs.

Maximum exposure to loss represents non-consolidated SPEs that are recorded by the CSi group (for example, direct holdings in vehicles, loans and other receivables), as well as notional amounts of guarantees and off-balance sheet commitments which are variable interests that have been extended to non-consolidated SPEs. Such amounts, particularly notional amounts of derivatives and guarantees, do not represent the anticipated losses in connection with these transactions as they do not take into consideration the effect of collateral, recoveries or the probability of loss. In addition, they exclude the effect of offsetting financial instruments that are held to mitigate these risks and have not been reduced by unrealised losses previously recorded by the CSi group in connection with guarantees or derivatives.

Non-consolidated SPE assets are related to the non-consolidated SPEs with whom the CSi group has interests. These amounts represent the assets of the exposures the CSi group has with the entity and thus are not amounts that are considered for risk management purposes.

Certain SPEs have not been included in the following table including SPEs structured by third parties in which the CSi group's interest is in the form of securities held in the CSi group's inventory, certain single-asset financing vehicles not sponsored by the CSi group to which the CSi group provides financing but has very little risk of loss due to over-collateralisation and guarantees, failed sales where the CSi group does not have any other holdings and other entities out of scope.

The non-consolidated SPEs are SPEs where CSi has a continuing involvement with the SPE (including both CSi and third party sponsored) and does not have the majority of the risks and rewards of ownership.

The Bank will consider all possible trigger events which would impact upon the control of an SPE as set out in Note 3 – Critical Accounting Estimates and Judgements in Applying Accounting Policies, including those we do not currently consolidate, and reflect this in Bank's current determination as to whether or not the Bank should consolidate.

The aggregate Statement of Financial Positions value (including amounts held with the Bank) in relation to Consolidated SPEs is shown below.

| Group | 2012 | 2011 |
|---|---|---|
| **Assets (USD million)** | | |
| Cash and due from banks | 137 | 44 |
| Other financial assets designated at fair value through profit or loss | 174 | - |
| Trading assets | 1,387 | 2,232 |
| Investment property | 518 | 561 |
| Current tax assets | - | - |
| Other assets | 4 | - |
| Property and equipment | 15 | 15 |
| **Total assets** | **2,235** | **2,852** |
| | | |
| **Liabilities (USD million)** | | |
| Deposits | 128 | 120 |
| Trading liabilities | 331 | 602 |
| Short term borrowings | - | - |
| Other financial liabilities designated at fair value through profit or loss | 1,775 | 2,121 |
| Other liabilities | 11 | 2 |
| Share capital | (32) | 7 |
| Subsidiaries acquired in the year | 22 | |
| **Total liabilities** | **2,235** | **2,852** |

## 36. Financial Instruments

### Fair value of financial instruments carried at fair value

Fair value is the amount for which an asset could be exchanged, or a liability settled, between knowledgeable, willing parties in an arm's length transaction. The fair value of the majority of the CSi group's financial instruments is based on quoted prices in active markets or observable inputs. These instruments include government and agency securities, certain CP, most investment grade corporate debt, certain high yield debt securities, exchange-traded and certain OTC derivative instruments and most listed equity securities.

In addition, the CSi group holds financial instruments for which no prices are available and which have little or no observable inputs. Further deterioration of financial markets could significantly impact the value of these financial instruments and the results of operations. For these instruments, the determination of fair value requires subjective assessment and varying degrees of judgement, depending on liquidity, concentration, pricing assumptions, the current economic and competitive environment and the risks affecting the specific instrument. In such circumstances, valuation is determined based on management's own assumptions about the assumptions that market participants would use in pricing the asset or liability, including assumptions about risk. These instruments include certain OTC derivatives, most mortgage-related and Collateralised Debt Obligation ('CDO') securities, certain equity derivatives and equity-linked securities, certain loans and credit products, including leveraged finance, certain syndicated loans and certain high-grade bonds, and life insurance instruments.

The fair value of financial assets and liabilities is impacted by factors such as benchmark interest rates, prices of financial instruments issued by third parties, commodity prices, foreign exchange rates and index prices or rates. In addition, valuation adjustments are an integral part of the valuation process when market prices are not indicative of the credit quality of a counterparty, and are applied to both OTC derivatives and debt instruments. The impact of changes in a counterparty's credit spreads (known as credit valuation adjustments ('CVA')) is considered when measuring the fair value of assets and the impact of changes in the CSi group's own credit spreads (known as debit valuation adjustments ('DVA')) is considered when measuring the fair value of its liabilities. For OTC derivatives, the impact of changes in both the CSi group's and the counterparty's credit standing is considered when measuring their fair value, based on current CDS prices. The adjustments also take into account contractual factors designed to reduce the CSi group's credit exposure to a counterparty, such as collateral held and master netting agreements. For hybrid debt instruments with embedded derivative features, the impact of changes in the CSi group's credit standing is considered when measuring their fair value, based on current funded debt spreads.

The CVA adjustment is computed on a portfolio basis, by integrating the discounted recovery-adjusted expected positive exposure of the underlying portfolio over the counterparty default period between today and the final maturity of the portfolio. The default probabilities are determined from CDS spreads.

### Fair value hierarchy

The financial instruments carried at fair value were categorised under the three levels of the IFRS fair value hierarchy as follows:

- Level 1: Quoted market prices (unadjusted) in active markets for identical assets and liabilities.
- Level 2: Inputs other than quoted prices included within Level 1 that are observable for the asset or liabilities, either directly (i.e. as prices) or indirectly (i.e. derived from prices).
- Level 3: Inputs for the asset or liability that is not based on observable market data (unobservable inputs).

For cash and other liquid assets and money market instruments maturing within three months, the fair value is generally based on observable inputs. For those items with a stated maturity exceeding three months, fair value is calculated using a discounted cash flow analysis.

### Qualitative disclosures of valuation techniques

### Money market instruments

Traded money market instruments include instruments such as bankers' acceptances, certificates of deposit, commercial papers, book claims, treasury bills and other rights, which are held for trading purposes. Valuations of money market instruments are generally based on observable inputs.

### Debt securities

Government debt securities typically have quoted prices in active markets and are categorised as Level 1 instruments. For debt securities for which market prices are not available, valuations are based on yields reflecting credit rating, historical performance, delinquencies, loss severity, the maturity of the security, recent transactions in the market or other modelling techniques, which may involve judgement. For those securities where the price or model inputs are observable in the market they are categorised as Level 2 instruments, while those securities where prices are not observable, and significant model inputs are unobservable, they are categorised as Level 3.

### Corporate bonds

Corporate bonds are priced to reflect current market levels either through recent market transactions or to broker or dealer quotes.

Where a market price for the particular security is not directly available, valuations are obtained based on yields reflected by other instruments in the specific or similar entity's capital structure and adjusting for differences in seniority and maturity, benchmarking to a comparable security where market data is available (taking into consideration differences in credit, liquidity and maturity) or through the application of cash flow modelling techniques utilising observable inputs, such as current interest rate curves and observable CDS spreads. The majority of Corporate Bonds are categorised as Level 2.

### CMBS, RMBS and ABS/CDO structures

Values of Residential Mortgage Backed Securities ('RMBS'), Commercial Mortgage Backed Securities ('CMBS') and other Assets Backed Securities ('ABS') may be available through quoted prices, which are often based on the prices at which similarly structured and collateralised securities trade between dealers and to and from customers. Values of RMBS, CMBS and other ABS for which there are no significant observable inputs are valued using benchmarks to similar transactions or indices and other valuation models.

For most structured debt securities determination of fair value requires subjective assessment depending on liquidity, ownership concentration, and the current economic and competitive environment. Valuation is determined based on management's own assumptions about how market participants would price the asset.

Collateralised bond and loan obligations are split into various structured tranches and each tranche is valued based upon its individual rating and the underlying collateral supporting the structure. Valuation models are used to value both cash and synthetic CDOs. The majority of CMBS/RMBS/ABS/CDO structures are categorised as Level 3.

### Equity securities

The majority of the CSi group's positions in equity securities are traded on public stock exchanges for which quoted prices are readily and regularly available and are therefore categorised as Level 1 instruments. Level 2 equities include fund-linked products, convertible bonds or equity securities with restrictions and therefore are not traded in active markets.

### Fund-linked products

Fund-linked products consist of investments in third-party hedge funds and funds of funds. The method of measuring fair value for these investments is the same as those described for other alternative capital investments below.

### Convertible bonds

Convertible bonds are generally valued using observable pricing sources. For a small minority of convertible bonds, no observable prices are available, and valuation is determined using internal and external models, for which the key inputs include stock prices, dividend rates, credit spreads (corporate and sovereign), yield curves, foreign exchange rates, prepayment rates and borrowing costs and single stock and equity market volatility.

### Derivatives

Derivatives held for trading purposes or used in hedge accounting relationships include both OTC and exchange traded derivatives. The fair values of exchange-traded derivatives measured using observable exchange prices are included in Level 1 of the fair value hierarchy. Some observable exchange prices may not be considered executable at the reporting date and may have been adjusted for liquidity concerns. For those instruments where liquidity adjustments have been made to the exchange price, such as long-dated option contracts, the instrument has been included in Level 2 of the fair value hierarchy.

The fair values of OTC derivatives are determined on the basis of either industry standard models or internally developed proprietary models. Both model types use various observable and unobservable inputs in order to determine fair value. The inputs include those characteristics of the derivative that have a bearing on the economics of the instrument.

The determination of the fair value of many derivatives involves only a limited degree of subjectivity because the required inputs are observable in the marketplace, while more complex derivatives may use unobservable inputs that rely on specific proprietary modelling assumptions. Examples of such specific unobservable inputs include long-dated volatility assumptions on OTC option transactions and recovery rate assumptions for credit derivative transactions.

Where observable inputs (prices from exchanges, dealers, brokers or market consensus data providers) are not available attempts are made to infer values from observable prices through model calibration (spot and forward rates, benchmark interest rate curves and volatility inputs for commonly traded option products). For inputs that cannot be derived from other sources, estimates from historical data may be made.

OTC derivatives where the majority of the value is derived from market observable inputs are categorised as Level 2 instruments, while those where the majority of value is derived from unobservable inputs are categorised as Level 3.

### Interest rate derivatives

OTC vanilla interest rate products such as interest rate swaps, swaptions and caps and floors are valued by discounting the anticipated future cash flows. The future cash flows and discounting are derived from market standard yield curves and industry standard volatility inputs. Where applicable, exchange-traded prices are also used to value exchange traded futures and options and can be used in yield curve construction.

For more complex products inputs include, but are not limited to, basis swap spreads, constant maturity convexity adjustments, constant maturity treasury spreads, inflation index correlations, inflation seasonality, single and quanto interest rate correlations, cross asset correlations, mean reversion, serial correlation and conditional prepayment rate assumptions.

### Foreign exchange derivatives

Foreign exchange derivatives include vanilla products such as spot, forward and option contracts where the anticipated discounted future cash flows are determined from foreign exchange forward curves and industry standard optionality modelling techniques. Where applicable, exchange traded prices are also used for futures and option prices. For more complex products inputs include, but are not limited to, foreign exchange rate correlations, quanto cross asset correlations and volatility skew assumptions.

### Equity derivatives

Equity derivatives include vanilla options and swaps in addition to different types of exotic options. Inputs for equity derivatives can include borrowing costs, dividend curves, equity to equity correlations, equity to foreign exchange rate correlations, single name and index volatility, fund gap risk, fund volatility, interest rate to equity correlation and yield curve.

### Credit derivatives

Credit derivatives include index and single name CDSs in addition to more complex structured credit products. Vanilla products are valued using industry standard models and inputs that are generally market observable including credit spreads and recovery rates.

Complex structured credit derivatives are valued using proprietary models requiring inputs such as credit spreads, recovery rates, credit volatilities, default correlations, cash/synthetic basis spreads and prepayment rates. These input parameters are generally implied from available market observable data.

## Loans

The CSi group's loan portfolio measured at fair value includes commercial loans, residential loans, corporate loans, leveraged financed loans and emerging market loans. Fair value is based on recent transactions and quoted prices, where available. Where recent transactions and quoted prices are not available, fair value may be determined by relative value benchmarking (which includes pricing based upon another position in the same capital structure, other comparable loan issues, generic industry credit spreads, implied credit spreads derived from CDS for the specific borrower, and enterprise valuations) or calculated based on the exit price of the collateral, based on current market conditions. Both the funded and unfunded portion of revolving credit lines, on the corporate lending portfolio, are valued using a CDS pricing model, which requires estimates of significant inputs including credit spreads, recovery rates, credit conversion factors, and weighted average life of the loan. The CSi group's other assets and liabilities include mortgage loans held in conjunction with securitisation activities and assets and liabilities of SPEs and mortgage securitisations that do not meet the criteria for sale treatment under IFRS. The fair value of mortgage loans held in conjunction with securitisation activities is determined on a whole-loan basis. Whole loan valuations are calculated based on the exit price reflecting the current market conditions. The fair value of assets and liabilities of SPEs and mortgage securitisations that do not meet the criteria for sale treatment under IFRS is determined based on the quoted prices for securitised bonds, where available, or on cash flow analyses for securitised bonds, when quoted prices are not available. All loans are classified as Level 2 and 3.

## Short-term borrowings and long-term debt

The CSi group's short-term borrowings and long-term debt include structured notes (hybrid financial instruments that are both bifurcatable and non-bifurcatable) and vanilla debt. The fair value of structured notes is based on quoted prices, where available. When quoted prices are not available, fair value is determined by using a discounted cash flow model incorporating the CSi group's credit spreads, the value of derivatives embedded in the debt and the residual term of the issuance based on call options. Derivatives structured into the issued debt are valued consistently with the firms' stand-alone derivatives as discussed above. The fair value of structured debt is heavily influenced by the combined call options and performance of the underlying derivative returns. Vanilla debt is fair valued to the new issue market using risk-free yield curves for similar maturities and the CSi group's own credit spread. The majority of short term borrowings are categorised as Level 2. The majority of long-term debt is categorised as Levels 2 and 3.

### Financial assets and liabilities by categories

Financial instruments are measured on an ongoing basis either at fair value or at amortised cost. The following table sets out the carrying amounts and fair values of the CSi group's financial instruments.

| Group 2012 | | Carrying value | | | |
|---|---|---|---|---|---|
| | Fair Value | Held for trading | Designated at fair value | Other loans and receivables | Total |
| **Financial Assets (USD million)** | | | | | |
| Cash and due from banks | 18,690 | - | - | 18,690 | 18,690 |
| Interest-bearing deposits with banks | 2,525 | - | - | 2,525 | 2,525 |
| Securities purchased under resale agreements and securities borrowing transactions | 24,103 | - | - | 24,103 | 24,103 |
| Trading financial assets at fair value through profit or loss | 557,333 | 557,333 | - | - | 557,333 |
| Financial assets designated at fair value through profit or loss | 20,128 | - | 20,128 | - | 20,128 |

| **Total assets at fair value** | **21,037** | **1,802** | **(6,234)** | **4,845** | **(5,088)** | **3,102** | **(6,248)** | **69** | **3** | **-** | **-** | **13,288** |
| **Liabilities at fair value (USD million)** | | | | | | | | | | | | |
| Trading financial liabilities at fair value through profit or loss | 8,636 | 1,460 | (2,490) | 25 | (280) | 818 | (3,350) | 66 | 1,043 | - | - | 5,928 |
| Financial liabilities designated at fair value through profit or loss | 6,866 | 245 | (847) | 44 | (192) | 1,882 | (3,328) | (33) | 637 | - | - | 5,274 |
| **Total liabilities at fair value** | **15,502** | **1,705** | **(3,337)** | **69** | **(472)** | **2,700** | **(6,678)** | **33** | **1,680** | **-** | **-** | **11,202** |
| **Net assets/liabilities at fair value** | **5,535** | **97** | **(2,897)** | **4,776** | **(4,616)** | **402** | **430** | **36** | **(1,677)** | **-** | **-** | **2,086** |

[1] For all transfers to Level 3 or out of Level 3, the CSi group determines and discloses as Level 3 events only gains or losses through the last day of the reporting period.

## Assets and liabilities measured at fair value on a recurring basis for Level 3

| As at December 2011 | | | | | | | | Trading revenues | | Other revenues | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Bank | Balance at beginning of period | Transfers in | Transfers out | Purchases | Sales | Issuances | Settlement | On transfers in[1]/out | On all others | On transfers in / out | On all others | Balance at end of period |
| **Assets at fair value (USD million)** | | | | | | | | | | | | |
| Trading financial assets at fair value through profit or loss | 14,797 | 3,535 | (2,956) | 6,587 | (5,748) | 503 | (3,178) | 112 | 2,255 | - | - | 15,907 |
| Financial assets designated at fair value through profit or loss | 5,591 | 1,005 | (950) | 1,770 | (1,355) | 1,608 | (2,049) | 18 | (508) | - | - | 5,130 |
| **Total assets at fair value** | **20,388** | **4,540** | **(3,906)** | **8,357** | **(7,103)** | **2,111** | **(5,227)** | **130** | **1,747** | **-** | **-** | **21,037** |
| **Liabilities at fair value (USD million)** | | | | | | | | | | | | |
| Trading financial liabilities at fair value through profit or loss | 11,062 | 1,589 | (2,586) | 40 | 117 | 65 | (2,267) | 205 | 411 | - | - | 8,636 |
| Financial liabilities designated at fair value through profit or loss | 8,940 | 645 | (1,139) | 429 | (1,091) | 3,166 | (4,331) | 5 | 242 | - | - | 6,866 |
| **Total liabilities at fair value** | **20,002** | **2,234** | **(3,725)** | **469** | **(974)** | **3,231** | **(6,598)** | **210** | **653** | **-** | **-** | **15,502** |
| **Net assets/liabilities at fair value** | **386** | **2,306** | **(181)** | **7,888** | **(6,129)** | **(1,120)** | **1,371** | **(80)** | **1,094** | **-** | **-** | **5,535** |

[1] Transfers in are effected at the end of the period, and no revenues are recognised in the above table for the period prior to the transfer. This has been implemented at the start of 2010.

### Gains and losses on assets and liabilities measured at fair value on a recurring basis using significant unobservable inputs (Level 3)

| **As at 31 December 2012** | **Trading revenues** | **Other revenues** | **Total revenues** |
|---|---|---|---|
| **Group (USD million)** | | | |
| Net realised/unrealised gains/(losses) included in net revenues | (1,642) | - | (1,642) |
| Whereof: | | | |
| Changes in unrealised gains or losses relating to assets and liabilities still held as of the reporting date | (1,175) | - | (1,175) |

| **As at 31 December 2011** | **Trading revenues** | **Other revenues** | **Total revenues** |
|---|---|---|---|
| **Group (USD million)** | | | |
| Net realised/unrealised gains/(losses) included in net revenues | 494 | - | 494 |
| Whereof: | | | |
| Changes in unrealised gains or losses relating to assets and liabilities still held as of the reporting date | (186) | - | (186) |

| **As at 31 December 2012** | **Trading revenues** | **Other revenues** | **Total revenues** |
|---|---|---|---|
| **Bank (USD million)** | | | |
| Net realised/unrealised gains/(losses) included in net revenues | (1,642) | - | (1,642) |
| Whereof: | | | |
| Changes in unrealised gains or losses relating to assets and liabilities still held as of the reporting date | (1,175) | - | (1,175) |

| **As at 31 December 2011** | **Trading revenues** | **Other revenues** | **Total revenues** |
|---|---|---|---|
| **Bank (USD million)** | | | |
| Net realised/unrealised gains/(losses) included in net revenues | 1,014 | - | 1,014 |
| Whereof: | | | |
| Changes in unrealised gains or losses relating to assets and liabilities still held as of the reporting date | (186) | - | (186) |

Both observable and unobservable inputs may be used to determine the fair value of positions that have been classified within Level 3. As a result, the unrealised gains and losses from assets and liabilities within Level 3 presented in the table above may include changes in fair value that were attributable to both observable and unobservable inputs.

The CSi group employs various economic hedging techniques in order to manage risks, including risks in Level 3 positions. Such techniques may include the purchase or sale of financial instruments that are classified in Levels 1 and/or 2. The realised and unrealised gains and losses for assets and liabilities in Level 3 presented in the table above do not reflect the related realised or unrealised gains and losses arising on economic hedging instruments classified in Levels 1 and/or 2.

### Transfers in and out of Level 3

Transfers into Level 3 assets and Level 3 liabilities during 2012 of USD 1,802 million and USD 1,705 million respectively were primarily from derivatives, trading securities and loans. The transfers were related to trading and SPE consolidated positions within Leveraged Finance Trading, Non Agency RMBS, Structured Rates-Europe, Structured Credit and Prime Financing (Delta1) businesses primarily due to decreased observability and availability of pricing data.

Transfers out of Level 3 assets and Level 3 liabilities during 2012 of USD 6,234 million and USD 3,337 million were primarily from trading securities, derivatives and loans. The transfers were related to trading and SPE consolidated positions in Inflations Europe, Leveraged Finance Trading, Non-Agency RMBS, Structured Derivatives, Structured Rates-Europe, Credit Trading-Asia businesses primarily due to improved observability and availability of pricing data.

### Sensitivity of fair values to reasonably possible alternative assumptions

The fair value of certain financial instruments is dependent in part or fully upon unobservable parameters which may include market inputs, prices or other data. The following table summarises the sensitivity of these financial instruments to reasonable changes in the assumptions underlying these parameters:

| **Group** | **As at 31 December 2012** | | **As at 31 December 2011** | |
|---|---|---|---|---|
| | **Favourable changes** | **Unfavourable changes** | **Favourable changes** | **Unfavourable changes** |
| **Impact on net income/(loss) (USD million)** | | | | |
| Derivative assets and liabilities | 381 | (452) | 386 | (463) |
| Asset backed securities, loans and derivatives | 121 | (112) | 233 | (84) |
| Debt and equity securities | 99 | (69) | 135 | (103) |
| Loans | 71 | (76) | 88 | (91) |
| **Balance at the end of the period** | **672** | **(709)** | **842** | **(741)** |

When the fair value of an instrument has multiple unobservable inputs, there is assumed to be no correlation between those inputs, as such the total sensitivity reflected in the table may be larger than if correlation had been included in the analysis. The analysis also ignores any correlation between the different categories of financial instruments listed in the table.

Derivative assets and liabilities include primarily equity, credit and interest rate derivatives. The primary parameters subjected to sensitivity analysis included correlations, volatilities and credit spreads. Correlation sensitivities for equity and interest rate positions were subjected to equal movements upward and downward. The movements varied by product and existing levels of correlation based upon management judgement. Volatility sensitivities are predominantly equity volatilities and are generally subjected to a 5% to 10% movement upward and downward. Credit spread sensitivities were subjected to generally equal movements upward and downward based upon management judgement and underlying market conditions.

Asset backed securities, loans and derivatives include CMBS, RMBS, ABS CDO and balance guaranteed swap positions. CMBS sensitivities are calculated by subjecting the recovery value on the underlying assets to a 5% movement upward and downward. The impact on the value of the underlying assets is an upward or downward movement greater than 10%. ABS CDO positions were subjected to sensitivities to underlying asset prices, as well as recovery rates on the underlying assets. The underlying asset prices were subjected to a range of downward movements with no movement upward. Recovery rates are held at what management believes to be conservative levels and were increased by 10% resulting in favorable uncertainty. RMBS positions were subjected to sensitivities on prepayment speeds which were estimated as one standard deviation of historical prepayments movement upward and downward. Balance guaranteed swap positions were subjected to sensitivities on prepayment speeds which were estimated based on management's assessment of fast/slow notional bands for movements upward and downward.

Debt and equity securities include equity fund linked products, variable funding notes and corporate and emerging market bonds. The primary parameters subjected to sensitivity analysis for equity fund linked products and variable funding notes include gap risk and secondary market reserves. Gap risk sensitivity is estimated by using limited pricing service information and valuing to the conservative side of the range of values. The parameter subjected to sensitivity for emerging market positions is price. Price sensitivity is subjected to a 100 basis point movement upward and downward. The parameter subjected to sensitivity for corporate debt is credit spreads and are generally subjected to a 15% movement upward and downward.

Loans include emerging market loans and corporate loans. For emerging market loans the parameter subjected to sensitivity analysis is credit spreads which is subjected to a 15% movement upward and downward. For corporate loans the parameter subjected to sensitivity analysis is the loan price which is subjected to an equal movement upward and downward which ranges from 5 to 10 points depending upon the position.

### Recognition of trade date profit

If there are significant unobservable inputs used in the valuation technique, the financial instrument is recognised at the transaction price and any profit implied from the valuation technique at trade date is deferred over the life of the contract or the fair value is expected to become observable. When inputs to the valuation model becomes observable or the CSi group enters into offsetting transactions that substantially eliminate the instrument's risk.

The following table sets out the aggregate difference yet to be recognised in profit or loss at the beginning and end of year with a reconciliation of the changes of the balance during the year for trading assets and liabilities:

| Group and Bank | 2012 | 2011 |
|---|---|---|
| **Deferred trade date profit (USD million)** | | |
| Balance at the beginning of period | 433 | 475 |
| Increase due to new trades | 175 | 265 |
| Reduction due to passage of time | (37) | (34) |
| Reduction due to redemption, sales, transfers or improved observability | (177) | (273) |
| **Balance at the end of period** | **394** | **433** |

### Transfers between Level 1 and Level 2

The table below shows the transfers from Level 1 to Level 2 of the fair value hierarchy.

| Group and Bank | 2012 | 2011 |
|---|---|---|
| **Assets (USD million)** | | |
| Trading financial assets at fair value through profit or loss | 276 | 399 |
| **Total transfers in assets at fair value** | **276** | **399** |
| | | |
| **Liabilities (USD million)** | | |
| Trading financial liabilities at fair value through profit or loss | 8 | - |
| **Total transfers in liabilities at fair value** | **8** | **-** |

The transfers from Level 1 to Level 2 were mainly driven by trading securities where the liquidity had decreased and subsequently lacked pricing transparency.

The table below shows the transfers from Level 2 to Level 1 of the fair value hierarchy.

| Group and Bank | 2012 | 2011 |
|---|---|---|
| **Assets (USD million)** | | |
| Trading financial assets at fair value through profit or loss | 4,967 | 6,898 |
| **Total transfers in assets at fair value** | **4,967** | **6,898** |
| | | |
| **Liabilities (USD million)** | | |
| Trading financial liabilities at fair value through profit or loss | 5,128 | 5,773 |
| **Total transfers in liabilities at fair value** | **5,128** | **5,773** |

The transfers from Level 2 to Level 1 are mainly driven by transfer of exchange traded options as they moved closer to maturity and pricing inputs become more observable.

## 37. Assets Pledged or Assigned

The following table sets forth details of assets pledged or assigned:

| Group and Bank | 2012 | 2011 |
|---|---|---|
| | | |
| **Assets pledged or assigned (USD million)** | | |
| Trading financial assets at fair value through profit or loss | 33,761 | 35,540 |
| | | |
| **Collateral received (USD million)** | | |
| Fair value of collateral received with the right to resell or repledge | 40,251 | 49,230 |
| ■ Of which sold or repledged | 26,381 | 33,860 |

Assets pledged or assigned represents the balance sheet position of trading assets at fair value through profit or loss which have been pledged as collateral under securities sold under repurchase agreements, securities lending transactions and derivatives transactions. Refer to Note 15 – Trading Financial Assets and Liabilities at Fair Value Through Profit or Loss for the amount of securities transferred which are encumbered.

As at 31 December 2012 and 2011, collateral was received in connection with resale agreements, securities borrowings and loans, derivative transactions and margined broker loans. As at these dates, a substantial portion of the collateral received by the CSi group had been sold or repledged in connection with repurchase agreements, securities sold not yet purchased, securities lent, pledges to clearing organisations, segregation requirements under securities laws and regulations, derivative transactions and bank loans.

These transactions were generally conducted under terms that are usual and customary for standard securitised lending activities and the other transactions described. The CSi group, as the secured party, has the right to sell or repledge such collateral, subject to the CSi group returning equivalent securities upon completion of the transaction.

The CSi group enters into agreements with counterparties where collateral or security interests in positions, which the CSi group holds, has been provided. This includes situations where the CSi group has registered charges to certain counterparties over the CSi groups assets in connection with its normal operating activities.

## 38. Derecognition

In the normal course of business, the CSi group enters into transactions in which it transfers previously recognised financial assets, such as debt securities, equity securities and other financial instruments. The CSi group's accounting policy regarding derecognition of such assets under IAS 39 is described in Note 2 – Significant Accounting Policies.

### Transferred Financial Assets that are derecognised with continuing involvement

Where the transfer of a financial asset meets the derecognition criteria under IAS 39, the CSi group may have continuing involvement in a financial asset that has been derecognised. The continuing involvement can take several forms, including but not limited to derivative instruments and debt instruments issued by SPEs to which the asset has been transferred. In addition, the CSi group does not have a continuing involvement in a transferred financial asset if, as part of the transfer, the CSi group neither retains any of the contractual rights or obligations inherent in the transferred financial asset nor acquires any new contractual rights or obligations relating to the transferred financial asset. The CSi group does not have continuing involvement in a transferred financial asset if it has neither an interest in the future performance of the transferred financial asset nor a responsibility under any circumstances to make payments in respect of the transferred financial asset in the future. The CSi group's exposure resulting from continuing involvement in a transferred asset is generally limited to where the CSi group retains any form of rights or obligations relating to the transferred asset.

The table below provides information for the transfer of financial assets that qualify for sale accounting and subsequent derecognition, in which the CSi group still has continuing involvement as at 31 December 2012, irrespective of the date when the transfer occurred. The maximum exposure to loss from continuing involvement represents the maximum exposure before taking into account the amount of any collateral held against the continuing involvement.

## Information on transferred assets by type of continuing involvement

| Group and Bank (USD million) | Carrying amount of continuing involvement in statement of financial position | | Fair value of continuing involvement | | Maximum exposure to loss | Loss from transfer | Expense from continuing involvement (year-to-date) | Income from continuing involvement (life-to-date) |
|---|---|---|---|---|---|---|---|---|
| | Trading financial assets at fair value through profit or loss | Trading financial liabilities at fair value through profit or loss | Assets | Liabilities | | | | |
| **Type of continuing involvement** | | | | | | | | |
| Derivatives | | | | | | | | |
| ■ Swaps | 213 | (24) | 213 | (24) | 213 | (38) | (76) | 154 |
| Notes | 122 | - | 122 | - | 122 | - | -[1] | 19 |

The table above includes continuing involvement in the form of derivative transactions. To reduce its credit risk to derivatives, the CSi group enters into legally enforceable netting agreements with its derivative counterparties. Collateral on these derivative contracts is usually posted on a net counterparty basis. Also included in the table are notes, that represent the CSi group's continuing involvement in the transferred asset which are fully collateralised.

Proceeds from transfer activity in the reporting period (where the asset has been derecognised in its entirety and there is continuing involvement) were distributed evenly across the reporting period.

The following table shows a maturity analysis of undiscounted cash outflows that the CSi group may be required to pay to repurchase the asset. The below table includes situations where the CSi group has an option to repurchase the asset. In such instances, where the timing of the cash flows is not specified, the total undiscounted amount has been included in the earliest maturity bucket in the disclosure below.

[1] The expenses from involvement (year-to-date) for Notes is USD 6,951 but shown as Nil as the statement is presented in USD million.

### Maturity analysis of undiscounted cash flows to repurchase transferred assets by type of continuing involvement

| Group and Bank (USD million) | Total | On demand | Less than 1year | 1 – 5 years | More than 5 years |
|---|---|---|---|---|---|
| **Type of continuing involvement** | | | | | |
| Derivatives[1] | | | | | |
| ■ Swaps | (1,179) | (1,179) | - | - | - |

Instruments that are considered to be continuing involvement are included in Note – 15 Trading Financial Assets and Liabilities at Fair Value Through Profit and Loss.

### Transferred Financial Assets that are not derecognised in their entirety

Certain transactions may include provisions that prevent derecognition of the transferred financial asset and the transfers are accounted for as secured financing transactions. Repurchase agreements, securities lending agreements and total return swaps, in which the CSi group retains substantially all of the associated credit, market, interest rate and foreign exchange risks and rewards associated with the assets, represent the most common examples of such transactions. Where the transfer of an asset does not meet derecognition, it remains on the CSi groups balance sheet with a corresponding liability established to represent an obligation to the counterparty. As part of the CSi group's repurchase agreements and securities lending transactions, there is an obligation to return equivalent securities at the end of the transaction.

The following table provides details of financial assets which have been sold or otherwise transferred, but which do not qualify for derecognition, together with their associated liabilities.

[1] The derivative provides CSi group the right but not the obligation to repurchase the transferred asset at the CSi group's option.

## Carrying amount of transferred assets not derecognised and associated liabilities

| 2012 | Financial assets not derecognised due to the following transactions | | | |
|---|---|---|---|---|
| Group and Bank (USD million) | Repurchase agreements | Securities lending agreements | Total return swaps | Other |
| Carrying amount of transferred assets | 13,958 | 2,733 | 1,681 | 519 |
| Total carrying amount of associated liabilities | 13,936 | 2,652 | 1,610 | 519 |

Where the CSi group sells the contractual rights to the cash flows of the securities included above, it does not have the ability to use the transferred assets during the term of the arrangement.

## Carrying amount of transferred assets not derecognised and associated liabilities

| 2011 | Financial assets not derecognised due to the following transactions | | | |
|---|---|---|---|---|
| Group and Bank (USD million) | Repurchase agreements | Securities lending agreements | Total return swaps | Other |
| Carrying amount of transferred assets | 9,839 | 7,090 | 686 | 472 |
| Total carrying amount of associated liabilities | 9,853 | 7,090 | 686 | 472 |

Assets not derecognised are included in Note – 15 Trading Financial Assets and Liabilities at Fair Value Through Profit or Loss and Note – 17 Other Loans and Receivables. The corresponding liabilities are included in Note – 14 Securities Borrowed, Lent and Subject to Resale or Repurchase Agreements, Note – 16 Financial Assets and Liabilities Designated at Fair Value Through Profit or Loss and Note – 19 Other Assets and Liabilities.

## 39. Financial Instruments Risk Position

### Risks Detail

### i) Market risk

#### Overview

Market risk is the risk of loss arising from adverse changes in interest rates, foreign currency exchange rates, equity prices, commodity prices and other relevant parameters, such as market volatility. The Bank defines its market risk as potential changes in the fair values of financial instruments in response to market movements. A typical transaction may be exposed to a number of different market risks.

The Bank has policies and processes in place to ensure that market risk is captured, accurately modelled and reported, and effectively managed. Trading and non-trading portfolios are managed at various organisational levels, from the overall risk positions at the Bank level down to specific portfolios. The Bank uses market risk measurement and management methods in line with industry standards. These include general tools capable of calculating comparable exposures across the Bank's many activities and focused tools that can specifically model unique characteristics of certain instruments or portfolios. The tools are used for internal market risk management, internal market risk reporting and external disclosure purposes. The principal measurement methodologies are value-at-risk ('VaR') and scenario analysis. Additionally, the Bank's market risk exposures are reflected in the economic capital calculations. The risk management techniques and policies are regularly reviewed to ensure they remain appropriate.

#### Value-at-Risk

VaR measures the potential loss in terms of fair value of financial instruments due to adverse market movements over a defined time horizon at a specified confidence level. VaR as a concept is applicable for all financial risk types with valid regular price histories. Positions are aggregated by risk type rather than by product. For example, interest rate risk includes risk arising from money market and swap transactions, bonds, and interest rate, foreign exchange, equity and commodity options. The use of VaR allows the comparison of risk in different businesses, such as fixed income and equity, and also provides a means of aggregating and netting a variety of positions within a portfolio to reflect actual correlations and offsets between different assets.

Historical financial market rates, prices and volatility serve as a basis for the statistical VaR model underlying the potential loss estimation. The Bank uses a ten-day holding period and a confidence level of 99% to model the risk in its trading portfolios. These assumptions are compliant with the standards published by the Basel Committee on Banking Supervision ('BCBS') and other related international standards for market risk management. For some purposes, such as backtesting and benchmarking with competitors, the resulting VaR figures are scaled down or calculated to a one-day holding period level. A one-day holding period and a 99% confidence level mean that, within a one-day horizon, losses exceeding the VaR figure should occur, on average under normal market conditions, not more than once every hundred days.

The Bank uses a historical simulation model for the majority of risk types and businesses within its trading portfolios. Where insufficient data is available for such an approach, an 'extreme-move' methodology is used. The model is based on the profit or loss distribution resulting from historical changes in market rates, prices and volatility applied to evaluate the portfolio. This methodology also avoids any explicit assumptions on correlation between risk factors. The Bank uses a three-year historical dataset to compute VaR. To ensure that VaR responds appropriately in times of market stress, the Bank uses a scaling technique that automatically increases VaR where the short-term market volatility is higher than the long-term volatility in the three year dataset. This results in a more responsive VaR model, as the impact of changes in overall market volatility is reflected almost immediately in the VaR model.

The Bank has approval from the FSA to use its regulatory VaR model in the calculation of trading book market risk capital requirements, and the model is subject to regular reviews by the regulator.

The VaR model uses assumptions and estimates that the Bank believes are reasonable, but changes to assumptions or estimates could result in a different VaR measure. As a risk measure, VaR only quantifies the potential loss on a portfolio under normal market conditions. Other risk measures, such as scenario analysis, are used to estimate losses associated with unusually severe market movements. The main assumptions and limitations of VaR as a risk measure are:

- VaR relies on historical data to estimate future changes in market conditions, which may not capture all potential future outcomes, particularly where there are significant changes in market conditions, such as increases in volatilities.
- Although VaR captures the interrelationships between risk factors, these interrelationships may break down during stressed market conditions.
- VaR provides an estimate of losses at a 99% confidence level, which means that it does provide any information on the size of losses that could occur beyond that confidence threshold.
- VaR is based on either a ten-day (for internal risk management and regulatory purposes) or one-day (for backtesting purposes) holding period. This assumes that risks can be either sold or hedged over that period, which may not be possible for all types of exposure, particularly during periods of market illiquidity or turbulence.
- VaR is calculated using positions held at the end of each business day and does not include intra-day exposures.

### Scenario analysis

Stress testing complements other risk measures by capturing the Bank's exposure to unlikely but plausible events, which can be expressed through a range of significant moves across multiple financial markets. The majority of scenario analysis calculations performed are specifically tailored toward the risk profile within particular businesses, and limits may be established if they are considered the most appropriate control. In addition, to identify areas of risk concentration and potential vulnerability to stress events at Bank level, a set of scenarios are used which are consistently applied across all businesses and assess the impact of significant, simultaneous movements across a broad range of markets and asset classes.

Stress testing is a fundamental element of the Bank's risk control framework, stress testing results are used in risk appetite discussions and strategic business planning, and support the Bank's internal capital adequacy assessment. Stress test scenarios are conducted on a regular basis and the results, trend information and supporting analysis are reported to the Board, senior management and the business lines.

The Bank's stress testing framework is governed through a dedicated steering committee that operates across CS group. Scenarios can be defined with reference to historic events or based on forward looking, hypothetical events that could impact the Bank's positions, capital, or profitability. The scenarios are reviewed and updated regularly as markets and business strategies evolve, and new scenarios are designed by the Risk division in collaboration with Global Research and the business divisions.

## Trading portfolios

### Risk measurement and management

Market risk arises in CSi's trading portfolios primarily through the trading activities of the Investment Banking business lines.

For the purposes of this disclosure, VaR is used to quantify market risk in the trading portfolio, which includes those financial instruments treated as part of the trading book for the Bank's regulatory capital purposes. This classification of assets as trading is done for the purpose of analysing the Bank's market risk exposure, not for financial statement purposes.

CSi is active in most of the principal trading markets of the world, using the majority of common trading and hedging products, including derivatives such as swaps, futures, options and structured products (some of which are customised transactions using combinations of derivatives and executed to meet specific client or proprietary needs). As a result of CSi's broad participation in products and markets, trading strategies are correspondingly diverse and exposures are generally spread across a range of risk factors and locations.

### Development of trading portfolio risks

The table below shows the trading related market risk exposure for the Bank, as measured by ten-day 99% VaR. The VaR in the table has been calculated using a three-year historical dataset. VaR estimates are computed separately for each risk type and for the whole portfolio using the historical simulation methodology. The diversification benefit reflects the net difference between the sum of the 99th percentile loss for each individual risk type and for the total portfolio. There is no material difference in VaR between the Bank and the CSi group.

### Ten-day, 99% VaR – trading portfolios

| End of period | Interest rate and credit spread | Foreign exchange | Commodity | Equity | Diversification benefit[1)] | Total |
|---|---|---|---|---|---|---|
| **2012 USD million** | | | | | | |
| Average | 101 | 23 | 11 | 34 | (77) | 92 |
| Minimum | 75 | 5 | 2 | 19 | | 46 |
| Maximum | 139 | 70 | 29 | 83 | | 150 |
| End of period | 97 | 15 | 10 | 40 | (93) | 69 |
| **2011 USD million** | | | | | | |
| Average | 232 | 52 | 38 | 59 | -194 | 187 |
| Minimum | 135 | 17 | 9 | 16 | [2)] | 102 |
| Maximum | 348 | 466 | 102 | 262 | [2)] | 364 |
| End of period | 138 | 70 | 10 | 46 | -115 | 149 |

1) VaR estimates are calculated separately for each risk type and for the whole portfolio using the historical simulation methodology. Diversification benefit reflects the net difference between the sum of the 99% percentile loss.

2) As the minimum and maximum occur on different days for different risk types, it is not meaningful to calculate a portfolio diversification benefit.

### VaR results

The CSi group's ten-day, 99% regulatory VaR as of 31 December 2012 decreased by 54% to USD 69 million, compared to 31 December 2011 (USD 149 million).

## Banking portfolios

### Risk measurement and management

The market risks associated with the non-trading portfolios are measured, monitored and limited using several tools, including EC, scenario analysis, sensitivity analysis and VaR. For the purpose of this disclosure, the aggregated market risks associated with the Bank's non-trading portfolios are measured using sensitivity analysis. The sensitivity analysis for the non-trading activities measures the amount of potential change in economic value resulting from specified hypothetical shocks to market factors. It is not a measure of the potential impact on reported earnings in the current period, since the non-trading activities generally are not marked to market through earnings. Foreign exchange translation risk is not included in this analysis.

### Development of non-trading portfolio risks

Foreign exchange risk related to expenses and net assets is centrally and systematically managed with a focus on risk reduction and diversification. Risk is monitored and managed at the CSi group level through the levelling of accrued profit or losses which are incurred in a currency other than the CSi group's presentation currency. Any non-presentation currency denominated profit or loss of the CSi group is systematically leveled against the CSi group's presentation currency during or immediately after the month so that foreign exchange risks on accrued profit or loss are fully eliminated at month-end.

The CSi group has approval to manage its own trading profit or loss related foreign exchange risk through a formal trading mandate and has established defined risk limits.

Interest rate risk on banking book positions is shown below using sensitivity analysis that estimates the potential change in value resulting from defined changes in interest rate yield curves. The impact of a one-basis-point parallel move in yield curves on the fair value of interest rate-sensitive non-trading book positions would be USD 2 million as of 31 December 2012 compared to USD 3 million as of 31 December 2011. Non-trading interest rate risk is assessed using other measures including the potential value change resulting from a significant change in yield curves. As of 31 December 2012, the fair value impacts of 200-basis-point move in yield curves (flooring at zero where appropriate) were:

+200bps increase of USD 549 million (2011: increase of USD 443 million)

-200bps decrease of USD 14 million (2011: decrease of USD 335 million)

The fair value impact of a statistical one-year adverse interest rate move (to 99% confidence level) was a decrease of USD 164 million. Both measures are significantly below the 20% threshold used by regulators to identify firms that potentially run excessive levels of non-trading interest rate risk.

Equity risk on non-trading positions is measured using sensitivity analysis that estimates the potential change in value resulting from a 10% decline in the equity markets of developed nations and a 20% decline in the equity markets of emerging market nations. The estimated impact of this scenario would have been a decrease of approximately USD 15 million in the value of the non-trading portfolio as of 31 December 2012 and USD 12 million as of 31 December 2011.

Commodity risk on non-trading positions is measured using sensitivity analysis that estimates the potential change in value resulting from a 20% weakening in commodity prices. The estimated impact of this scenario would have been a decrease of approximately USD Nil in the value of the non-trading portfolio as of 31 December 2012 compared to USD 4 million as of 31 December 2011.

### ii) Liquidity Risk

Liquidity risk is the risk that a company is unable to fund assets and meet obligations as they fall due under both normal and stressed market conditions.

Liquidity, as with funding, capital and foreign exchange exposures, is centrally managed by Treasury. Oversight of these activities is provided by the Capital Allocation and Risk Management Committee (CARMC), a committee that includes the Chief Executive Officers (CEOs) of the CS group and the divisions, the Chief Financial Officer (CFO), the Chief Risk Officer (CRO) and Treasurer.

The liquidity and funding strategy is approved by CARMC with ultimate responsibility residing with the Board of Directors. The implementation and execution of the funding and liquidity strategy is managed by Treasury for adherence to the funding policy and the efficient coordination of the secured funding desks. The liquidity and funding profile is regularly reported to CARMC and the Board of Directors, who define the Bank's risk tolerance and set parameters for the balance sheet usage of businesses.

#### CS group-wide management of liquidity risk

The liquidity and funding profile of Credit Suisse AG ('CS') reflects the risk appetite, business activities, strategy, the markets and overall operating environment. CS' liquidity and funding policy is designed to ensure that funding is available to meet all obligations in times of stress, whether caused by market events and / or issues specific to CS. This approach enhances CS' ability to manage potential liquidity and funding risks and to promptly adjust the liquidity and funding levels to meet stress situation(s).

The funding sourced by CS is part of an Asset-Liability Management ('ALM') strategy aimed at maintaining a funding structure with long term stable funding sources being in excess of illiquid assets. CS primarily funds the balance sheet through core customer deposits, long-term debt and shareholders' equity.

To address short term liquidity needs a portfolio of highly liquid securities and cash is maintained. This liquidity buffer is managed to sustain operations for an extended period of time in the event of a crisis.

The targeted funding profile is designed to enable CS to continue to pursue activities for an extended period of time without changing business plans during times of stress. The principal measure used to monitor the structural liquidity position of the firm and as the basis for funds transfer pricing policy is Net Stable Funding Ratio (NSFR). This is complemented by CS's internal liquidity barometer, which allows CS to manage the time horizon over which the adjusted market value of unencumbered assets (including cash) exceeds the aggregate value of contractual outflows of unsecured liabilities plus a conservative forecast of anticipated contingent commitments. This framework is supplemented by the modelling of additional stress events and additional liquidity risk measurement tools.

In the event of a liquidity crisis, CS would activate its Contingency Funding Plan ('CFP'), which focuses on the specific actions that would be taken in the event of a crisis, including a detailed communication plan for creditors, investors and customers.

The contingency plan would be activated by the Funding Execution Committee ('FEC'), which includes senior business line, funding and finance department management adapted to include the relevant stakeholders depending upon the degree and nature of stress. This committee would meet frequently throughout the crisis to ensure that the plan is executed.

On regulatory developments, the BCBS issued the Basel III international framework for liquidity risk measurement, standards and monitoring. The framework includes a liquidity coverage ratio ('LCR') and a net stable funding ratio ('NSFR'). The BCBS has stated that it will review the effect of these liquidity standards on financial markets, credit extension and economic growth to address unintended consequences.

The LCR, which will be phased in beginning 1 January 2015 through 1 January 2019, following an observation period which began in 2011, addresses liquidity risk over a 30-day period. The LCR aims to ensure that banks have a stock of unencumbered high-quality liquid-assets available to meet liquidity needs for a 30-day time horizon under a severe stress scenario. The LCR is comprised of two components: the value of the stock of high quality liquid assets in stressed conditions and the total net cash outflows calculated according to specified scenario parameters. The ratio of liquid assets over net cash outflows is subject to an initial minimum requirement of 60%, which will increase by 10% for four years, reaching 100% by 1 January 2019.

The NSFR, which is expected to be introduced on 1 January 2018 following an observation period which began in 2012, establishes criteria for a minimum amount of stable funding based on the liquidity of a bank's assets and activities over a one-year horizon. The NSFR is intended to ensure banks maintain a structurally sound long-term funding profile beyond one year and is a complementary measure to the LCR. The standard is defined as the ratio of available stable funding over the amount of required stable funding and should always be at least 100%.

### Legal entity management of liquidity risk

The liquidity risk of CSi is managed as an integral part of the overall CS global liquidity risk management framework. CSi aims to achieve a prudent approach in the management of liquidity to ensure it can meet its obligations as they fall due. The core liquidity adequacy analysis used for CSi is aligned to those used globally for the CS barometer.

In the context of liquidity management at the legal entity, the Bank's Board is responsible for setting the liquidity risk appetite and liquidity risk tolerance limits. Some of the key characteristics determining CSi's liquidity risk management approach include, but are not limited to:

- Board approved legal entity risk tolerance.
- Funding of all illiquid assets on a long-term basis.
- Holding a liquid asset portfolio composed of highly liquid unencumbered assets.
- The liquidity value of assets, liabilities and the calibration of contingent liabilities being aligned with the CS global liquidity risk methodologies.

CSi has implemented a liquidity risk management framework including legal entity governance, systems and controls and frequent management information to measure, monitor and manage liquidity risk.

The UK IB ALM CARMC approves the liquidity risk tolerance and assumptions underlying the relevant stress tests on at least an annual basis.

The legal entity risk tolerance and assumptions underlying the relevant stress tests, which form part of CSi's liquidity risk management framework, are reviewed by Treasury and ultimately approved by the Bank's Board of Directors on at least an annual basis or as market conditions dictate.

Treasury is responsible for maintaining a CFP that details specific dealing strategies, actions and responsibilities required depending upon severity of the crisis. Treasury supports the plan with key liquidity tools, including early warning indicators. The CFP gives consideration to the impact of operational constraints in terms of time and ability to monetise assets, trapped liquidity, daylight collateral requirements and communicated strategies.

Incremental to CSi's unsecured funding sources from CS, CSi has the ability to access secured funding markets via repurchase agreements and a structured notes issuance programme. These funding streams provide diversification to the funding profile of the entity.

The following table sets out details of the remaining contractual maturity of all financial liabilities.

| Group<br>31 December 2012 | On Demand | Due within 3 months | Due between 3 and 12 months | Due between 1 and 5 years | Due after 5 years | Total |
|---|---|---|---|---|---|---|
| **Financial liabilities (USD million)** | | | | | | |
| Deposits | 1 | 604 | 2,263 | 671 | 1,305 | 4,844 |
| Securities sold under repurchase agreements and securities lending transactions | 1,176 | 1,007 | 2,691 | - | - | 4,874 |
| Trading financial liabilities at fair value through profit or loss | 525,737 | - | - | - | - | 525,737 |
| Financial liabilities designated at fair value through profit or loss | - | 9,655 | 6,356 | 14,444 | 6,189 | 36,644 |
| Short term borrowings | - | 112 | 29,606 | - | - | 29,718 |
| Long term debt | - | 8,289 | 4,481 | 13,389 | 4,767 | 30,926 |
| Perpetual debt | - | - | - | - | 1,525 | 1,525 |
| Other liabilities | 44,707 | 33 | - | 226 | - | 44,966 |
| **Total** | **571,621** | **19,700** | **45,397** | **28,730** | **13,786** | **679,234** |

| Group<br>31 December 2011 | On Demand | Due within 3 months | Due between 3 and 12 months | Due between 1 and 5 years | Due after 5 years | Total |
|---|---|---|---|---|---|---|
| **Financial liabilities (USD million)** | | | | | | |
| Deposits | 2,440 | 891 | 118 | 11 | 991 | 4,451 |
| Securities sold under repurchase agreements and securities lending transactions | 309 | 432 | 6,230 | - | - | 6,971 |
| Trading financial liabilities at fair value through profit or loss | 551,224 | - | - | - | - | 551,224 |
| Financial liabilities designated at fair value through profit or loss | 734 | 7,019 | 3,875 | 11,877 | 7,847 | 31,352 |
| Short term borrowings | - | 151 | 32,591 | - | - | 32,742 |
| Long term debt | - | 5,089 | 579 | 20,545 | 6,754 | 32,967 |
| Perpetual debt | - | - | - | - | 1,525 | 1,525 |
| Other liabilities | 42,572 | 67 | 3 | 167 | 26 | 42,835 |
| **Total** | **597,279** | **13,649** | **43,396** | **32,600** | **17,143** | **704,067** |

Liabilities in trading portfolios have not been analysed by contractual maturity because these liabilities are used to risk manage positions held across CS group and can be closed out at very short notice. Trading liabilities have been classified as being 'on demand' at their fair value.

For instruments with perpetual features (no maturity dates) the projected coupons have been excluded. Callable deposits, open ended positions and overnight funding will be recorded at their present value in an 'on demand' categorisation. This classification will be based on the underlying legal and contractual ability of the counterparty or CSi to put or call the positions at short notice.

### iii) Wrong-way Risk

#### Wrong-way exposures

Correlation risk arises when CSi enters into a financial transaction where market rates are correlated to the financial health of the counterparty. In a wrong-way trading situation, CSi's exposure to the counterparty increases while the counterparty's financial health and its ability to pay on the transaction diminishes. Capturing wrong-way risk requires the establishment of basic assumptions regarding correlations within a given trading product. CSi has multiple processes that allow the capture and estimate of wrong-way risk.

#### Credit approval and reviews

A primary responsibility of Credit Risk Management (CRM) is the approval of new counterparty trading relationships and the subsequent ongoing review of the creditworthiness of the client. Part of the review and approval process involves the consideration of the motivation of the client and the directional nature of the trading in which the client is engaged. Credit limits are sized to the level of comfort the CRM officer has with the strategy of the counterparty, the level of disclosure of financial information and the amount of risk mitigation that is present in the trading relationship (e.g. level of collateral).

#### Exposure adjusted risk calculation

Material trades that feature high correlation risk have higher risk weighting built into the exposure calculation process compared to 'rightway' trades.

- Purchased credit default swaps – Correlation exists where the counterparty and the underlying reference asset belong to the same group. In these cases, exposure is calculated assuming default and applying the recovery value of the underlying reference asset.
- Equity finance – If there is a high correlation between the counterparty and the underlying equity exposure is calculated as full notional (i.e. zero equity recovery).
- Reverse repurchase agreements – Correlation exists where the underlying issuer and the counterparty are affiliated. In these cases, collateral used as an offset in the exposure calculation process is lowered to its recovery value.

#### Wrong-way risk monitoring

Regular reporting of wrong-way risk at both the individual trade and portfolio level allows wrong-way risk to be monitored and corrective action taken by CRM in the case of heightened concern.

- Country exposure reporting – Exposure is reported against country limits established for emerging market countries. As part of the exposure reporting process, exposures that exhibit wrong-way characteristics are given a higher riskweighting versus non-correlated transactions. This weighting results in a greater amount of country limit usage for wrong-way transactions.
- Counterparty exposure reporting – Transactions that contain wrong-way risk (e.g. repurchase agreements, equity finance) are risk weighted as part of the daily exposure calculation process. Correlated transactions utilise more of the credit limit.
- Correlated repurchase and foreign exchange reports – Monthly reports produced by CRM capture correlated finance and foreign exchange positions for information and review by credit officers.
- Scenario risk reporting – In order to capture wrong-way risk at the industry level, a set of defined scenarios are run on the credit portfolio each month. The scenarios are determined by CRM and

involve stressing the underlying risk drivers to determine where portfolios are sensitive to these stressed parameters.

- Scenario risk reporting also covers client groups, particularly hedge funds, which are exposed to particular risk sensitivities and also may have collateral concentrations due to the direction and strategy of the fund.

**iv) Currency Risk**

The Bank takes on exposure to the effects of fluctuations in the prevailing foreign currency exchange rates on its financial position and cash flows.

The Bank has approval to manage its own trading P&L related FX risk through a formal trading mandate and has defined risk limits using the Value at Risk (VaR) methodology. Its currency exposure within the non-trading portfolios is managed through the CS group's leveling process as set out in the Corporate FX Policy. Both these methodologies are discussed in more detail in section i) of this note.

**v) Credit Risk**

Credit Risk Management is an independent function headed by the Chief Credit Officer with responsibility for approving credit limits, monitoring and managing individual exposures and assessing and managing the quality of the segment and business area's credit portfolios and allowances. CRM reports to the Chief Risk Officer of CS group.

### Definition of counterparty risk

Credit risk is the possibility of a loss being incurred by us as the result of a borrower or counterparty failing to meet its financial obligations or as a result of deterioration in the credit quality of the borrower or counterparty. In the event of a customer default a bank generally incurs a loss equal to the amount owed by the debtor, less any recoveries from foreclosure, liquidation of collateral or the restructuring of the debtor company. A change in the credit quality of counterparty has an impact on the valuation of assets eligible for fair value measurement, with valuation changes recorded in the Consolidated Statement of Income.

### Credit risk management approach

Effective credit risk management is a structured process to assess, quantify, measure, monitor and manage risk on a consistent basis. This requires careful consideration of proposed extensions of credit, the setting of specific limits, monitoring during the life of the exposure, active use of credit mitigation tools and a disciplined approach to recognising credit impairment.

The credit risk management framework covers all banking business areas that are exposed to credit risk. The framework is designed to cover virtually all of the credit exposures in the banking business and comprises seven core components:

- Individual counterparty rating systems;
- Transaction rating systems;
- A counterparty credit limit system;
- Country concentration limits;
- Risk-based pricing methodologies;
- Active credit portfolio management; and
- A credit risk provisioning methodology.

Credit limits are used to manage individual counterparty credit risk. A system of limits is also established to address concentration risk in the portfolio, including a set of country limits and limits for certain products. In addition, credit risk concentration is regularly supervised by credit and risk management committees, taking current market conditions and trend analysis into consideration. A credit quality review process provides an early identification of possible changes in the creditworthiness of clients and includes regular asset and collateral quality reviews, business and financial statement analysis and relevant economic and industry studies. Regularly updated watch lists and review meetings are used for the identification of counterparties where adverse changes in creditworthiness could occur.

### Counterparty and transaction rating

The CSi group employs a set of credit ratings for the purpose of internally rating counterparties to whom the CSi group are exposed to credit risk as the contractual party. Credit ratings are intended to reflect the risk of default of each counterparty. Ratings are assigned based on internally developed rating models and processes, which are subject to governance and internally independent validation procedures.

The CSi group's internal ratings may differ from counterparty's external ratings where present. Policy requires the review of internal ratings at least annually. For the calculation of internal risk estimates and RWAs, a probability of default ('PD') is assigned to each facility, with the PD determined by the internal credit rating. Internal ratings are based on the analysis and evaluation of both quantitative and qualitative factors. The specific factors analysed are dependent on the type of counterparty. The analysis emphasises a forward looking approach, concentrating on economic trends and financial fundamentals. Analysts make use of peer analysis, industry comparisons, external ratings and research, other quantitative tools and the judgment of credit experts. The PD for each rating is calibrated based on historic default experience, using external data from Standard & Poor's, and backtested to ensure consistency with internal experience.

The CSi group assigns an estimate of expected loss in the event of a counterparty default based on the structure of each transaction. The counterparty credit rating is used in combination with credit (or credit equivalent) exposure and the loss given default ('LGD') assumption to estimate the potential credit loss. LGD represents the expected loss on a transaction should default occur and takes into account structure, collateral, seniority of the claim and, in certain areas, the type of counterparty. CSi group uses credit risk estimates consistently for the purposes of approval, establishment and monitoring of credit limits and credit portfolio management, credit policy, management reporting, risk-adjusted performance measurement, economic capital measurement and allocation and certain financial accounting purposes. This approach also allows us to price transactions involving credit risk more accurately, based on risk/return estimates. The overall internal credit rating system has been approved by Swiss Financial Market Supervisory Authority (FINMA) for application under the Basel II A-Internal Rating Based ('IRB') approach.

### Credit risk overview

All transactions that are exposed to potential losses due to failure of meeting an obligation by counterparty are subject to credit risk exposure measurement and management.

### Collateral held as security

CSi group actively manages its credit exposure utilising credit hedges, collateral and guarantees. Collateral is security in the form of an asset, such as cash and marketable securities that serves to mitigate the inherent risk of credit loss and to improve recoveries in the event of a default.

The policies and processes for collateral valuation and management are driven by:

- legal documentation that is agreed with CSi's counterparties; and
- an internally independent collateral management function.

The valuation of the collateral portfolio is performed daily as per the availability of independent market data, for traded products. Exceptions are governed by the calculation frequency described in the legal documentation. The management of collateral is standardised and centralised to ensure complete coverage of traded products.

### Primary types of collateral

Collateral securing foreign exchange transactions and OTC trading activities includes:

- Cash and US Treasury instruments;
- G -10 government securities; and
- Gold or other precious metals.

Collateral securing loan transactions includes:

- Financial collateral pledged against loans collateralised by securities (mostly cash and marketable securities), and
- Physical collateral (real estate property for mortgages, mainly retail residential, but also multi-family buildings, offices and commercial properties); and
- Other types of lending collateral such as accounts receivable, inventory and plant and equipment.

For further information on collateral refer to Note 37 – Assets Pledged or Assigned.

### Maximum exposure to credit risk

The following table presents the maximum exposure to credit risk of balance sheet and off-balance sheet financial instruments, before taking account of the fair value of any collateral held or other credit enhancements unless such credit enhancements meet offsetting requirements as set out in IAS 32. For financial assets recognised on the balance sheet the exposure to credit risk equals their carrying amount as at 31 December 2012. For financial guarantees granted and other credit-related contingencies the maximum exposure to credit risk is the maximum amount that Credit Suisse would have to pay if the guarantees and contingencies are called upon. For loan commitments and other credit-related commitments that are irrevocable over the life of the respective facilities the maximum exposure to credit risk is the full amount of the committed facilities.

## Maximum exposure to credit risk

| 2012 | Group | | | Bank | | |
|---|---|---|---|---|---|---|
| | Gross | Collateral | Net | Gross | Collateral | Net |
| **Maximum exposure to credit risk (USD million)** | | | | | | |
| Cash and due from banks | 18,690 | - | 18,690 | 18,553 | - | 18,553 |

| **Maximum exposure to credit risk** | **707,637** | **541,187** | **166,450** | **709,195** | **541,089** | **168,106** |

The CSi group is exposed to credit risk as a result of either a counterparty or issuer being unable or unwilling to honour its contractual obligations. These exposures to credit risk exist within financing relationships, derivatives and other transactions.

The CSi group typically enters into master netting arrangements (MNA's) with over the counter (OTC) derivative counterparties. The MNA's allow the CSi group to offset derivative liabilities against the derivative assets with the same counterparty in the event the counterparty defaults. Collateral on these derivative contracts is usually posted on a net counterparty basis and comprises either cash or marketable securities or a combination thereof. To the extent an exchange or clearing house acts as a counterparty to a derivative transaction, credit risk is generally considered to be limited as the CSi group is required to maintain a margin. Included in the table above as collateral and other credit enhancements are the derivative liability amounts which would be offset against the derivative asset position upon default of the counterparty as well as any cash or marketable securities collateral held. Amounts disclosed as collateral and credit enhancements are where a counterparty has an offsetting derivative exposure with the CSi group, a MNA exists, and the credit risk exposure is managed on a net basis or the position is specifically collateralised, typically in the form of cash.

Also included in the table within both loans and receivables and financial assets designated at fair value through profit and loss is collateral which the CSi group holds against loans in the form of guarantees, cash and marketable securities. The CSi group also mitigates its credit exposures on certain loans primarily with credit default swaps, which economically hedge the position and as such the notional on the relevant credit default swap has been included. For further information on the collateral and credit enhancements held against loans designated at fair value, refer to Note 16 – Financial Assets and Liabilities Designated at Fair Value through Profit and Loss.

Reverse repurchase agreements and securities borrowings are typically fully collateralised instruments and in the event of default, the agreement provides the CSi group the right to liquidate the collateral held. Reverse repos are included either within securities or financial assets designated at fair value through profit and loss, based on the accounting methodology. These instruments are collateralised principally by government securities, money market instruments, corporate bonds and cash. The CSi group monitors the fair value of securities borrowed and loaned on a daily basis with additional collateral obtained as necessary. The fair value of the collateral has been included in the table above. For further information on the collateral and credit enhancements held against reverse repurchase agreements and securities borrowing refer to Note 14 – Securities Borrowed, Lent and Subject to Resale or Repurchase Agreements.

Included within other (Financial assets designated at fair value through profit or loss) are failed purchases that arise when a transaction to purchase an asset has not met the conditions for sale accounting. The CSi group typically holds collateral in the form of insurance or securities against the failed purchases.

Collateral held against financial guarantees and loan commitments typically includes securities and letters of credit. For further information about the collateral and credit enhancements held against financial guarantees and loan commitments refer to Note 34 – Guarantees and Commitments.

For further information on collateral held as security that the CSi group is permitted to sell or repledge refer to Note 37 – Assets Pledged or Assigned.

If collateral or the credit enhancement value for a particular instrument is in excess of the maximum exposure then the value of collateral and other credit enhancements included in the table has been limited to the maximum exposure to credit risk.

## Risk mitigation

CSi actively manages its credit exposure utilising credit hedges and monetiseable collateral (cash and marketable securities). Credit hedges represent the notional exposure that has been transferred to other market counterparties generally through the use of credit default swaps. CSi also actively enters into collateral arrangements for OTC derivatives and other traded products which allow it to limit the counterparty exposure risk associated with these products. Collateral taken generally represents cash or government securities although other securities may be accepted. The value of collateral reflected as a risk mitigant is net of an appropriate haircut.

### Counterparty exposure before collateral by rating

| Bank | 31 December 2012 | | 31 December 2011 | |
|---|---|---|---|---|
| | USD million | % | USD million | % |
| AAA | 3,315 | 4 | 7,048 | 8 |
| AA+ to AA- | 17,445 | 21 | 19,665 | 21 |
| A+ to A- | 33,067 | 39 | 32,920 | 36 |
| BBB+ to BBB- | 15,062 | 18 | 16,536 | 18 |
| BB+ to BB- | 8,117 | 9 | 8,518 | 9 |
| B+ and below | 7,350 | 9 | 7,684 | 8 |
| | **84,356** | **100** | **92,371** | **100** |

### Unsecured exposure by rating (including provisions)

| Bank | 31 December 2012 | | 31 December 2011 | |
|---|---|---|---|---|
| | USD million | % | USD million | % |
| AAA | 3,958 | 13 | 6,521 | 19 |
| AA+ to AA- | 7,834 | 25 | 8,203 | 23 |
| A+ to A- | 9,606 | 31 | 9,641 | 27 |
| BBB+ to BBB- | 4,503 | 14 | 5,139 | 15 |
| BB+ to BB- | 1,886 | 6 | 1,733 | 5 |
| B+ and below | 3,413 | 11 | 3,788 | 11 |
| | **31,200** | **100** | **35,025** | **100** |

The above tables include all loans, commitments, derivatives, securities purchased and sold under repurchase and resale agreements, and short term cash trades on a net counterparty exposure basis for the Bank as most of the trading portfolio mainly resides in the Bank.

The first table represents mark to market exposures before offsetting any eligible collateral held; the second table represents mark to market exposures after offsetting collateral.

### vi) Country Risk

Country risk is the risk of a substantial, systemic loss of value in the financial assets of a country or group of countries, which may be caused by dislocations in the credit, equity and/or currency markets. CS group's major operating divisions all assume country risk in a variety of ways. The setting of limits for this risk is the responsibility of CARMC, based on the recommendations of CRM, SRM and CS group's economists.

Country limits for emerging markets are approved annually by the Board of Directors of CSG, following recommendations from CARMC. The measurement of exposures against country limits is undertaken by RAR with bi-monthly reports to senior management and monthly reports to CARMC. For trading positions, country risk is a function of the mark-to-market exposure and currency of the position, while for loans and related facilities country risk is a function of the amount and currency that CS group has lent or committed to lend. The day-to-day management of country exposure is assigned to each of the core businesses in accordance with its business authorisations and limit allocations. RAR and CRM provide independent oversight to ensure that the core businesses operate within their limits. CRM is responsible for periodically adjusting these limits to reflect changing credit fundamentals and business volumes.

**vii) Settlement Risk**

Settlement risk arises whenever the settlement of a transaction results in timing differences between the disbursement of cash or securities and the receipt of countervalue from the counterparty. This risk arises whenever transactions settle on a 'free of payment' basis and is especially relevant when operating across time zones.

In those instances where market convention and/or products preclude a value-for-value exchange, the CSi group manages its risk through confirmation and affirmation of transaction details with counterparties. In order to reduce gross settlement risk the CSi group leverages Clearing Houses, Central Counterparties and Central Settlement services and will also net gross cashflows with a given counterpart where possible. It proactively seeks to manage the timing of settlement instructions to its agents and the reconciliation of incoming payments in order to reduce the window of exposure. In addition, CRM establishes and monitors limits to control the amount of settlement risk incurred to each counterparty.

**viii) Legal Risk**

The CS group faces significant legal risks in its businesses. Legal risks include, among other things, disputes over the terms of trades and other transactions in which the CS group acts as principal; the unenforceability or inadequacy of the documentation used to give effect to transactions in which the CS group participates; investment suitability concerns; compliance with the laws and regulations (including change in laws or regulations) of the many countries in which the CS group does business; and disputes with its employees. Some of these transactions or disputes result in potential or actual litigation that the CS group must incur legal expenses to defend.

The CS group is subject to extensive regulation in the conduct of its investment business. A failure to comply with applicable regulations could result in regulatory investigations, fines and restrictions on some of the CS group's business activities or other sanctions. The CS group seeks to minimise legal risk through the adoption of compliance and other policies and procedures, continuing to refine controls over business practices and behaviour, employee training sessions, the use of appropriate legal documentation, and the involvement of the Legal and Compliance department and outside legal counsel. In addition, the CS group is an active participant in ISDA and other professional derivative market forums, with specific focus on improving levels of derivative market and product standardisation, legal definition and protocol.

**ix) Operational risk**

Operational risk is the risk of loss resulting from inadequate or failed internal processes, people or systems or from external events. CS group's primary aim is the early identification, recording, assessment, monitoring, prevention and mitigation of operational risks, as well as timely and meaningful management reporting. Where appropriate, CS group transfers operational risks to third-party insurance companies.

Operational risk is inherent in most aspects of CS group's activities and is comprised of a large number of disparate risks. While market and credit risk are often chosen for the prospect of gain, operational risk is normally accepted as a necessary consequence of doing business. In comparison to market or credit risk, the sources of operational risk are difficult to identify comprehensively and the amount of risk is also inherently difficult to measure. CS group believes that effective management of operational risk requires a common firm-wide framework with ownership of these risks residing with the management responsible for the relevant business process.

### Operational risk management

The central BORO team within the risk management function is responsible for the overall operational risk management framework design and methodology.  It ensures cohesiveness of policies, tools and practices throughout the firm for operational risk management specifically with regard to identification, evaluation, mitigation, monitoring and reporting of relevant operational risks.

Each individual business area takes responsibility for its operational risks and the provision of adequate resources and procedures for the management of those risks.  Businesses are supported by designated operational risk teams at the divisional and CS group level who are responsible for the implementation of the operational risk management framework, methodologies, tools and reporting within their areas as well as working with management on any operational risk issues that arise.

Operational risk issues, metrics and exposures are discussed at the Bank's Risk management committees, which has senior staff representatives from all the relevant functions.  The Bank utilises a number of CS group-wide tools for the management and reporting of operational risk.  These include risk and control self-assessments, scenario analysis, key risk indicator reporting and the collection, reporting and analysis of internal and external loss data.  Knowledge and experience are shared throughout the CS group to maintain a coordinated approach.  CS group is continuously improving operational risk management practices and, in 2012, operational risk appetite was added as a new element of the Bank's overall risk appetite framework.  The framework is based on quantitative and qualitative tolerance levels.  Tolerance levels are monitored and reported to the Banks's Risk management committees which monitors management adherence and oversee remediation and resolution of breaches.

### x) Reputational Risk

It is CS group's policy to avoid any action, transaction or relationship with a Politically Exposed Person which poses an unacceptable level of risk to the CS group's reputation.  Reputational risk may arise from a variety of sources, including, but not limited to, the nature or purpose of a proposed transaction, the identity or nature of a potential client, the regulatory or political climate in which the business will be transacted or significant public attention surrounding the transaction itself.  The CSi Board has formally delegated Reputational Risk issues to CS group's global Reputational Risk Review Process ('RRRP') and where an action or transaction gives rise to potential reputational risk for CS group, the relevant business proposal is required to be submitted to the RRRP.  The RRRP involves a vetting of the proposal by senior business management, and its subsequent referral to one of CS group's Reputational Risk Approvers, each of whom is independent of the business divisions and has the authority to approve, reject, or impose conditions on CS group's participation.  Reputational Risk statistics, trends and notable submissions are reported to the CSi Board on a quarterly basis.

## 40. Business Combination

On 30 April 2011, CSG completed the acquisition of the PFS business carried on by ABN AMRO Bank N.V.  ('ABN') as successor to Fortis Bank (Nederland) N.V.  ('Fortis').  As part of that acquisition, CSi Dublin Branch acquired certain assets and assumed certain liabilities of ABN AMRO Bank (Ireland) Ltd and ABN AMRO Administration Services (Ireland) Ltd in an asset purchase transaction.  CSi Dublin Branch also acquired 100% of the shares of Prime Nominees (Ireland) Ltd and Prime Nominees (Asia) Ltd in a stock purchase transaction.

| | 2011 |
|---|---|
| **Consideration (USD million)** | |
| **Cash** | **14** |
| **Recognised amounts of identifiable assets acquired and liabilities assumed (USD million)** | |
| ■ Cash and due from banks | 2,574 |
| ■ Trading financial assets at fair value through profit and loss | 156 |
| ■ Other loans and advances | 394 |
| ■ Other assets | 3 |
| ■ Intangible assets (including customer list) | 7 |
| ■ Property and equipment | 10 |
| ■ Deposits | (2,970) |
| ■ Trading financial liabilities at fair value through profit or loss | (154) |
| ■ Other liabilities | (2) |
| **Net assets acquired and liabilities assumed** | **18** |
| **Gain arising on acquisition** | **4** |

The acquisition enhanced CSi group's offering to the alternative investment community through PFS's leading services, which include independent administrative services, investor services, net asset value calculation, banking, custody and financing solutions. PFS is a strong fit with CSi group's client-focused, capital-efficient strategy and further strengthened CSi group's Equities franchise by creating a more complete solution for hedge fund clients.

An intangible asset arose on acquisition relating to the customer list obtained through the transaction. This asset of USD 5 million has been recorded by CSi Dublin Branch and will be amortised over a 13 year period on a straight-line basis.

The transaction included provision for certain contingent consideration however, in the event that this should become payable, it is not material to CSi group.

Revenues and profit in 2012 were not material to the CSi group.

## 41. Capital Adequacy

CSi's capital adequacy and capital resources are managed and monitored based on practices developed by the Basel Committee on Banking Supervision (the 'Basel Committee') and governed by European Union directives. These directives are implemented in the UK by the FSA, the UK regulator, and incorporated within its prudential sourcebooks for banks and investment firms.

### Capital Resources

Regulatory capital resources comprise a number of 'tiers'. Tier 1 capital principally comprises shareholders' equity. This is supplemented by Tier 2 and Tier 3 capital, which consist mainly of subordinated debt instruments. Total capital equals the sum of these, less regulatory deductions for items specified by the regulators, including material holdings of capital instruments issued by banks and investment firms, along with prudential filters, which are adjustments to accounting values for regulatory purposes.

CSi's overall capital needs are reviewed to ensure that its capital base can appropriately support the anticipated needs of its businesses. The capital management framework at CSG is designed to ensure that capital resources are sufficient to support the underlying risks of the business activity, to meet the objectives of management and to meet the requirements of regulators, rating agencies and market participants.

In addition to the capital restructuring in February 2012, CSi also received a capital injection of USD 2 billion during the course of 2012 in order to support the business. There was also a Tier 1 injection of USD 202 million to replace Tier 2 subordinated debt that was repaid. There were no capital injections in 2011. Other movements in capital resources were as follows:

| | 2012 | 2011 |
|---|---|---|
| **Regulatory capital less deductions (USD million)** | | |
| **Total regulatory capital less deductions at 1 January** | **20,471** | **19,334** |
| Changes in Tier 1 instruments: | | |
| ■ Capital Injections | 2,000 | - |
| ■ Increase on reorganisation of capital base | 3,165 | - |
| Changes in Tier 2 instruments: | | |
| ■ Decrease on reorganisation of capital base | (3,155) | - |
| Profit and loss and movements in other comprehensive income (including solo-consolidated entities) | (665) | (294) |
| Net movement on Tier 2 capital (amortisation and currency translation) | 10 | (21) |
| Net movement in regulatory deductions and prudential filters | 216 | 1,452 |
| **Total regulatory capital less deductions at 31 December** | **22,042** | **20,471** |

Under the Basel Committee guidelines, an institution must have a ratio of total eligible capital to aggregate risk-weighted assets of at least 8% although the FSA requires this ratio to exceed the Individual Capital Guidance ('ICG') determined for each institution. This ratio can also be expressed as a capital coverage ratio, being the ratio of total eligible capital to total capital resources requirements, which must be at least 100%. The capital resources requirements reflect the credit, market and other risks of the Bank calculated using methodologies set out by the FSA.

CSi must at all times monitor and demonstrate the compliance with the relevant regulatory capital requirements of the FSA. CSi has put in place processes and controls to monitor and manage its capital adequacy and no breaches were reported to the FSA during the year.

The following table sets out details of CSi's regulatory capital resources at 31 December 2012 and 2011.

| | 2012 | 2011 |
|---|---|---|
| **Regulatory capital less deductions (USD millions)** | | |
| **Total shareholders' equity-Bank** | **15,577** | **11,102** |
| Reconciliation to Tier 1 capital: | | |
| ■ Regulatory deductions | (465) | (407) |
| ■ Prudential filters | (63) | (157) |
| ■ Reserves of solo-consolidated entities | 22 | (3) |
| **Tier 1 capital less deductions** | **15,071** | **10,535** |
| Tier 2 capital: | | |
| ■ Upper Tier 2- Perpetual Subordinated Debt | 2,507 | 4,188 |
| ■ Lower Tier 2 – Term Subordinated Debt | 4,499 | 5,962 |
| Excess Tier 2 capital | 0 | (694) |
| **Tier 2 capital** | **7,006** | **9,456** |
| | | |
| **Tier 1 plus Tier 2 capital** | **22,077** | **19,991** |
| Deductions | | |
| ■ Securitisation positions | 0 | (24) |
| ■ Expected loss amounts | 0 | - |
| ■ Other investments deducted from capital | (35) | (190) |
| **Tier 1 plus Tier 2 capital, less deductions** | **22,042** | **19,777** |
| Excess Tier 2 capital | 0 | 694 |
| Deductions from total capital | 0 | - |
| **Total regulatory capital less deductions** | **22,042** | **20,471** |

In December 2010, the Basel Committee on Banking Supervision issued the Basel III framework with higher minimum capital requirements, and new conservation and countercyclical buffers, revised risk-based capital measures, a leverage ratio and liquidity standards. This was designed to strengthen the resilience of the banking sector. There have been some subsequent refinements to this framework. The new capital standards and capital buffers will require banks to hold more capital, mainly in the form of common equity. Basel III will be implemented in the EU by amendment to the Capital Requirements Directive (CRD) and will apply to both banks and investment firms. This takes the form of a regulation and a directive which are currently going through the EU legislative process.

## 42. FSA Pillar 3 disclosures

Under a waiver agreed with the FSA, certain of the Pillar 3 disclosures required by the UK implementation of Basel II need not be made by CSi as a stand-alone entity on the basis that they are included in the comparable disclosures provided on a consolidated basis by CS group. Those Pillar 3 disclosures required under FSA rules that are not covered by the CS group disclosures can be found separately at www.credit-suisse.com.

## 43. Subsequent Events

In the UK budget announcement of 20 March 2013, the UK government announced its intention to further reduce the UK corporation tax rate to 20% with effect from 1 April 2015. This tax rate reduction is expected to be substantively enacted in 2014. The effect of this tax rate reduction upon CSi group's deferred tax balance cannot be reliably quantified at this stage.

Also in the UK budget announcement of 20 March 2013, the UK Bank Levy rate from 1 January 2014 will be 14.2 basis points for short term liabilities and 7.1 basis points for long term liabilities.

## Interim Management Report for the Six Months Ended 30 June 2014

The Directors present their Interim Management Report and the Condensed Consolidated Interim Financial Statements for the six months ended 30 June 2014.

### International Financial Reporting Standards

Credit Suisse International's 2014 Condensed Consolidated Interim Financial Statements have been prepared in accordance with IAS 34, "Interim Financial Reporting" as adopted for use in the European Union ('EU'). The Condensed Consolidated Interim Financial Statements comprise Credit Suisse International ('CSi' or the 'Bank') and its subsidiaries – together referred to as the 'CSi group'.

The Condensed Consolidated Interim Financial Statements were authorised for issue by the Directors on 28 August 2014.

### Business Review

#### Profile

Credit Suisse International is a bank domiciled in the United Kingdom.

CSi is a global market leader in over-the-counter ('OTC') derivative products from the standpoints of counterparty service, innovation, product range and geographic scope of operations. CSi offers a range of interest rate, currency, equity, commodity and credit-related OTC derivatives and certain securitised products. CSi's business is primarily client-driven, focusing on transactions that address the broad financing, risk management and investment concerns of its worldwide client base. CSi enters into derivative contracts in the normal course of business for market-making, positioning and arbitrage purposes, as well as for risk management needs, including mitigation of interest rate, foreign currency and credit risk.

CSi is an unlimited company and an indirect wholly owned subsidiary of Credit Suisse Group AG ('CSG'). CSi is authorised under the amended Financial Services and Markets Act 2000 by the Prudential Regulation Authority ('PRA') and regulated by the Financial Conduct Authority ('FCA').

CSG, a company domiciled in Switzerland, is the ultimate parent of a worldwide group of companies (collectively referred to as the 'CS group'). CSG prepares financial statements under US Generally Accepted Accounting Principles ('US GAAP'). These accounts are publicly available and can be found at www.credit-suisse.com.

As a leading financial services provider, CS group is committed to delivering its combined financial experience and expertise to corporate, institutional and government clients and high-net-worth individuals worldwide, as well as to retail clients in Switzerland. CS group serves its diverse clients through two divisions, Investment Banking and Private Banking & Wealth Management, which co-operate closely to provide holistic financial solutions based on innovative products and specially tailored advice. Founded in 1856, CS group has a truly global reach today, with operations in over 50 countries and a team of more than 45,100 employees from approximately 150 different nations.

#### Principal products/principal product areas

The CSi group has three principal business divisions which are managed as a part of the Investment Banking Division of CS group:

- The Fixed Income Division ('FID') provides a complete range of derivative products including forward rate agreements, interest rate and currency swaps, interest rate options, bond options, commodities and credit derivatives for the financing, risk management and investment needs of its customers. FID also engages in underwriting, securitising, trading and distributing a broad range of financial instruments in developed and emerging markets including US Treasury and government agency securities, US and foreign investment-grade and high yield corporate bonds, money market instruments, foreign exchange and real estate related assets.

- The Equity Division engages in a broad range of equity activities for investors including sales, trading, brokerage and market making in international equity and equity related securities, options and futures and OTC derivatives.
- The Investment Banking Division ('IBD') includes financial advisory services regarding mergers and acquisitions, origination and distribution of equity and fixed income securities, leveraged finance and private equity investments and, in conjunction with FID and Equities, capital raising services.

During 2013, Non-Strategic Units were created within the Fixed Income, Equity and Investment Banking divisions to further accelerate a reduction of capital and costs associated with non-strategic activities and positions and to shift resources to focus on strategic businesses and growth initiatives. Non-strategic activities and positions are defined as activities with significant capital absorption under new regulations and returns below expectations, activities with significant leverage exposures identified for de-risking, activities no longer feasible or economically attractive under emerging regulatory frameworks and assets and liabilities of business activities being wound down. Included in the Non-Strategic Units are the fixed income wind-down portfolio, legacy rates business, capital instruments that are not compliant with the Basel III capital framework and capital-intensive structured positions. The Non-Strategic Units have been retained within the divisions, so as to benefit from senior management's expertise and focus. The Non-Strategic Units have separate management within each division and a clear governance structure through the establishment of a Non-Strategic Oversight Board

## Economic environment

In the UK, the annual rate of Consumer Price Index ('CPI') inflation decreased to 1.9% at the end of June 2014, compared to 2.0% at the end of 2013. The Bank of England ('BOE') maintained interest rates at 0.5% through the first six months of the year and the stock of asset purchases financed by the issuance of central bank reserves at GBP 375 billion. The unemployment rate dropped to 6.4% at the end of June from 7.1% at the end of 2013, edging closer to a 6 year low. However, low average wage inflation was cited as a growing concern for monetary policymakers and is likely to have a bearing on the timing of any interest rate decision. UK Gross Domestic Product ('GDP') grew by 0.8% in both the first and second quarter of the year. The UK economy advanced 3.1 percent year on year in the second quarter of 2014, the highest growth rate since the last three months of 2007.

The Bank of England Monetary Policy Committee ('MPC') provided guidance on its monetary policy once the unemployment threshold of 7% was reached. The MPC judged that there was scope for the UK economy to recover further before the Bank Rate was raised and, even when the Bank Rate did rise, it was expected to do so only gradually and to a level materially below its pre-crisis period (2007-2008) average of 5%. This followed the decision of the Federal Open Market Committee ('FOMC') in December 2013 to begin to slow the pace of its asset purchases. The FOMC also stressed that it would hold the main policy rate near zero well past the time when unemployment reached the 6.5% threshold.

The global economic environment showed some signs of softening in the first half of the year, driven mainly by the US and China. Eurozone economic data remained in line with a very gradual recovery, although a renewed decline in French business sentiment emerged. Reflecting a broad improvement in the prospects for the world recovery, there was a strengthening in financial market sentiment and a rise in a range of asset prices. In the United Kingdom short-term interest rates rose and sterling appreciated, with the sterling exchange rate index ending the review period around 1.9% higher than at its start.

The European Central Bank ('ECB') announced a range of new policy initiatives, including cuts in policy rates and new liquidity measures for banks. The ECB signaled that the policy rates would most likely remain unchanged until the end of 2016. At its meeting in June, the US Federal Reserve ('Fed') reduced its monthly asset purchases to USD 35 billion effective from July 2014. Among emerging markets, central banks in Turkey and Mexico lowered their policy rates.

During the period, Sterling appreciated against a broad range of currencies due to improvements in the United Kingdom's economic outlook relative to that of other countries, and rising interest rate differentials with the euro-area. The option-implied volatility of interest rates at short horizons increased a little, but remained low by historical standards. UK and US ten-year government bond yields were largely unchanged over the half-year, as rises in short-term interest rates were broadly offset by lower forward rates. Euro-area sovereign bond yields continued to decline, despite a short period of limited market turbulence that saw sharp increases in the government bond yields of some periphery countries.

Greece re-entered the sovereign bond market during April, having been absent from the market since March 2010, and there were successful issuances from Ireland, Portugal and Spain. Most advanced-economy risky asset prices rose over the half–year and were broadly unaffected by tensions between Ukraine and Russia or other global events. However the CSi group has limited exposure with these two countries and trades are fair valued.

## Financial markets and sector environment

During the first half of the year, equity markets benefited from improved economic momentum and higher risk appetite compared to second half of 2013. However compared to corresponding period of 2013, equity market conditions were subdued. Among developed markets, Japan rebounded after a decrease at the start of the year, driven by fund flows, stable leading indicators (after a consumption tax increase) and reform expectations. The US equity market increase was mainly due to an improvement in macroeconomic data. Emerging markets outperformed developed markets, benefiting from macro data stabilisation in China and reform expectations in certain countries, including India. Equity markets overall traded with lower volatility, as measured by the Chicago Board Options Exchange Market Volatility Index ('VIX'). Risk appetite, as measured by the Credit Suisse equity risk appetite index increased.

In fixed income, at the start of 2014, yields on 10-year benchmark bonds decreased due to geopolitical turmoil in Ukraine and concerns about Chinese economic growth. In contrast, US and UK 2-year benchmark bond yields were slightly higher, reflecting expectations of further reductions in monetary stimulus activity. With a search for yield continuing, credit markets posted a good performance at the start of the year. Credit spreads tightened the most in the European high yield segment. After a mixed initial performance, emerging market hard currency bonds were one of the best performing fixed income asset classes, benefiting from lower US Treasury yields and a significant tightening of spreads.

In currency markets, US dollar performance against most major currencies was mixed. Sterling appreciated against a broad range of currencies. The Euro depreciated against the US dollar in January. However, continued softer US economic data weakened the US dollar in February and March. The euro was slightly weaker against the Swiss franc because of market expectations that the ECB could ease its monetary policy. In emerging markets, the Renminbi depreciated versus the US dollar. The Japanese yen strengthened slightly against the US dollar as the Japanese economy weathered the impact of the consumption tax increase in April fairly well.

In the commodity sector, Commodity markets had a good start to the year. The major commodity indices gained more than 4% during the first half mainly driven by precious metals and agricultural markets. There were gold purchases due to increased geopolitical risks and prices for industrial metals and energy products had smaller increase. Over the last three months of the review period, the energy sector increased due to a surge in oil prices, reflecting geopolitical tensions in Iraq.

European bank stocks increased by 2% at the beginning of the year but fell 2.7% in later period, underperforming the MSCI World Index by 6.4%. North American bank stocks increased 5% at the beginning of the year and remained stable thereafter. In investment banking, global equity trading volumes increase in the first 3 months, and then decreased in the last 3 months but were up on the same period last year. Global announced mergers and acquisitions (M&A) volumes increased compared to the same period in 2013. Global completed M&A volumes decreased compared to the prior period. Global equity underwriting volumes were significantly higher, mainly driven by Europe. Global debt underwriting volumes also increased, while US fixed income volumes were stable over the first six months of the year but lower than the prior year, with particularly weaker mortgage-backed volumes, and with lower treasuries, corporates and federal agency volumes.

## Performance

Consolidated Statement of Income

For the first half of 2014, CSi group reported net loss attributable to shareholders of USD 371 million (2013: USD 388 million gain). Net revenues amounted to USD 882 million (2013: USD 1,384 million). After operating expenses, CSi group reported profit before taxes of USD 101million (2013: USD 453 million).

The first six months of 2014 have been challenging, as divisional revenues decreased to USD 1,226 million (2013: USD 1,827 million). Divisional revenues comprised the following:

- Fixed Income revenues fell 35% in the first half of 2014 to USD 671 million. There was a decline in the Emerging Markets business, mainly due to fewer new deals in 2014 as compared to 2013. In the Rates business revenues declined by 45%, driven by a slowdown in the global swaps business due to increased regulation and a decrease in client flows as markets remained uncertain throughout the Eurozone with market participants expecting the ECB rate reduction. In the Commodities business revenues declined by 42%, mainly in relation to precious metals which experienced weak investor interest coupled with a lack of liquidity and volatility, making the market difficult to trade. Management has taken the decision to exit Commodities trading activity, and this business is being transferred into the Fixed Income Non-Strategic Unit.

- Equity revenues were down 28% in the first half of 2014 to USD 435 million. This was mainly driven by a slowdown in client activity and subdued market conditions affecting both Asia and Europe, resulting in a reduction in new trade activity and declining commissions. In 2013 by comparison, the business benefited from favourable market moves in Japan.

- Investment Banking revenues increased by 30% to USD 120 million for the first six month of the year, driven by gains due to higher volumes in the structured equity and structured fixed income origination businesses.

Included in the divisional revenues above are losses of USD 47 million (2013: USD 136 million gain) in the non-strategic units. The losses in 2014 are due to a focused management strategy to wind down these businesses and reduce associated Risk Weighted Asset (‘RWA’) charges.

Net revenues were positively impacted by the following items not included in the divisional revenues above:

- Reduced revenue sharing expenses for the period of USD 222 million (2013: USD 305 million). This relates to revenue sharing agreements between the CSi group and other CS group companies.

- Reduced treasury funding charges of USD 154 million (2013: USD 225 million). This primarily comprises excess funding charges on long term financing versus overnight funding rates, which are only allocated out to the businesses at the CS group level. The lower average cost of borrowing has been achieved through the restructure of the funding profile.

The CSi group’s interim period operating expenses were USD 771 million (2013: USD 931 million). Compensation costs have decreased by USD 26 million to USD 203 million (2013: USD 229 million) in the first half of 2014. The decrease is primarily due to a decrease in expenses in relation to deferred compensation awards, and payroll tax associated with the awards.

General and administrative expenses decreased by USD 124 million to USD 578 million (2013: USD 702 million), USD 86 million of which was as a result of a decrease in overhead expenses allocated from CS group, reflecting similar compensation cost reductions in CS group. In addition, brokerage charges and clearing house fees decreased by USD 28 million in the first half of 2014 compared to the equivalent period in 2013.

Operating expenses for the six months ended 30 June 2014 do not include an expense in respect of the UK Bank Levy for 2014 (under current accounting requirements, the Bank Levy charge will only be recognised in the financial statements on 31 December each year). The tax, applicable to all Banks and Banking groups operating in the UK, will be charged on liabilities per the statement of financial position as at 31 December 2014 at a rate of 15.6 basis points for all short-term liabilities and 7.8 basis points for long-term liabilities. The estimate of the liability in respect of 2014 is USD 56 million (2013: USD 57 million).

Income tax expense for the six months ended 30 June 2014 was USD 472 million (2013: USD 67 million). Included in the income tax expense is an amount of USD 450 million as a result of the further impairment of the deferred tax asset ('DTA'), following an assessment by management as to whether the DTA can be realised. Refer Note 11 – Income Tax.

Consolidated Statement of Financial Position

As at 30 June 2014 the CSi group had total assets of USD 521 billion (31 December 2013: USD 517 billion)

Balance sheet movements have been dominated by the impacts of managing the required liquidity profile in accordance with risk appetite, regulatory requirements including EBA Basel III, and overall optimisation of the funding profile, as follows:

- An increase of USD 10 billion in securities purchased under resale agreements and securities borrowing transactions of predominantly high quality liquid assets.
- A decrease in cash and due from banks and corresponding increase in interest-bearing deposits with banks of USD 7 billion reflecting the increased term of surplus funds placed on deposit.
- An increase of USD 9 billion long term debt as a result of senior debt from a CS group company.

From an underlying business perspective:

- Trading financial assets at fair value through profit or loss have reduced by USD 14 billion. The decrease was primarily due to mark to market moves on interest rate derivative products. There has similarly been a decrease of USD 8 billion in Trading financial liabilities at fair value through profit or loss.
- Other assets have also increased USD 9 billion to USD 48 billion (31 December 2013: 40 billion), due to an increase in the cash collateral provided to counterparties in relation to derivative exposures.

Total shareholder's equity has reduced to USD 24.7 billion (31 December 2013: USD 25.0 billion), as a result of the net loss for the six months ended 30 June 2014.

## Fair Value Measurement

Financial instruments carried at fair value are categorised under the three levels of the fair value hierarchy, where the significant inputs for the Level 3 assets and liabilities are unobservable.

Total Level 3 assets were USD 11.5 billion as at 30 June 2014 (31 December 2013: USD 12.5 billion), which was equivalent to 2.21% of total assets. The decrease in Level 3 assets was due to cash settlements and the disposal of Level 3 positions, and due to transfers out of Level 3 as a result of increasing observability and quotes on Level 3 loans. Total Level 3 liabilities were USD 10.5 billion as at 30 June 2014 (31 December 2013: USD 11.2 billion), which was equivalent to 2.12% of total liabilities.

Fair Value disclosures are presented in Note 21 – Financial Instruments.

## Selected European credit risk exposures

On a gross basis, before taking into account collateral and CDS hedges, CSi's risk-based sovereign credit risk exposure to Portugal, Italy, Ireland, Greece and Spain as at 30 June 2014 was USD 5.9 billion (net exposure USD 1.0 billion). CSi's non-sovereign risk-based credit exposure to these countries as of the end of the interim period included gross exposure to financial institutions of USD 4.4 billion (net exposure USD 1.9 billion) and to corporate and other counterparties of USD 1.1 billion (net exposure USD 0.8 billion)

## Capital Resources

The Bank closely monitors its capital and liquidity position on a continuing basis to ensure ongoing stability and support of its business activities. This monitoring takes account of the requirements of the current regime and any forthcoming changes to the capital framework. CS group continues to provide confirmation that it will ensure that the Bank is able to meet its debt obligations and maintain a sound financial position over the foreseeable future.

The Bank is required at all times to monitor and demonstrate compliance with the relevant regulatory capital requirements of the PRA. The Bank has put in place processes and controls to monitor and manage the Bank's capital adequacy. No breaches were reported to the PRA during the period.

Changes in senior and subordinated debt are set out in Note 14 – Long Term Debt. There were no changes in capital, refer Note 17 – Share Capital and Share Premium.

## Outlook

In 2014, CSi continued to make progress in executing its client-focused, capital-efficient strategy to meet emerging client needs and regulatory trends. CSi is progressing towards achieving specific goals to reduce its cost base and strengthen its capital position, and has operated under the Basel III capital framework, as implemented in the EU, since January 2014. CSi has further optimised its business footprint, continuing to shift resources to focus on growth in higher returning businesses, and reducing costs and capital in the non-strategic portfolio. As a result of this progress, CSi believes that it is better positioned to perform in a challenging market environment and compete in its chosen businesses and markets around the world.

CSi remains committed to offering its clients a broad spectrum of equities, fixed income, and investment banking advisory products and services. CSi is focused on businesses in which the bank has a competitive advantage and is able to operate profitably with an attractive return on capital in the new regulatory environment. While the industry still faces significant adjustments to new regulatory requirements, CSi has significantly evolved its business model to one that is compliant with the Basel III regulatory framework. CSi will continue to invest in its market-leading, high-returning businesses while optimising its risk weighted assets and cost base to further improve returns.

In light of recent developments such as heightened regulatory focus on leverage, conduct risk, additional capital resource requirements under Basel III, and the migration of markets towards cleared and electronic trading, CSi is focusing on high volume, high liquidity electronic trading as part of its effort to migrate the business model to simplified and primarily exchange-cleared products in derivatives and reduce capital intensive structured activity.

## Dividends

No dividends have been paid for the period ended 30 June 2014 (2013: USD Nil).

## Directors

Changes in the directorate since 31 December 2013 and up to the date of this report are as follows:

Jason Forrester and Christopher Williams were appointed as Executive Directors with effect from 02 May 2014 and 12 June 2014 respectively.

None of the directors who held office at the end of the period was directly beneficially interested, at any time during the year, in the shares of the Bank.

Directors of the CSi group benefited from qualifying third party indemnity provisions in place during the interim period and at the date of this report.

## Subsequent Events

On 01 August 2014, Credit Suisse announced the sale of Prime Fund Services (PFS), a provider of fund administration, custody and banking solutions for alternative investment managers, to BNP Paribas. This includes the PFS business held within the Dublin Branch of the CSi group. The transaction is expected to close in 2015, subject to anti-trust and regulatory clearances.

## Statement of Directors' Responsibilities

We confirm that to the best of our knowledge:

- The condensed set of financial statements has been prepared in accordance with IAS 34, "Interim Financial Reporting" as adopted by the EU;
- The Interim Management Report includes a fair review of the information required by:

  (a) DTR 4.2.7R of the *Disclosure and Transparency Rules*, being an indication of important events that have occurred during the first six months of the financial year and their impact on the condensed set of financial statements; and a description of the principal risks and uncertainties for the remaining six months of the year; and

  (b) DTR 4.2.8R of the *Disclosure and Transparency Rules*, being related party transactions that have taken place in the first six months of the current financial year and that have materially affected the financial position or performance of the entity during that period; and any changes in the related party transactions described in the last annual report that could do so.

Signed on behalf of the Board of Directors on 28 August 2014:

Company Registration Number 2500199

Jason Forrester

Director

| **Cash and due from banks at end of period (USD million)** | | **25,018** | **11,156** |

The accompanying notes on pages 12 to 57 are an integral part of these condensed interim financial statements.

## 1. General

Credit Suisse International ('CSi' or the 'Bank') is a bank domiciled in the United Kingdom. The address of the Bank's registered office is One Cabot Square, London, E14 4QJ. The Condensed Consolidated Interim Financial Statements for the half year ended 30 June 2014 comprise CSi and its subsidiaries (together referred to as the 'CSi group').
The Condensed Consolidated Interim Financial Statements were authorised for issue by the Directors on 28 August 2014.

## 2. Significant Accounting Policies

### Basis of preparation

The accompanying unaudited condensed consolidated financial statements of the CSi group are prepared in accordance with IAS 34 "Interim Financial Reporting" ('IAS 34') as adopted for use in the European Union ('EU') and are stated in United States Dollars ('USD') rounded to the nearest million. Certain financial information, which is normally included in annual consolidated financial statements prepared in accordance with International Financial Reporting Standards ('IFRS') but not required for interim reporting purposes, has been condensed or omitted. These condensed consolidated financial statements should be read in conjunction with the IFRS consolidated financial statements and notes thereto for the year ended 31 December 2013. Except as described below, the accounting policies applied by the CSi group in these condensed consolidated interim financial statements are the same as those applied by the CSi group in its consolidated financial statements for the year ended 31 December 2013. The accounting policies related to the basis of consolidation, equity method investments and netting are no longer applicable due to the adoption of recently effective accounting standards and instead are replaced by the requirements of IFRS 10, IFRS 11 and IAS 32 as described below.

The condensed consolidated interim financial statements are prepared on the historical cost basis except that the following assets and liabilities are stated at their fair value: derivative financial instruments, financial instruments held for trading and financial instruments designated by the CSi group as at fair value through profit and loss.

The preparation of condensed interim financial statements in conformity with IFRS requires management to make estimates and assumptions for certain categories of assets and liabilities. These estimates and assumptions affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities as of the date of the condensed consolidated Interim Statement of Financial Position and the reported amounts of revenues and expenses during the reporting period. The estimates and associated assumptions are based on historical experience and various other factors that are believed to be reasonable under the circumstances, the results of which form the basis of making the judgements about carrying values of assets and liabilities that are not readily apparent from other sources. Actual results could differ from management's estimates.

The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the period in which the estimate is revised if the revision affects only that period or in the period of revision and future periods if the revision has a significant effect on both current and future periods.

The CSi group and the Bank have unrestricted and direct access to funding sources of CSG. After making enquiries of CSG, the Directors of the Bank have received a confirmation that CSG will ensure that the Bank maintains a sound financial position and is able to meets its debt obligations for the foreseeable future. Accordingly the Directors have prepared these Condensed Consolidated Interim Financial Statements on a going concern basis.

### Standards and Interpretations effective in the current period

The CSi group has adopted the following amendments in the current period:

- IFRS 10 Consolidated Financial Statements: In May 2011, the IASB issued IFRS 10, "Consolidated Financial Statements" (IFRS 10). The objective of IFRS 10 is to establish principles for the presentation and preparation of consolidated financial statements when an entity controls one or more other entities. IFRS 10 builds on existing principles by identifying the concept of control as the determining factor in whether an entity should be included within the consolidated financial statements of the parent company. The standard provides additional guidance to assist in the determination of control where this may be difficult to assess. The adoption of IFRS 10 on 1 January 2014, did not have a material impact on the CSi group's financial position, results of operation or cash flows.

- IFRS 11 Joint Arrangements: In May 2011, the IASB issued IFRS 11 "Joint Arrangements" (IFRS 11). IFRS 11 specifies that a party to a joint arrangement determines the type of joint arrangement in which it is involved by assessing its rights and obligations. The adoption of IFRS 11 on 1 January 2014, did not have an impact on the CSi group's financial position, results of operation or cash flows.

- IFRS 12 Disclosures of Interests in Other Entities: In May 2011, the IASB issued IFRS 12 "Disclosure of Interests in Other Entities" (IFRS 12). IFRS 12 requires entities to disclose information that enables users of the financial statements to evaluate the nature of, and any associated risks of, its interests in other entities and the effects of those interests on its financial position, financial performance and cash flows. IFRS 12 requires certain disclosures, for subsidiaries, joint arrangements and associates and introduces new requirements for unconsolidated structured entities. As IFRS 12 requires disclosures only, the adoption thereof on 1 January 2014 did not have an impact on the CSi group's financial position, results of operation or cash flows. As these are condensed interim financial statements and there has not been any significant change in business during this interim reporting period, the disclosures required as a result of adoption will be included in the financial statements for the year ending 31 December 2014.

- IAS 27 Separate Financial Statements: In May 2011, the IASB issued an amended version of IAS 27 "Separate Financial Statements" (IAS 27). IAS 27 outlines the accounting and disclosure requirements for separate financial statements. The adoption of IAS 27 on 1 January 2014 had no impact as CSi does not prepare separate interim financial statements.

- IAS 28 Investments in Associates and Joint Ventures: In May 2011, the IASB issued IAS 28 "Investments in Associates" (IAS 28). The objective of IAS 28 is to prescribe the accounting for investments in associates and to set out the requirements for the application of the equity method when accounting for investments in associates and joint ventures. The adoption of IAS 28 on 1 January 2014, did not have an impact on the CSi group's financial position, results of operation or cash flows.

- IAS 32 Offsetting Financial Assets and Financial Liabilities: In December 2011, the IASB issued amendments to IAS 32 "Offsetting Financial Assets and Financial Liabilities" (IAS 32). The amendments address inconsistencies in current practice when applying the offsetting criteria in IAS 32 'Financial Instruments – Presentation'. The amended IAS 32 restricts offsetting on the Statement of Financial Position to only those arrangements in which a right of set-off exists that is unconditional and legally enforceable, in the normal course of business and in the event of the default and bankruptcy or insolvency of the CSi group and its relevant counterparties and for which the CSi group intends to either settle on a net basis, or to realise the asset and settle the liability simultaneously. The amendments also provide incremental guidance for determining when gross settlement systems result in the functional equivalent of net settlement. As a result of the adoption of the amendments, the CSi group does not net transactions where a legal opinion meeting the above criteria has not been obtained. The adoption on 1 January 2014 resulted in a restatement (increase) to both total assets and total liabilities of USD 7.1 billion, as at 31 December 2013. There was no impact on total equity, net profit or earnings per share.

- Transition guidance for IFRS 10, IFRS 11 and IFRS 12: In June 2012, the IASB issued "Consolidated Financial Statements, Joint Arrangements and Disclosure of Interest in Other Entities; Transition Guidance" (Amendments to IFRS 10, IFRS 11 and IFRS 12). The amendments are intended to provide additional transition relief in IFRS 10, IFRS 11 and IFRS 12, by limiting the requirement to provide adjusted comparative information to only the preceding comparative period. Additionally, amendments were made to IFRS 11 and IFRS 12 to eliminate the requirement to provide comparative information for periods prior to the immediately preceding period. The CSi group has adopted the requirements of this amendment with the provisions of IFRS 10, IFRS 11 and IFRS 12 as at 1 January 2014. As the transition guidance is clarifications to IFRS 10, IFRS 11 and IFRS 12, the impact is included in the adoption of the standards respectively.

- Investment Entities (Amendments to IFRS 10, IFRS 12 and IAS 27): In October 2012, the IASB issued "Investment Entities Amendments to IFRS 10, IFRS 12 and IAS 27" (Investment Entities Amendment). Under IFRS 10, reporting entities were required to consolidate all investees they control, however the Investment Entities Amendment provides an exception and requires investment entities to measure particular subsidiaries at fair value through profit or loss, rather than consolidate them. The Investment Entities Amendment sets out disclosure requirements for investment entities. The adoption of the Investment Entities Amendment on 1 January 2014, did not have an impact on the CSi group's financial position, results of operation or cash flows.

- IFRIC 21 Levies: In May 2013, the IASB issued "Levies" (IFRIC 21). The Interpretation clarifies that the obligating event that gives rise to a liability to pay a levy is the activity described in the relevant legislation that triggers the payment of the levy. IFRIC 21 is effective for annual periods beginning on or after 1 January 2014. The adoption of IFRIC 21 on 1 January 2014, did not have an impact on the CSi group's financial position, results of operation or cash flows.

### Standards and Interpretations not endorsed by the EU and not yet effective

The CSi group is not yet required to adopt the following standards and interpretations which are issued by the IASB but not yet effective and have not yet been endorsed by the EU.

- IFRS 9 Financial Instruments: In November 2009 the IASB issued IFRS 9 "Financial Instruments" (IFRS 9) covering the classification and measurement of financial assets which introduces new requirements for classifying and measuring financial assets. In October 2010, the IASB reissued IFRS 9, which incorporated new requirements on the accounting for financial liabilities. In July 2014, the IASB issued IFRS 9 as a complete standard. The Standard includes requirements for recognition and measurement, impairment, derecognition and general hedge accounting. IFRS 9 is effective for annual periods beginning on or after 1 January 2018. The CSi group is currently evaluating the impact of adopting IFRS 9.

- Annual Improvements to IFRSs 2010-2012 Cycle and 2011-2013 Cycle: In December 2013, the IASB issued both "Annual Improvements to IFRSs Cycle 2010-2012" and "Annual Improvements to IFRSs Cycle 2011-2013" (Improvements to IFRSs), which contain numerous amendments to IFRS that the IASB considers non-urgent but necessary. The Improvements to IFRSs are effective for annual periods beginning on or after 1 July 2014. The CSi group is currently evaluating the impact of adopting these Improvements to IFRSs.

- IFRS 15 Revenue from Contracts with Customers: In May 2014, the IASB issued "Revenue from Contracts with Customers" (IFRS 15). IFRS 15 establishes a single, comprehensive framework for revenue recognition. The core principle of IFRS 15 is that an entity will recognise revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services. IFRS 15 also includes disclosure requirements to enable users of financial statements to understand the nature, amount, timing and uncertainty of revenue and cash flows arising from contracts with customers. IFRS 15 is effective for annual reporting periods beginning on or after 1 January 2017. The CSi group is currently evaluating the impact of adopting IFRS 15.

The accounting policies have been applied consistently by all CSi group entities.

Certain reclassifications have been made to the prior year Condensed Consolidated Financial Statements of the CSi group to conform to the current year's presentation and had no impact on net (loss)/ income or total shareholders' equity.

## 3. Segmental Analysis

The CSi group has three reportable segments that are regularly reviewed by the CSi Board when assessing the performance and allocation of resources. These segments are based on products and services offerings of the CSi group:

| | |
|---|---|
| Fixed Income: | The fixed income division (FID) operates in rates, foreign exchange, credit, structured products trading, emerging markets, and commodities markets. The operations also include ongoing management and wind-down of legacy businesses in CDOs, RMBS origination, CMBS and Commodities. The product suite covers both cash and OTC derivatives including government bonds, corporate bonds, treasury bills, interest rate swaps, credit-default swaps, foreign exchange options, total return swaps, and listed options across product classes. |
| Equities: | The activities of the equities division include sales, trading, financing, prime brokerage services and market-making in global equity and equity-related securities, options, futures, risk management and hedging products. Activities cover both exchange-traded and over-the counter traded securities, including American Depositary Receipts, restricted stocks, equity repurchases, block trade executions, program trading executions, equity derivatives and convertible securities. |
| Investment banking: | The investment banking division ('IBD') service offering includes mergers and acquisitions, debt, equity and other capital raising activities. |

Segment performance is assessed by management based on the monthly 'Financial Results' summary report, which details revenues by segment. The CSi group assets and liabilities are not managed by segment. Expenses are managed as part of the wider CS group management processes and therefore, while the CSi Board does assess the overall expense base for the CSi group, it does not manage the expenses at a CSi group segment level.

In addition, certain revenue items are not directly allocated to the above business segments at a CSi Bank level. These items include transfer pricing, certain credit risk allocations, treasury and corporate centre allocations. These are not included as an operating segment as they are not separate business activities from which the CSi group may earn revenues.

Transactions between reportable segments are held at an arm's length basis and are included in the segment result.

The following table shows the external revenue of each operating segment during the periods:

| | Six month period ended 30 June 2014 | Six month period ended 30 June 2013 |
|---|---|---|
| **Revenues (USD million)** | | |
| Fixed Income | 671 | 1,227 |
| Equities | 435 | 556 |
| Investment banking | 120 | 92 |
| **Total** | **1,226** | **1,875** |

The following table shows the CSi group's revenue by managed region which generates the revenue:

| | Six month period ended 30 June 2014 | Six month period ended 30 June 2013 |
|---|---|---|
| **Revenues (USD million)** | | |
| EMEA[1] | 782 | 1,202 |
| Americas | 213 | 282 |
| Asia | 231 | 391 |
| **Total** | **1,226** | **1,875** |

1 EMEA is defined as Europe, Middle East and Africa excluding Switzerland and Luxembourg.

### Reconciliation of reportable segment revenues

| | Six month period ended 30 June 2014 | Six month period ended 30 June 2013 |
|---|---|---|
| **Reconciliation of reportable segment revenues (USD million)** | | |
| Total revenues for reportable segments – Management Information | 1,226 | 1,875 |
| Revenue sharing agreements | (222) | (305) |
| Treasury funding | (154) | (225) |
| Other corporate items[1] | (56) | (66) |
| CS group to primary reporting reconciliations[2] | 88 | 105 |
| **Net Revenues per statement of comprehensive income** | **882** | **1,384** |

1. Significant item being fair value changes in issued structured notes due to changes in the CSi group's own creditworthiness.
2. This is the difference between the monthly board summaries which are prepared on a US GAAP basis and the CSi accounts prepared in accordance with IFRS, and also includes the impact of adopting IFRS13.

The CSi group is not reliant on any single customer for its revenue generation.

### CSi group Assets:

Non-current assets, other than financial instruments, deferred tax assets, post-employment benefit assets and rights arising under insurance contracts, consist of property and equipment, investment property and intangible assets totalling USD 1,052 million (31 December 2013: USD 1,124 million), all of which are located in EMEA.

## 4. Net Interest Income/(Expense)

| | Six month period ended 30 June 2014 | Six month period ended 30 June 2013 |
|---|---|---|
| **Net interest expense (USD million)** | | |
| Other loans and receivables | 196 | 242 |
| Securities purchased under resale agreements and securities borrowing transactions | 46 | 74 |
| Cash collateral paid on OTC derivatives transactions | 33 | 38 |
| Cash and cash equivalents and loans | 109 | 55 |
| **Interest income** | **384** | **409** |
| Deposits | (1) | (7) |
| Short term borrowings | (94) | (165) |
| Securities sold under resale agreements and securities lending transactions | (32) | (45) |
| Long term debt | (156) | (209) |
| Cash collateral received on OTC derivatives transactions | (56) | (41) |
| **Interest expense** | **(339)** | **(467)** |
| **Net interest income/( expense)** | **45** | **(58)** |

## 5. Release of Provision for Credit Losses

| | Six month period ended 30 June 2014 | Six month period ended 30 June 2013 |
|---|---|---|
| **Release of provision for credit losses (USD million)** | | |
| Additional provision for credit losses | (6) | (6) |
| Release of provision for credit losses | 9 | 12 |
| **Release of provision for credit losses** | **3** | **6** |

## 6. Commission and Fee Income

| | Six month period ended 30 June 2014 | Six month period ended 30 June 2013 |
|---|---|---|
| **Commission and fee income (USD million)** | | |
| Lending business | 76 | 87 |
| Other customer services | (71) | (66) |
| **Net commission and fee income** | **5** | **21** |
| Total commission and fee income | 76 | 87 |
| Total commission and fee expense | (71) | (66) |
| **Net commission and fee income** | **5** | **21** |

## 7. Other Revenue

| | Six month period ended 30 June 2014 | Six month period ended 30 June 2013 |
|---|---|---|
| **Other Revenue (USD million)** | | |
| Revenue sharing agreement expense | (222) | (305) |
| Other | 16 | (10) |
| **Other revenue** | **(206)** | **(315)** |

The revenue sharing agreement expense principally relates to revenue sharing agreements between the CSi group and other CS group companies.

## 8. Compensation and Benefits

| | Six month period ended 30 June 2014 | Six month period ended 30 June 2013 |
|---|---|---|
| **Compensation and Benefits (USD million)** | | |
| Salaries and variable compensation | (176) | (196) |
| Social security | (19) | (25) |
| Pensions | (7) | (6) |
| Other | (1) | (2) |
| **Compensation and benefits** | **(203)** | **(229)** |

## 9. General and Administrative Expenses

| | Six month period ended 30 June 2014 | Six month period ended 30 June 2013 |
|---|---|---|
| **General and administrative expenses (USD million)** | | |
| Amortisation expenses | (95) | (84) |
| Depreciation expenses | (33) | (33) |
| Impairment of intangible assets and investment property | (17) | (43) |
| Brokerage charges and clearing house fees | (139) | (167) |
| Professional services | (13) | (19) |
| CSG trademark | (2) | (9) |
| Marketing data, publicity and subscriptions | (9) | (10) |
| Net overheads allocated from other CS group entities | (180) | (266) |
| Non income taxes | (8) | (8) |
| Other | (82) | (63) |
| **General and administrative expenses** | **(578)** | **(702)** |

During 2011 the UK Government introduced a new levy, the UK Bank Levy, for all Banks and Banking groups operating in the UK. The Levy is charged on a firm's liabilities as at the statement of financial position date (i.e. 31 December 2014) at a rate of 15.6 basis points for all short-term liabilities and 7.8 basis points for long-term liabilities. Under current accounting requirements (IFRIC 21), the Bank Levy charge will only be recognised in the financial statements on 31 December each year. The estimate for the liability in respect of 2014 is USD 56 million (2013: USD 57 million).

## 10. Net Gains from Financial Assets/Liabilities at Fair Value Through Profit or Loss

| | Six month period ended 30 June 2014 | Six month period ended 30 June 2013 |
|---|---|---|
| **Net gains from financial assets/liabilities designated at fair value through profit or loss (USD million)** | | |
| Interest rate | 3,820 | 27 |
| Foreign exchange | (2,911) | 1,037 |
| Equity | 37 | (114) |
| Commodity | 79 | 538 |
| Credit | (67) | 192 |
| Other | 77 | 50 |
| **Total net gains from financial assets/liabilities at fair value through profit or loss** | **1,035** | **1,730** |

## 11. Income Tax

| | Six month period ended 30 June 2014 | Six month period ended 30 June 2013 |
|---|---|---|
| **Income tax (USD million)** | | |
| Current tax | (1) | - |
| Deferred tax | (471) | (67) |
| **Income tax charge** | **(472)** | **(67)** |

The income tax charge for the period can be reconciled to the profit per the Condensed Consolidated Interim Statement of Comprehensive Income as follows:

| | Six month period ended 30 June 2014 | Six month period ended 30 June 2013 |
|---|---|---|
| **Income tax reconciliation (USD million)** | | |
| Profit before tax | 101 | 453 |
| Profit before tax multiplied by the UK statutory rate of corporation tax of 21.49% (2013: 23.25%) | (22) | (106) |
| Effect of deferred tax resulting from changes to tax rates | (7) | - |
| Other permanent differences | 8 | 38 |
| Adjustments to current tax in respect of previous periods | - | 1 |
| Adjustments to deferred tax in respect of previous periods | (1) | - |
| Impairment of deferred tax asset | (450) | - |
| **Income tax charge** | **(472)** | **(67)** |

The UK corporation tax rate reduced from 23% to 21% with effect from 1 April 2014. Furthermore, the UK corporation tax rate will reduce from 21% to 20% with effect from 1 April 2015.

## 12. Deferred Tax Asset

| | Balance as at 1 January 2014 | Debit to income for the period | Effect of change in tax rate | Balance as at 30 June 2014 |
|---|---|---|---|---|
| **(USD million)** | | | | |
| Deferred tax asset | 973 | (464) | (7) | 502 |
| **Deferred tax asset** | | | | |

| | Balance as at 1 January 2013 | Debit to income for the period | Effect of change in tax rate | Balance as at 31 Dec 2013 |
|---|---|---|---|---|
| **(USD million)** | | | | |
| Deferred tax asset | 1,450 | (290) | (187) | 973 |
| **Deferred tax asset** | | | | |

Deferred taxes are calculated on all temporary differences under the liability method using an effective tax rate of 20% (June 2013: 23%).

Deferred tax assets ('DTA') and liabilities are recognised for the estimated future tax effects of operating loss carry-forwards and temporary differences between the carrying amounts of existing assets and liabilities and their respective tax bases at the Statement of Financial Position date. The realisation of DTA on temporary differences is dependent upon the generation of taxable income in future accounting periods after those temporary differences become deductible. The realisation of DTA on net operating losses is dependent upon the generation of future taxable income. Management regularly evaluates whether DTA can be realised and if not makes an impairment.

In evaluating whether DTA can be realised, management considers both positive and negative evidence, including projected future taxable income, the scheduled reversal of deferred tax liabilities and tax planning strategies. This evaluation requires significant management judgement, primarily with respect to projected taxable income, also taking into account the history of recent losses of the Bank (primarily arising from the financial crisis that started in late 2008 and thereafter). The future taxable income can never be predicted with certainty, but management also evaluated the factors contributing to the losses and considered whether or not they are temporary or indicate an expected permanent decline in earnings. The evaluation is derived from budgets and strategic business plans but is dependent on numerous factors, some of which are beyond management's control, such as the fiscal and regulatory environment and external economic growth conditions. Substantial variance of actual results from estimated future taxable profits, or changes in CSi group's estimate of future taxable profits and potential restructurings, could lead to changes in the amount of DTA that is realisable, or considered realisable, and would require a corresponding adjustment to the level of recognised DTA.

As a consequence of this evaluation, it was considered that the DTA should be impaired by a further USD 450 million in the period (31 December 2013: USD 319 million). The Bank's assessment is that remaining recognised trading losses carried forward should be utilised within a period of 4 years. If strategies and business plans significantly deviate in the future from current management assumptions, the current level of deferred tax assets may need to be adjusted if full recovery of the remaining DTA balance is no longer probable.

## 13. Trading Financial Assets and Liabilities at Fair Value Through Profit or Loss

| | 30 June 2014 | 31 December 2013 (restated)[1] |
|---|---|---|
| **Trading financial assets at fair value through profit or loss (USD million)** | | |
| Debt securities | 25,497 | 31,046 |
| Equity securities | 14,284 | 12,060 |
| Derivative instruments | 344,494 | 355,251 |
| Other | 3,010 | 2,558 |
| **Trading financial assets at fair value through profit or loss** | **387,285** | **400,915** |

| | 30 June 2014 | 31 December 2013 (restated)[1] |
|---|---|---|
| **Trading financial liabilities at fair value through profit or loss (USD million)** | | |
| Short positions | 9,170 | 8,439 |
| Derivative instruments | 355,866 | 364,892 |
| Other | 76 | 18 |
| **Total trading financial liabilities at fair value through profit or loss** | **365,112** | **373,349** |

[1] On 1 January 2014, the CSi group adopted amendments to IAS 32 "Offsetting Financial Assets and Financial Liabilities" (IAS 32). Comparative information has been restated accordingly (See Note 2).

## 14. Long Term Debt

| | Balance as at 1 January 2014 | Issuances | Repayments and other movements | Translation FX and Interest movements | Balance as at 30 June 2014 |
|---|---|---|---|---|---|
| **Long term debt (USD million)** | | | | | |
| Senior debt | 11,730 | 9,738 | (16) | (229) | 21,223 |
| Subordinated debt | 9,713 | - | (1,398) | 59 | 8,374 |
| **Total Long Term Debt** | **21,443** | **9,738** | **(1,414)** | **(170)** | **29,597** |

| | Balance as at 1 January 2013 | Issuances | Repayments and other movements | Translation, FX and Interest movements | Balance as at 31 December 2013 |
|---|---|---|---|---|---|
| **Long term debt (USD million)** | | | | | |
| Senior debt | 22,283 | 114 | (10,796) | 129 | 11,730 |
| Subordinated debt | 8,371 | 2,625 | (1,525) | 242 | 9,713 |
| **Total Long Term Debt** | **30,654** | **2,739** | **(12,321)** | **371** | **21,443** |

The increase in senior debt was principally as a result of a EUR 7 billion borrowing from a CS group company with a maturity of 400 days.

## 15. Derivatives

| 30 June 2014 | Gross Derivative Assets | Gross Derivative Liabilities |
|---|---|---|
| **Derivatives (USD million)** | | |
| Interest rate products | 450,315 | 440,390 |
| Foreign exchange products | 52,378 | 67,665 |
| Equity/indexed-related products | 32,386 | 34,525 |
| Credit products | 32,764 | 32,638 |
| Other products | 3,717 | 3,362 |
| **Total Derivative Instruments** | **571,560** | **578,580** |

| 31 December 2013 (restated)[1] | Gross Derivative Assets | Gross Derivative Liabilities |
|---|---|---|
| **Derivatives (USD million)** | | |
| Interest rate products | 509,122 | 502,411 |
| Foreign exchange products | 65,998 | 78,076 |
| Equity/indexed-related products | 36,172 | 37,416 |
| Credit products | 34,603 | 34,796 |
| Other products | 4,280 | 4,691 |
| **Total Derivative Instruments** | **650,175** | **657,390** |

[1] On 1 January 2014, the CSi group adopted amendments to IAS 32 "Offsetting Financial Assets and Financial Liabilities" (IAS 32). Comparative information has been restated accordingly (See Note 2).

## Offsetting of derivative instruments

| (USD Millions) CSi Group | 30 June 2014 Gross | Offsetting | Net | 31 December 2013 (restated)[1] Gross | Offsetting | Net |
|---|---|---|---|---|---|---|
| **Derivative Assets** | | | | | | |
| Derivative instruments subject to master netting agreements or similar agreements | 565,553 | (227,066) | 338,487 | 643,799 | (294,924) | 348,875 |
| Derivative instruments not subject to master netting agreements or similar agreements[2] | 6,007 | - | 6,007 | 6,376 | - | 6,376 |
| **Total derivative instruments presented in the consolidated Statement of Financial Position** | **571,560** | **(227,066)** | **344,494** | **650,175** | **(294,924)** | **355,251** |
| of which recorded in trading financial assets at fair value through profit or loss | 571,560 | (227,066) | 344,494 | 650,175 | (294,924) | 355,251 |
| **Derivative Liabilities** | | | | | | |
| Derivative instruments subject to master netting agreements or similar agreements | 571,489 | (222,714) | 348,775 | 648,593 | (292,498) | 356,095 |
| Derivative instruments not subject to master netting agreements or similar agreements[2] | 7,091 | - | 7,091 | 8,797 | - | 8,797 |
| **Total derivative instruments presented in the consolidated Statement of Financial Position** | **578,580** | **(222,714)** | **355,866** | **657,390** | **(292,498)** | **364,892** |
| of which recorded in trading financial liabilities at fair value through profit or loss | 578,580 | (222,714) | 355,866 | 657,390 | (292,498) | 364,892 |

[1] On 1 January 2014, the CSi group adopted amendments to IAS 32 "Offsetting Financial Assets and Financial Liabilities" (IAS 32). Comparative information has been restated accordingly (See Note 2).

[2] Represents derivative instruments where a legal opinion supporting the enforceability of netting in the event of default or termination under the agreement is not in place.

### PAF2 transaction

As part of the 2011 annual compensation process, certain employees were awarded a portion of their deferred variable compensation in the form of 2011 Partner Asset Facility ('PAF2') units. PAF2 awards were linked to a portfolio of CSG's credit exposures, providing risk offset and capital relief. Due to regulatory changes, this capital relief was no longer available after December 31, 2013. As a result, in March 2014 CSG terminated the PAF2 awards and exchanged them at fair value for other compensation awards in the form of one of the following options, or a combination thereof:

Capital Opportunity Facility: Participants elect for all or part of their PAF2 award to be referenced to a Capital Opportunity Facility ('COF'). The COF is a seven-year facility that is linked to the performance of a portfolio of risk-transfer and capital mitigation transactions chosen by the Partner Asset Facility management team. Participants who elect for the COF will receive distributions of 6.5% per annum until maturity;

Contingent Capital Awards: Participants elect to receive Contingent Capital Awards ('CCA'), with similar terms to the instruments used as part of the 2013 compensation awards. Settlement is expected to occur in early 2016, subject to regulatory approvals.

## 16. Other Assets and Other Liabilities

| | 30 June 2014 | 31 December 2013 (restated)[1] |
|---|---|---|
| **Other assets (USD million)** | | |
| Brokerage receivables | 3,961 | 4,608 |
| Interest and fees receivable | 221 | 196 |
| **Cash collateral on derivative instruments** | | |
| ▪ Banks | 25,720 | 15,342 |
| ▪ Customers | 18,169 | 19,334 |
| Other | 227 | 193 |
| **Other assets** | **48,298** | **39,673** |

| | 30 June 2014 | 31 December 2013 (restated)[1] |
|---|---|---|
| **Other liabilities (USD million)** | | |
| Brokerage payables | 1,212 | 1,250 |
| Interest and fees payable | 812 | 943 |
| **Cash collateral on derivative instruments** | | |
| ▪ Banks | 16,069 | 16,308 |
| ▪ Customers | 14,178 | 12,302 |
| Failed sales | 48 | 69 |
| Share-based compensation liability | 97 | 147 |
| Other | 558 | 8,407 |
| **Other liabilities** | **32,974** | **39,426** |

[1] On 1 January 2014, the CSi group adopted amendments to IAS 32 "Offsetting Financial Assets and Financial Liabilities" (IAS 32). Comparative information has been restated accordingly (See Note 2).

## 17. Called-up Share Capital and Share Premium

| | 30 June 2014 | 31 December 2013 |
|---|---|---|
| **Allotted, called up and fully paid share capital (USD)** | | |
| Ordinary voting shares of USD 0.1 each | 13 | 13 |
| Participating non-voting shares of USD 0.1 each | 13,107,655,992 | 13,107,655,992 |
| | 13,107,656,005 | 13,107,656,005 |

| | 30 June 2014 | 31 December 2013 |
|---|---|---|
| **Share Premium (USD)** | | |
| Opening balance | 12,698,984,345 | 12,698,984,345 |
| **Closing balance** | **12,698,984,345** | **12,698,984,345** |

The Ordinary Shares carry voting rights but do not carry the right to receive dividends.

The Participating Shares do not carry voting rights but carry the right to receive dividends. In all other respects the Participating Shares and the Ordinary Shares rank pari passu.

## 18. Contingent Liabilities and Commitments

The Bank is party to various legal proceedings as part of its normal course of business. The Directors of the Bank believe that the aggregate liability, if any, resulting from these proceedings will not materially prejudice the financial position of the Bank and have been provided for where deemed necessary and in accordance with accounting policy.

In July 2013, the Directorate General for Competition of the European Commission ('DG Comp') issued a Statement of Objections ('SO') to various entities of thirteen CDS dealer banks, certain Markit entities and the International Swaps and Derivatives Association, Inc. ('ISDA') in relation to its investigation into possible violations of competition law by certain CDS market participants. Certain Credit Suisse entities were among the named bank entities, including CSi. The SO marks the commencement of enforcement proceedings in respect of what DG Comp alleges were unlawful attempts to prevent the development of exchange traded platforms for CDS between 2006 and 2009. The next step in the process is for the named entities to provide written responses. In addition, certain Credit Suisse entities, as well as other banks, have been named in civil litigation in the US. Further, Credit Suisse (USA), Inc. has received civil investigative demands from the United States Department of Justice.

CSi is the defendant in English court litigation brought by Rosserlane Consultants Limited and Swinbrook Developments Limited (the "claimants"). The litigation relates to the forced sale by CSi in 2008 of Caspian Energy Group LP ('CEG'), the vehicle through which the claimants held a 51% stake in the Kyurovdag oil and gas field in Azerbaijan. CEG was sold for USD 245 million following two unsuccessful M&A processes. The claimants allege that CEG should have been sold for at least USD 700 million. CSi will be vigorously defending the claims, which it believes are without merit. The trial is fixed to commence in October 2014.

On 16 June 2014 the UK Financial Conduct Authority imposed a financial penalty of GBP 2,398,100 against CSi in respect of inadequacies relating to the prominence of the maximum return and the explanation of the early exit fee in certain financial promotions for capital protected structured deposit products sold to UK retail customers between November 2009 and June 2012. CSi is also required to conduct a past business review (in conjunction with distributors of the products) under which affected retail customers will be eligible to claim compensation. The Issuer does not believe that the likely costs of the past business review will materially impact its financial position.

## 19. Related Party

CSi group is controlled by Credit Suisse Group AG, its ultimate parent, which is incorporated in Switzerland. CSi's parent company, who holds a majority of the voting rights in the undertaking, is Credit Suisse AG, which is also incorporated in Switzerland.

The CSi group has significant related party balances with subsidiaries and affiliates of CSG. These transactions largely comprise derivative trades, as the Bank is the principal risk taker for derivatives within the CS group, as well as funding trades via the use of loans/deposits and repurchase/resale agreements. The CSi group is also charged by other CS group companies for operating costs which mainly relate to employee-related services and other business expenses.

The CSi group generally enters into the above transactions in the ordinary course of business on market terms that could be obtained from unrelated parties.

The nature of related party transactions remained consistent for the six months ended 30 June 2014 compared to the year ended 31 December 2013.

## 20. Financial Instruments Risk Position

The CS group, of which the CSi group is a part, manages its risks under global policies. The CS group risk management process is designed to ensure that there are sufficient controls to measure, monitor and control risks in accordance with CS group's control framework and in consideration of industry best practices. The primary responsibility for risk management lies with CS group's senior business line managers. They are held accountable for all risks associated with their businesses, including counterparty risk, market risk, liquidity risk, operational risk, legal risk and reputation risk.

There have been no material changes in the risk management policies since the year ended 31 December 2013.

### Development of trading portfolio risks

The table below shows the trading related market risk exposure for the CSi group, as measured by ten-day 99% Value at Risk ('VaR'). The VaR in the table has been calculated using a three-year historical dataset. VaR estimates are computed separately for each risk type and for the whole portfolio using the historical simulation methodology. The diversification benefit reflects the net difference between the sum of the 99th percentile loss for each individual risk type and for the total portfolio. There is no material difference in VaR between the Bank and the CSi group.

| Ten-day, 99% VaR – trading portfolios | Interest rate and credit spread | Foreign exchange | Commodity | Equity | Diversification benefit[1] | Total |
|---|---|---|---|---|---|---|
| **30 June 2014 (USD million)** | | | | | | |
| Average | 80 | 21 | 6 | 19 | (81) | 45 |
| Minimum | 35 | 12 | 2 | 12 | - | 33 |
| Maximum | 140 | 74 | 14 | 28 | - | 69 |
| End of period | 57 | 18 | 10 | 24 | (63) | 46 |
| **31 December 2013 (USD million)** | | | | | | |
| Average | 73 | 17 | 8 | 21 | (62) | 57 |
| Minimum | 34 | 6 | 2 | 11 | - | 26 |
| Maximum | 124 | 43 | 19 | 86 | - | 113 |
| End of period | 35 | 15 | 6 | 21 | (39) | 38 |

1) VaR estimates are calculated separately for each risk type and for the whole portfolio using the historical simulation methodology. Diversification benefit reflects the net difference between the sum of the 99% percentile loss.
2) As the minimum and maximum occur on different days for different risk types, it is not meaningful to calculate a portfolio diversification benefit.

### VaR results

The Bank's ten-day, 99% regulatory VaR as of 30 June 2014 was USD 46 million (31 December 2013: USD 38 million).

Various techniques are used to assess the accuracy of the VaR model used for trading portfolios, including back testing. In line with industry practice, the Bank presents back testing using actual daily trading revenues. Actual daily trading revenues are compared with VaR calculated using a one-day holding period. A back testing exception occurs when the daily loss exceeds the daily VaR estimate.

### Interest rate sensitivity position in the non-trading portfolio

Interest rate risk on non-trading positions is shown below using sensitivity analysis that estimates the potential change in value resulting from defined changes in interest rate yield curves. The impact of a one-basis-point parallel increase in yield curves on the fair value of interest rate-sensitive non-trading book positions would have been an increase of USD 1.2 million as of 30 June 2014 compared to USD 1.1 million as of 31 December 2013. Non-trading interest rate risk is assessed using other measures including the potential value change resulting from a significant change in yield curves. As of 30 June 2014, the fair value impacts of 200-basis-point move in yield curves (flooring at zero where appropriate) was:

+200bps increase of USD 245 million (31 December 2013: USD 205 million)

-200bps decrease of USD 159 million (31 December 2013: USD 155 million)

The fair value impact of a statistical one-year, 99% adverse change in yield curves was a decrease of USD 183 million (31 December 2013: USD 73 million). Both measures are significantly below the 20% threshold used by regulators to identify firms that potentially run excessive levels of non-trading interest rate risk.

### Net Counterparty Exposure before Collateral by Internal Rating

| | 30 June 2014 | | 31 December 2013 | |
|---|---|---|---|---|
| | USD million | % | USD million | % |
| AAA | 2,654 | 4 | 2,725 | 4 |
| AA+ to AA- | 14,866 | 22 | 14,605 | 22 |
| A+ to A- | 19,703 | 29 | 20,588 | 30 |

## 21. Financial Instruments

The disclosure of the CSi group's financial instruments below includes the following sections:

- Analysis of financial instruments by categories;
- Fair value measurement (including fair value hierarchy; transfers between levels; level 3 reconciliation; qualitative and quantitative disclosures of valuation techniques; sensitivity analysis of unobservable input parameters; and recognition of trade date profit);

## Analysis of financial instruments by categories

Financial instruments are measured on an ongoing basis either at fair value or at amortised cost. The following table sets out the carrying amounts and fair values of the CSi group's financial instruments.

## Financial assets and liabilities by categories

### As at 30 June 2014

| Financial assets (USD million) | Carrying value: Total carrying value | Held for trading | Designated at fair value | Loans and receivables | Other amortised cost | Total fair value |
|---|---|---|---|---|---|---|
| Cash and due from banks | **20,567** | - | - | - | 20,567 | 20,567 |
| Interest-bearing deposits with banks | **7,680** | - | - | - | 7,680 | 7,680 |
| Securities purchased under resale agreements and securities borrowing transactions | **32,440** | - | - | - | 32,440 | 32,440 |
| Trading financial assets at fair value through profit or loss | **387,285** | 387,285 | - | - | - | 387,285 |
| Financial assets designated at fair value through profit or loss | **18,303** | - | 18,303 | - | - | 18,303 |
| Other loans and receivables | **4,363** | - | - | 4,363 | - | 4,363 |
| Other investments | **32** | - | - | - | 32 | 32 |
| Other assets | **48,298** | - | - | - | 48,298 | 48,298 |
| **Total financial assets** | **518,968** | **387,285** | **18,303** | **4,363** | **109,017** | **518,968** |
| **Financial liabilities (USD million)** | | | | | | |
| Deposits | **5,195** | - | - | - | 5,195 | 5,195 |
| Securities sold under repurchase agreements and securities lending transactions | **7,837** | - | - | - | 7,837 | 7,837 |

[1] On 1 January 2014, the CSi group adopted amendments to IAS 32 "Offsetting Financial Assets and Financial Liabilities" (IAS 32). Comparative information has been restated accordingly (See Note 2).

## Fair value measurement

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction in the principal (or most advantageous) market at the measurement date. A significant portion of the CSi group's financial instruments are carried at fair value. Deterioration of financial markets could significantly impact the fair value of these financial instruments and the results of operations.

The fair value of the majority of the CSi group's financial instruments is based on quoted prices in active markets or observable inputs. These instruments include government and agency securities, certain commercial papers ('CP'), most investment grade corporate debt, certain high yield debt securities, exchange-traded and certain OTC derivative instruments and most listed equity securities.

In addition, the CSi group holds financial instruments for which no prices are available and which have little or no observable inputs. Further deterioration of financial markets could significantly impact the value of these financial instruments and the results of operations. For these instruments, the determination of fair value requires subjective assessment and varying degrees of judgment, depending on liquidity, concentration, pricing assumptions, the current economic and competitive environment and the risks affecting the specific instrument. In such circumstances, valuation is determined based on management's own assumptions about the assumptions that market participants would use in pricing the asset or liability, including assumptions about risk. These instruments include certain OTC derivatives, including equity and credit derivatives, certain corporate equity-linked securities, mortgage-related and Collateralised Debt Obligation ('CDO') securities, private equity investments, certain loans and credit products, including leveraged finance, certain syndicated loans and certain high yield bonds.

The fair value of financial assets and liabilities is impacted by factors such as benchmark interest rates, prices of financial instruments issued by third parties, commodity prices, foreign exchange rates and index prices or rates. In addition, valuation adjustments are an integral part of the valuation process when market prices are not indicative of the credit quality of a counterparty, and are applied to both OTC derivatives and debt instruments. The impact of changes in a counterparty's credit spreads (known as credit valuation adjustments) is considered when measuring the fair value of assets and the impact of changes in the CSi group's own credit spreads (known as debit valuation adjustments) is considered when measuring the fair value of its liabilities. For OTC derivatives, the impact of changes in both the CSi group's and the counterparty's credit standing is considered when measuring their fair value, based on current Credit Default Swap ('CDS') prices. The adjustments also take into account contractual factors designed to reduce the CSi group's credit exposure to counterparty, such as collateral held and master netting agreements. For hybrid debt instruments with embedded derivative features, the impact of changes in the CSi group's credit standing is considered when measuring their fair value, based on current funded debt spreads.

IFRS 13 permits a reporting entity to measure the fair value of a group of financial assets and financial liabilities on the basis of the price that would be received to sell a net long position or paid to transfer a net short position for a particular risk exposure in an orderly transaction between market participants at the measurement date. This is consistent with industry practice. As such, the CSi group applies bid and offer adjustments to net portfolios of cash securities and/or derivative instruments to adjust the value of the net position from a mid-market price to the appropriate bid or offer level that would be realised under normal market conditions for the net long or net short position for a specific market risk. In addition, the CSi group reflects the net exposure to credit risk for its derivative instruments where the CSi group has legally enforceable agreements with its counterparties that mitigate credit risk exposure in the event of default. Valuation adjustments are recorded in a reasonable and consistent manner that results in an allocation to the relevant disclosures in the notes to the financial statements as if the valuation adjustment had been allocated to the individual unit of account.

## Fair value hierarchy

The financial instruments carried at fair value were categorised under the three levels of the fair value hierarchy as follows:

- Level 1: Quoted market prices (unadjusted) in active markets for identical assets or liabilities that the CSi group has the ability to access. This level of the fair value hierarchy provides the most reliable evidence of fair value and is used to measure fair value whenever available.
- Level 2: Inputs other than quoted prices included within level 1 that are observable for the asset or liability, either directly or indirectly. These inputs include: (i) quoted prices for similar assets or liabilities in active markets; (ii) quoted prices for identical or similar assets or similar liabilities in markets that are not active, that is, markets in which there are few transactions for the asset and liability, the prices are not current or price quotations vary substantially either over time or among market makers, or in which little information is publicly available; (iii) inputs other than quoted prices that are observable for the asset or liability; or (iv) inputs that are derived principally from or corroborated by observable market data by correlation or other means.
- Level 3: Inputs for the asset or liability that are not based on observable market date (significant unobservable inputs). These inputs reflect the CSi group's own assumptions about the assumptions that market participants would use in pricing the asset or liability (including assumptions about risk). These inputs are developed based on the best information available in the circumstances, which includes the CSi group's own data. The CSi group's own data used to develop unobservable inputs is adjusted if information indicates that market participants would use different assumptions.

## Fair value of assets and liabilities measured at fair value on a recurring basis

| 30 June 2014 | Level 1 | Level 2 | Level 3 | Impact of netting[2] | Total at fair value |
|---|---|---|---|---|---|
| **Assets (USD million)** | | | | | |
| **Debt securities** | **9,988** | **14,317** | **1,192** | **-** | **25,497** |

[2] Derivative contracts are reported on a gross basis by level. The impact of netting represents an adjustment related to counterparty netting.

## Transfers between Level 1 and Level 2

The table below shows the transfers from Level 1 to Level 2 of the fair value hierarchy.

| | 30 June 2014 | | 31 December 2013 | |
|---|---|---|---|---|
| **Assets (USD million)** | **Transfers out of level 1 to level 2** | **Transfers to level 1 out of level 2** | **Transfers out of level 1 to level 2** | **Transfers to level 1 out of level 2** |
| Trading financial assets at fair value through profit or loss | 1 | 4,559 | 23 | 4,962 |
| **Total transfers in assets at fair value** | **1** | **4,559** | **23** | **4,962** |
| | | | | |
| **Liabilities (USD million)** | | | | |
| Trading financial liabilities at fair value through profit or loss | 17 | 4,524 | 1 | 3,918 |
| **Total transfers in liabilities at fair value** | **17** | **4,524** | **1** | **3,918** |

The transfers from Level 1 to Level 2 were mainly driven by debt/equity securities where the liquidity had decreased and subsequently lacked pricing transparency. All transfers were reported at the end of the reporting period.

The transfers from Level 2 to Level 1 are mainly driven by the transfer of exchange traded options as they moved closer to maturity and inputs became observable. All transfers were reported at the end of the reporting period.

### Movements of level 3 instruments

The following table presents a reconciliation of financial instruments categorised in level 3 of the fair value hierarchy.

## Assets and liabilities measured at fair value on a recurring basis for level 3

| As at 30 June 2014 | | | | | | | | Trading revenues | | |
|---|---|---|---|---|---|---|---|---|---|---|
| | Balance at beginning of period | Transfers in | Transfers out | Purchases | Sales | Issuances | Settlements | On transfers in/out[1] | On all other | Balance at end of period |
| **Assets at fair value (USD million)** | | | | | | | | | | |
| **Debt securities** | **1,562** | **114** | **(376)** | **630** | **(984)** | **-** | **-** | **8** | **238** | **1,192** |
| of which foreign governments | 256 | 16 | (238) | - | (14) | - | - | 4 | (2) | 22 |
| of which corporates | 1,187 | 98 | (138) | 630 | (970) | - | - | 4 | 244 | 1,055 |
| of which commercial mortgage backed securities | 119 | - | - | - | - | - | - | - | (4) | 115 |
| of which collateral debt obligations | - | - | - | - | - | - | - | - | - | - |

| **Total changes in unrealised gains/(losses) relating to assets and liabilities still held as of the reporting date** | **(722)** | (776) |

## Transfers in and out of level 3

### Trading financial assets at fair value through profit or loss

Trading financial assets transferred into and out of level 3 as at 30 June 2014 amounted to USD 843 million and USD (1,206) million, respectively. USD 664 million of transfers into level 3 were related to credit derivatives and loans included in Other. Transfers out of level 3 largely comprised of credit and equity/index-related derivatives.

Trading financial assets transferred into and out of level 3 in 2013 amounted to USD 2,835 million and USD (2,934) million, respectively. USD 1,801 million of transfers into level 3 were related to credit derivatives and loans included in Other. Transfers out of level 3 comprised of debt securities, credit derivatives, equity/index-related derivatives and loans included in Other.

### Financial assets designated at fair value through profit or loss

Financial assets designated at fair value through profit or loss transferred out of level 3 as at 30 June 2014 amounted to USD (48) million. These transfers were related to real estate loans.

Financial assets designated at fair value through profit or loss transferred into and out of level 3 in 2013 amounted to USD 127 million and USD (142) million, respectively. Both these amounts of transfers were related to loans.

### Trading financial liabilities at fair value through profit or loss

Trading financial liabilities transferred into and out of level 3 as at 30 June 2014 amounted to USD 438 million and USD (668) million, respectively. USD 296 million of transfers into level 3 were related to credit derivatives. Transfers out of level 3 largely comprised of equity/index-related derivatives and credit derivatives.

Trading financial liabilities transferred into and out of level 3 as at 31 December 2013 amounted to USD 1,390 million and USD (1,440) million, respectively. USD 1,097 million of transfers into level 3 were related to credit derivatives. Transfers out of level 3 largely comprised of equity/index-related derivatives and credit derivatives.

### Financial liabilities designated at fair value through profit or loss

Financial liabilities designated at fair value through profit or loss transferred into and out of level 3 as at 30 June 2014 amounted to USD 93 million and USD (743) million, respectively. The transfers into level 3 were related to failed sales. The transfers out of level 3 were largely related to structured notes.

Financial liabilities designated at fair value through profit or loss transferred into and out of level 3 as at 31 December 2013 amounted to USD 228 million and USD (52) million, respectively. These were largely related to structured notes.

**Qualitative disclosures of valuation techniques**

The CSi group has implemented and maintains a valuation control framework, which is supported by policies and procedures that define the principles for controlling the valuation of the CSi group's financial instruments. Product Control and Risk Management create, review and approve significant valuation policies and procedures. The framework includes three main internal processes: (i) valuation governance; (ii) independent price verification and significant unobservable inputs review; and (iii) a cross-functional pricing model review. Through this framework, the CSi group determines the reasonableness of the fair value of its financial instruments.

On a monthly basis, meetings are held for each business line with senior representatives of the Front Office and Product Control to discuss independent price verification results, valuation adjustments, and other significant valuation issues. On a quarterly basis, a review of significant changes in the fair value of financial instruments is undertaken by Product Control and conclusions are reached regarding the reasonableness of those changes. Additionally, on a quarterly basis, meetings are held for each business line with senior representatives of the Front Office, Product Control, Risk Management, and Financial Accounting to discuss independent price verification results, valuation issues, business and market updates, as well as a review of significant changes in fair value from the prior quarter, significant unobservable inputs and prices used in valuation techniques, and valuation adjustments.

The results of these meetings are aggregated for presentation to the Valuation and Risk Management Committee ('VARMC') and the Audit Committee. The VARMC, which is comprised of Credit Suisse Group AG's Executive Board members and the heads of the business and control functions, meets to review and ratify valuation review conclusions, and to resolve significant valuation issues for the CSi group. Oversight of the valuation control framework is through specific and regular reporting on valuation directly to the Credit Suisse Group AG's Executive Board through the VARMC.

One of the key components of the governance process is the segregation of duties between the Front Office and Product Control. The Front Office is responsible for measuring inventory at fair value on a daily basis, while Product Control is responsible for independently reviewing and validating those valuations on a periodic basis. The Front Office values the inventory using, wherever possible, observable market data which may include executed transactions, dealer quotes, or broker quotes for the same or similar instruments. Product Control validates this inventory using independently sourced data that also includes executed transactions, dealer quotes, and broker quotes.

Product Control utilises independent pricing service data as part of their review process. Independent pricing service data is analysed to ensure that it is representative of fair value including confirming that the data corresponds to executed transactions or executable broker quotes, review and assessment of contributors to ensure they are active market participants, review of statistical data and utilisation of pricing challenges. The analysis also includes understanding the sources of the pricing service data and any models or assumptions used in determining the results. The purpose of the review is to judge the quality and reliability of the data for fair value measurement purposes and its appropriate level of usage within the Product Control independent valuation review.

For certain financial instruments the fair value is estimated in full or in part using valuation techniques based on assumptions that are not supported by market observable prices, rates, or other inputs. In addition, there may be uncertainty about a valuation, which results from the choice of valuation technique or model used, the assumptions embedded in those models, the extent to which inputs are not market observable, or as a consequence of other elements affecting the valuation technique or model. Model calibration is performed when significant new market information becomes available or at a minimum on a quarterly basis as part of the business review of significant unobservable inputs for level 3 instruments. For models that have been deemed to be significant to the overall fair value of the financial instrument, model validation is performed as part of the periodic review of the related model.

The CSi group performs a sensitivity analysis of its significant level 3 financial instruments. This sensitivity analysis estimates a fair value range by changing the related significant unobservable inputs value. Where a model-based technique is used to determine the fair value of the level 3 financial instrument, an alternative input value is utilised to derive an estimated fair value range. Where a price-based technique is used to determine the fair value of the level 3 financial instrument, Front Office professional judgment is used to estimate a fair value range.

The following information on the valuation techniques and significant unobservable inputs of the various financial instruments, and the sensitivity of fair value measurements to changes in significant unobservable inputs, should be read in conjunction with the table "Quantitative disclosure of valuation techniques".

### Central bank funds sold, securities purchased under resale agreements and securities borrowing transactions

Securities purchased under resale agreements and securities sold under repurchase agreements are measured at fair value using discounted cash flow analysis. Future cash flows are discounted using observable market interest rate repurchase/resale curves for the applicable maturity and underlying collateral of the instruments. As such, the significant majority of both securities purchased under resale agreements and securities sold under repurchase agreements are included in level 2 of the fair value hierarchy. Structured resale and repurchase agreements include embedded derivatives, which are measured using the same techniques as described below for stand-alone derivative contracts held for trading purposes or used in hedge accounting relationships. If the value of the embedded derivative is determined using significant unobservable inputs, those structured resale and repurchase agreements are classified within level 3 of the fair value hierarchy. The significant unobservable input for those classified as level 3 is funding spread.

Securities purchased under resale agreements are usually fully collateralised or over collateralised by government securities, money market instruments, corporate bonds or other debt instruments. In the event of counterparty default, the collateral service agreement provides the Group with the right to liquidate the collateral held

### Debt securities

### Foreign governments and corporates

Government debt securities typically have quoted prices in active markets and are categorised as level 1 instruments. For debt securities for which market prices are not available, valuations are based on yields reflecting credit rating, historical performance, delinquencies, loss severity, the maturity of the security, recent transactions in the market or other modeling techniques, which may involve judgment. Those securities where the significant price or model inputs are observable in the market are categorised as level 2 instruments, while those securities where prices are not observable and significant model inputs are unobservable are categorised as level 3 of the fair value hierarchy.

Corporate bonds are priced to reflect current market levels either through recent market transactions or broker or dealer quotes. Where a market price for the particular security is not directly available, valuations are obtained based on yields reflected by other instruments in the specific or similar entity's capital structure and adjusting for differences in seniority and maturity, benchmarking to a comparable security where market data is available (taking into consideration differences in credit, liquidity and maturity), or through the application of cash flow modeling techniques utilising observable inputs, such as current interest rate curves and observable CDS spreads. Significant unobservable inputs may include price, buyback probability, correlation, volatility and credit spread. For securities using market comparable price, the differentiation between level 2 and level 3 is based upon the relative significance of any yield adjustments as well as the accuracy of the comparison characteristics (i.e., the observable comparable security may be in the same country but a different industry and may have a different seniority level – the lower the comparability the more likely the security will be level 3). Generally, the interrelationship between volatility and correlation is positively correlated.

### CMBS securities

Fair values of CMBS may be available through quoted prices, which are often based on the prices at which similarly structured and collateralised securities trade between dealers and to and from customers. Fair values of CMBS for which there are significant unobservable inputs are valued using capitalisation rate. Price may not be observable for fair value measurement purposes for many reasons, such as the length of time since the last executed transaction for the related security, use of a price from a similar instrument, or use of a price from an indicative quote. Prices from similar observable instruments are used to calculate implied inputs which are then used to value unobservable instruments using discounted cash flow. The discounted cash flow price is then compared to the unobservable prices and assessed for reasonableness.

### Equity securities

The majority of the CSi group's positions in equity securities are traded on public stock exchanges for which quoted prices are readily and regularly available and are therefore categorised as level 1 instruments. Level 2 and level 3 equities include fund-linked products, convertible bonds or equity securities with restrictions that are not traded in active markets. Significant unobservable inputs may include earnings before interest, taxes, depreciation and amortisation, ('EBITDA') multiple, discount rate and capitalisation rate.

### Derivatives

Derivatives held for trading purposes or used in hedge accounting relationships include both OTC and exchange-traded derivatives. The fair values of exchange-traded derivatives measured using observable exchange prices are included in level 1 of the fair value hierarchy. For exchange-traded derivatives where the market is not considered active, the observable exchange prices may not be considered executable at the reporting date. These derivatives are valued in the same manner as similar observable OTC derivatives and are included in level 2 of the fair value hierarchy. If the similar OTC derivative used for valuing the exchange-traded derivative is not observable, than the exchange-traded derivative is included in level 3 of the fair value hierarchy.

The fair values of OTC derivatives are determined on the basis of either industry standard models or internally developed proprietary models. Both model types use various observable and unobservable inputs in order to determine fair value. The inputs include those characteristics of the derivative that have a bearing on the economics of the instrument. The determination of the fair value of many derivatives involves only a limited degree of subjectivity because the required inputs are observable in the marketplace, while more complex derivatives may use unobservable inputs that rely on specific proprietary modeling assumptions. Where observable inputs (prices from exchanges, dealers, brokers or market consensus data providers) are not available, attempts are made to infer values from observable prices through model calibration (spot and forward rates, mean reversion, benchmark interest rate curves and volatility inputs for commonly traded option products). For inputs that cannot be derived from other sources, estimates from historical data may be made. OTC derivatives where the majority of the value is derived from market observable inputs are categorised as level 2 instruments, while those where the majority of the value is derived from unobservable inputs are categorised as level 3 of the fair value hierarchy.

Our valuation of derivatives does not include an adjustment for the cost of funding uncollateralised OTC derivatives due to a lack of clear observability in the marketplace.

### Interest rate derivatives

OTC vanilla interest rate products, such as interest rate swaps, swaptions, and caps and floors are valued by discounting the anticipated future cash flows. The future cash flows and discounting are derived from market standard yield curves and industry standard volatility inputs. Where applicable, exchange-traded prices are also used to value exchange-traded futures and options and can be used in yield curve construction. For more complex products, inputs include, but are not limited to correlation, volatility, volatility skew, prepayment rate, credit spread, basis spread, recovery rate and mean reversion.

### Foreign exchange derivatives

Foreign exchange derivatives include vanilla products such as spot, forward and option contracts where the anticipated discounted future cash flows are determined from foreign exchange forward curves and industry standard optionality modeling techniques. Where applicable, exchange-traded prices are also used for futures and option prices. For more complex products inputs include, but are not limited to prepayment rate, correlation, volatility, volatility skew, mean reversion and credit spread.

### Equity and index-related derivatives

Equity derivatives include vanilla options and swaps in addition to different types of exotic options. Inputs for equity derivatives can include correlation, volatility, skew and buyback probability. Generally, volatility, forward skewand correlation are positively correlated.

### Credit derivatives

Credit derivatives include index and single name CDSs in addition to more complex structured credit products. Vanilla products are valued using industry standard models and inputs that are generally market observable including credit spread and recovery rate.

Complex structured credit derivatives are valued using proprietary models requiring unobservable inputs such as recovery rate, credit spread, correlation, funding spread and prepayment rate. These inputs are generally implied from available market observable data. Fair values determined by price may include discounted cash flow models using the inputs default rate, loss severity and discount rate.

### Other trading assets

Other trading assets primarily include loans and VAT receivables which are valued using market comparable price and discounted cash flow. The significant unobservable inputs of the fair value loans and VAT receivables is credit spread and market comparable price.

### Other investments

Private equity, hedge funds and other equity investments

Other equity investments principally includes equity investments in the form of a) direct investments in third-party hedge funds, private equity funds and funds of funds, b) equity-method investments where the Group has the ability to significantly influence the operating and financial policies of the investee, and c) direct investments in non-marketable equity securities.

Direct investments in third-party hedge funds, private equity funds and funds of funds are measured at fair value based on their published net asset values (NAVs). Most of these investments are classified as level 3 of the fair value hierarchy, as there are restrictions imposed upon the redemption of the funds at their NAV in the near term. In some cases, NAVs may be adjusted where there is sufficient evidence that the NAV published by the investment manager is not current with observed market movements, it is probable that these investments will be sold for an amount other than NAV or there exist other circumstances that would require an adjustment to the published NAV. Although rarely adjusted, significant judgment is involved in making any adjustments to the published NAVs.

Direct investments in non-marketable equity securities consist of both real estate investments and non-real estate investments. Equity-method investments and direct investments in non-marketable equity securities are initially measured at their transaction price, as this is the best estimate of fair value. Thereafter, these investments are individually measured at fair value based upon a number of factors that include any recent rounds of financing involving third-party investors, comparable company transactions, multiple analyses of cash flows or book values, or discounted cash flow analyses. Unobservable inputs may include credit spread, contingent probability and EBITDA multiple. The availability of information used in these modeling techniques is often limited and involves significant judgment in evaluating these different factors over time. As a result, these investments are included in level 3 of the fair value hierarchy.

### Life finance instruments

Life finance instruments include Single Premium Immediate Annuities (SPIA) and other premium finance instruments. Life finance instruments are valued using individual life expectancy rates and are typically obtained by multiplying a base mortality curve for the general insured population provided by a professional actuarial organisation together with an individual-specific multiplier. Individual-specific multipliers are determined based on data from third-party life expectancy data providers, which examine the insured individual's medical conditions, family history and other factors to arrive at a life expectancy estimate.

### Loans

The CSi group's loan portfolio which is measured at fair value primarily consists of commercial and industrial loans, loans to government and public institutions, and loans to financial institutions. These categories, include commercial loans, real estate loans, corporate loans, leverage finance loans and emerging market loans. Fair value is based on recent transactions and quoted prices, where available. Where recent transactions and quoted prices are not available, fair value may be determined by relative value benchmarking (which includes pricing based upon another position in the same capital structure, other comparable loan issues, generic industry credit spreads, implied credit spreads derived from CDS for the specific borrower, and enterprise valuations) or calculated based on the exit price of the collateral, based on current market conditions.

Both the funded and unfunded portion of revolving credit lines on the corporate lending portfolio are valued using a CDS pricing model, which requires estimates of significant inputs including credit spreads, recovery rates, credit conversion factors, and weighted average life of the loan. Significant unobservable inputs may include credit spread and price.

### Short-term borrowings and long-term debt

The CSi group's short-term borrowings and long-term debt include structured notes (hybrid financial instruments that are both bifurcatable and non-bifurcatable), funded derivatives and vanilla debt. The fair value of structured notes is based on quoted prices, where available. When quoted prices are not available, fair value is determined by using a discounted cash flow model incorporating the CSi group's credit spreads, the value of derivatives embedded in the debt and the residual term of the issuance based on call options. Derivatives structured into the issued debt are valued consistently with the CSi group's stand-alone derivative contracts held for trading purposes or used in hedge accounting relationships as discussed above. The fair value of structured debt is heavily influenced by the combined call options and performance of the underlying derivative returns. Significant unobservable inputs for long-term debt include buyback probability, gap risk, correlation, volatility, skew, credit spread and price. Generally, volatility, correlation and gap risk are positively correlated.

### Other financial liabilities designated at fair value through profit or loss

### Failed sales

These liabilities represent securitisations that do not meet the criteria for sale treatment under IFRS. Failed sales are valued in a manner consistent with the related underlying financial instruments.

### Sensitivity of fair value measurements to changes in significant unobservable inputs

For level 3 assets with a significant unobservable input of basis spread, buyback probability, prepayment rate, correlation, recovery rate, price, volatility, volatility skew, discount rate and contingent probability in general, an increase in the significant unobservable input would increase the fair value. For level 3 assets instruments with a significant unobservable input of funding spread, capitalisation rate and credit spread, in general, an increase in the significant unobservable input would decrease the fair value.

For level 3 liabilities, in general, an increase in the related significant unobservable inputs would have the inverse impact on fair value. An increase in the significant unobservable input gap risk would increase the fair value. An increase in the significant unobservable inputs mean reversion and skew would decrease the fair value.

### Interrelationships between significant unobservable inputs

Except as noted above, there are no material interrelationships between the significant unobservable inputs for the financial instruments. As the significant unobservable inputs move independently, generally an increase or decrease in one significant unobservable input will have no impact on the other significant unobservable inputs.

**Quantitative disclosures of valuation techniques**

The following tables provide the representative range of minimum and maximum values and the associated weighted average of each significant unobservable input for level 3 assets and liabilities by the related valuation technique most significant to the related financial instrument.

As at 30 June 2014

| USD million, except as indicated | Fair Value | Valuation technique | Unobservable input | Minimum value | Maximum value | Weighted average |

## Qualitative discussion of the ranges of significant unobservable inputs

The following sections provide further information about the ranges of significant unobservable inputs included in the tables above. The level of aggregation and diversity within the financial instruments disclosed in the tables above result in certain ranges of significant inputs being wide and unevenly distributed across asset and liability categories.

### Discount rate

The discount rate is the rate of interest used to calculate the present value of the expected cash flows of a financial instrument. There are multiple factors that will impact the discount rate for any given financial instrument including the coupon on the instrument, the term and the underlying risk of the expected cash flows. Two instruments of similar term and expected cash flows may have significantly different discount rates because the coupons on the instruments are different.

### Default rate and loss severity

For financial instruments backed by residential real estate or other assets, diversity in the portfolio is reflected in a wide range for loss severity due to varying levels of default. The lower end of the range represents high performing or government guaranteed collateral with a low probability of default or guaranteed timely payment of principal and interest while the higher end of the range relates to collateral with a greater risk of default.

### Credit spread and recovery rate

For financial instruments where credit spread is the significant unobservable input, the wide range represents positions with varying levels of risk. The lower end of the credit spread range typically represents shorter-dated instruments and/or those with better perceived credit risk. The higher end of the range typically comprises longer-dated financial instruments or those referencing non-performing, distressed or impaired reference credits. Similarly, the spread between the reference credit and an index can vary significantly based on the risk of the instrument. The spread will be positive for instruments that have a higher risk of default than the index (which is based on a weighted average of its components) and negative for instruments that have a lower risk of default than the index.

Similarly, recovery rates can vary significantly depending upon the specific assets and terms of each transaction. Transactions with higher seniority or more valuable collateral will have higher recovery rates while those transactions which are more subordinated or with less valuable collateral will have lower recovery rates.

### Correlation

There are many different types of correlation inputs, including credit correlation, cross-asset correlation (such as equity-interest rate correlation), and same-asset correlation (such as interest rate-interest rate correlation). Correlation inputs are generally used to value hybrid and exotic instruments. Generally, same-asset correlation inputs have a narrower range than cross-asset correlation inputs. However, due to the complex and unique nature of these instruments, the ranges for correlation inputs can vary widely across portfolios.

### Prepayment rate

Prepayment rates may vary between collateral pools, and are driven by a variety of collateral-specific factors, including the type and location of the underlying borrower, the remaining tenor of the obligation and the level and type (e.g., fixed or floating) of interest rate being paid by the borrower.

### Volatility and skew

Volatility and skew are impacted by the underlying risk, term and strike price of the derivative. In the case of interest rate derivatives, volatility rates may vary significantly between different underlying currencies and expiration dates on the options. Similarly, equity derivatives' volatility may vary greatly depending upon the underlying reference name on the derivative.

## Sensitivity analysis of unobservable input parameters

The fair value of certain financial instruments recognised in the consolidated financial statements is dependent in part or fully upon unobservable parameters which may include market inputs, prices or other data. The following table summarises the sensitivity of these financial instruments to reasonable changes in the assumptions underlying these parameters:

| | | Reflected in net income/(loss) |
|---|---|---|
| | Favorable changes | Unfavorable changes |
| **As at 30 June 2014 (USD million)** | | |
| Derivative assets and liabilities | 362 | (388) |
| Assets-backed securities, loans and derivatives | 72 | (70) |
| Debt and equity securities | 104 | (55) |
| Loans | 54 | (58) |
| **Total** | **592** | **(571)** |
| **As at 31 December 2013 (USD million)** | | |
| Derivative assets and liabilities | 295 | (336) |
| Assets-backed securities, loans and derivatives | 61 | (56) |
| Debt and equity securities | 112 | (63) |
| Loans | 57 | (57) |
| **Total** | **525** | **(512)** |

When the fair value of an instrument has multiple unobservable inputs, there is assumed to be no correlation between those inputs, as such the total sensitivity reflected in the table may be larger than if correlation had been included in the analysis. The analysis also ignores any correlation between the different categories of financial instruments listed in the table.

Derivative assets and liabilities include primarily equity, FX, credit and interest rate derivatives. The primary parameters subjected to sensitivity analysis included correlations, volatilities and credit spreads. Correlation sensitivities for equity and interest rate positions were subjected to equal movements up and down. The movements varied by product and existing levels of correlation based upon management judgment. Volatility sensitivities are predominantly equity volatilities and are generally subjected to a 5% to 10% movement up and down. Credit spread sensitivities were subjected to generally equal movements up and down based upon management judgment and underlying market conditions.

Asset backed securities, loans and derivatives include CMBS, ABS CDO and balance guaranteed swap positions. CMBS sensitivities are calculated by subjecting the prices of the positions to a 5% movement up and down. ABS CDO positions were subjected to sensitivities to underlying asset prices, as well as recovery rates on the underlying assets. The underlying asset prices were subjected to a range of downward movements with no movement up. Recovery rates are held at what management believes to be conservative levels and were increased by 10% resulting in favourable uncertainty. Balance guaranteed swap positions were subjected to sensitivities on prepayment speeds which were estimated based on management's assessment of fast/slow notional bands for movements up and down.

Debt and equity securities include equity fund linked products, variable funding notes and corporate and emerging market bonds. The primary parameters subjected to sensitivity analysis for equity fund linked products and variable funding notes include gap risk. Gap risk sensitivity is estimated by using limited pricing service information and valuing to the conservative side of the range of values. The parameter subjected to sensitivity for emerging market positions is price. Price sensitivity is subjected to a 100 basis point movement up and down. The parameter subjected to sensitivity for corporate debt is credit spreads and are generally subjected to a 15% movement up and down.

Loans include emerging market loans and corporate loans. For emerging market loans the parameter subjected to sensitivity analysis is credit spreads which is subjected to a 15% movement up and down. For corporate loans the parameter subjected to sensitivity analysis is the loan price which is subjected to an equal movement up and down which ranges from 5 to 10 points depending upon the position.

**Recognition of trade date profit**

If there are significant unobservable inputs used in the valuation technique, the financial instrument is recognised at the transaction price and any profit implied from the valuation technique at trade date is deferred over the life of the contract or the fair value is expected to become observable. When inputs to the valuation model become observable or the CSi group enters into offsetting transactions that substantially eliminate the instrument's risk.

The following table sets out the aggregate difference yet to be recognised in profit or loss at the beginning and end of year with a reconciliation of the changes of the balance during the year for trading assets and liabilities:

| | 30 June 2014 | 31 December 2013 |
|---|---|---|
| **Deferred trade date profit (USD million)** | | |
| Balance at the beginning of period | 383 | 394 |
| Increase due to new trades | 113 | 99 |
| Reduction due to passage of time | (88) | (52) |
| Reduction due to redemption, sales, transfers or improved observability | (29) | (58) |
| **Balance at the end of period** | **379** | **383** |

## 22. Subsequent events

On 01 August 2014, Credit Suisse announced the sale of Prime Fund Services (PFS), a provider of fund administration, custody and banking solutions for alternative investment managers, to BNP Paribas. This includes the PFS business held within the Dublin Branch of the CSi group. The transaction is expected to close in 2015, subject to anti-trust and regulatory clearances.

# Independent Auditors' Review Report to the Members of Credit Suisse International

## Introduction

We have been engaged by Credit Suisse International (the "Bank") to review the condensed set of financial statements in the half-yearly financial report for the six months ended 30 June 2014 which comprises the Condensed Consolidated Interim Statements of Comprehensive Income, Financial Position, Changes in Equity, Cash Flows for the six months ended, and the related explanatory notes ("the condensed consolidated interim financial statements"). We have read the other information contained in the half-yearly financial report and considered whether it contains any apparent misstatements or material inconsistencies with the information in the condensed set of financial statements.

This report is made solely to the Bank management in accordance with the terms of our engagement to assist the Bank in meeting the requirements of the Disclosure and Transparency Rules ("the DTR") of the UK's Financial Conduct Authority ("the UK FCA"). Our review has been undertaken so that we might state to the Bank those matters we are required to state to it in this report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the Bank for our review work, for this report, or for the conclusions we have reached.

## Directors' responsibilities

The half-yearly financial report is the responsibility of, and has been approved by, the Directors. The Directors are responsible for preparing the half-yearly financial report in accordance with the DTR of the UK FCA.

As disclosed in note 2, the annual financial statements of the CSi group are prepared in accordance with IFRSs as adopted by the EU. The condensed set of financial statements included in this half-yearly financial report has been prepared in accordance with IAS 34 Interim Financial Reporting as adopted by the EU.

## Our responsibility

Our responsibility is to express to the Bank a conclusion on the condensed set of financial statements in the half-yearly financial report based on our review.

## Scope of review

We conducted our review in accordance with International Standard on Review Engagements (UK and Ireland) 2410 *Review of Interim Financial Information* Performed by the Independent Auditor of the Entity issued by the Auditing Practices Board for use in the UK. A review of interim financial information consists of making enquiries, primarily of persons responsible for financial and accounting matters, and applying analytical and other review procedures. A review is substantially less in scope than an audit conducted in accordance with International Standards on Auditing (UK and Ireland) and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion.

## Conclusion

Based on our review, nothing has come to our attention that causes us to believe that the condensed set of financial statements in the half-yearly financial report for the six months ended 30 June 2014 is not prepared, in all material respects, in accordance with IAS 34 as adopted by the EU and the DTR of the UK FCA.

# Introduction

This report filed on Form 6-K contains certain information about Credit Suisse AG (Bank) relating to its results as of and for the three and twelve months ended December 31, 2014. On February 12, 2015, Credit Suisse Group AG (Group) announced its results for such three and twelve month period. A copy of the related Earnings Release is attached as an exhibit to this Form 6-K.

This Form 6-K (including the exhibit hereto) is hereby (i) incorporated by reference into the Registration Statement on Form F-3 (file no. 333-180300) and (ii) shall be deemed to be “filed” for purposes of the Securities Exchange Act of 1934, as amended except, in the case of both (i) and (ii), the information on pages 4 and 21 of the Earnings Release.

Credit Suisse AG is a Swiss bank and joint stock corporation established under Swiss law, and is a wholly-owned subsidiary of the Group. The Bank’s registered head office is in Zurich, and it has additional executive offices and principal branches in London, New York, Hong Kong, Singapore and Tokyo.

References herein to “CHF” are to Swiss francs.

# Operating and financial review and prospects

Except where noted, the business of the Bank is substantially the same as the business of the Group, and substantially all of the Bank's operations are conducted through the Private Banking & Wealth Management and Investment Banking segments. These segment results are included in Core Results. Certain other assets, liabilities and results of operations are managed as part of the activities of the two segments. However, since they are legally owned by the Group, they are not included in the Bank's consolidated financial statements. These relate principally to the activities of Neue Aargauer Bank and BANK-now, which are managed as part of Private Banking & Wealth Management. Core Results also includes certain Corporate Center activities of the Group that are not applicable to the Bank.

These operations and activities vary from period to period and give rise to differences between the Bank's consolidated assets, liabilities, revenues and expenses, including pensions and taxes, and those of the Group.

### Differences between the Group and the Bank businesses

| Entity | Principal business activity |
|---|---|
| Neue Aargauer Bank | Banking (in the Swiss canton of Aargau) |
| BANK-now | Private credit and car leasing (in Switzerland) |
| Financing vehicles of the Group | Special purpose vehicles for various funding activities of the Group, including for purposes of raising consolidated capital |

# Earnings Release

**Credit Suisse 4Q14 results:**

- **Core pre-tax income of CHF 1,449 million for strategic businesses and return on equity of 11%**
- **Reported Core pre-tax income of CHF 1,178 million and return on equity of 8%**
- **Look-through CET1 ratio of 10.2% as of the end of 4Q14, exceeding the 10% year-end 2014 target**

**Credit Suisse full-year 2014 results:**

- **Core pre-tax income of CHF 6,790 million for strategic businesses and return on equity of 12%**
- **Reported Core pre-tax income of CHF 3,509 million, stable compared to 2013, including the impact of the US cross-border settlement; return on equity of 5%**

**Private Banking & Wealth Management strategic pre-tax income of CHF 1,007 million in 4Q14 reflects strong loan growth and gains from sales, more than offset by lower performance fees and continued low interest rate environment compared to 4Q13; Wealth Management Clients with solid net new assets of CHF 4.4 billion**

**Investment Banking strategic pre-tax income of CHF 579 million in 4Q14 reflects strength of diversified franchise; stable revenues and improved returns in spite of increased market volatility and adverse impact from the recognition of funding valuation adjustments**

**Leverage exposure reduced by CHF 51 billion in 4Q14 before foreign exchange impact; announcing revised Group leverage targets**

**Implementing significant measures expected to more than offset impact of changing currency and interest rate environment after Swiss National Bank actions**

**Economic value of variable incentive compensation awarded for 2014 for the Group 9% lower than in 2013; reflecting continued compensation discipline and stable reported pre-tax income, including the impact of the US cross-border settlement**

**Consistent with 2013, Board of Directors proposes cash distribution of CHF 0.70 per share for 2014, free of Swiss withholding tax; also offering an optional scrip alternative, which allows shareholders to choose to receive distribution in the form of new shares**

**Private Banking & Wealth Management 4Q14 results:**

- Strategic businesses with pre-tax income of CHF 1,007 million, on slightly lower revenues compared to 4Q13; return on regulatory capital of 30%
- Total reported pre-tax income of CHF 882 million, including restructuring costs from the previously announced cost measures
- Strategic businesses with cost/income ratio of 67% for 4Q14 and 68% for the full year 2014
- Wealth Management Clients net margin increased to 27 basis points, including a 3 basis point benefit from sales gains
- Significant growth of ultra-high-net-worth individual lending initiative across all regions; CHF 5.6 billion in net new lending for 2014 compared to CHF 0.9 billion in 2013
- Net new assets of CHF 4.4 billion in Wealth Management Clients, driven by inflows from emerging markets, particularly EMEA and Asia Pacific
- Strategic PB&WM net asset outflows of CHF 0.2 billion, impacted by the change of management of funds from Hedging Griffo to a new venture in Brazil, Verde Asset Management, in which we have a significant investment, which resulted in CHF 9.2 billion of outflows
- Total reported PB&WM net asset outflows of CHF 3.0 billion including outflows in the non-strategic unit from ongoing regularization of asset base

**Investment Banking 4Q14 results:**

- Pre-tax income of CHF 579 million for strategic businesses increased by 20% on stable revenues, a reduced cost base and lower leverage exposure compared to 4Q13
- Total reported pre-tax income of CHF 12 million, including funding valuation adjustments and losses in the non-strategic unit
- Results negatively impacted by initial funding valuation adjustments of CHF 279 million, of which CHF 108 million were booked in the strategic businesses and CHF 171 million in the non-strategic businesses
- Strategic return on regulatory capital of 12%, excluding funding valuation adjustments
- Consistent strategic revenues compared to 4Q13 highlight strength of diversified franchise; stable revenues despite the negative impact from funding valuation adjustments and increased market volatility
- Improved capital efficiency with risk-weighted assets reduced by USD 10 billion and leverage exposure reduced by USD 62 billion compared to 3Q14

**Exceeded 10% Look-through CET1 ratio target; revised leverage targets:**

- Look-through BIS CET1 ratio of 10.2%; exceeding 10% year-end target; Look-through Swiss total capital ratio of 16.5% compared to 15.8% as of the end of 3Q14
- Leverage exposure reduced by CHF 51 billion in 4Q14 before foreign exchange movements; Look-through leverage ratio of 3.9%, Look-through CET1 leverage ratio of 2.4% as of the end of 4Q14
- Targeting additional Group leverage exposure reductions of approximately CHF 230 billion, resulting in new target range of CHF 930–950 billion by end-2015 on a foreign-exchange adjusted basis; targeting Look-through leverage ratio, including high and low trigger instruments, of approximately 4.5% by end-2015, of which the tier 1 component should be approximately 4.0% and the CET1 component approximately 3.0%

**Actions expected to more than offset impact of changing currency and interest rate environment:**

- Illustrative adverse impact on pre-tax income based on 2014 earnings of approximately CHF 125–175 million, or 3%, net of mitigating actions to be implemented in 2015, including incremental cost savings of CHF 200 million
- Adverse impact expected to be more than offset by end–2017
- Measures expected to be complemented by growth initiatives in PB&WM and by the remainder of the Group cost savings from 2011 cost reduction program; of which CHF 3.5 billion of adjusted annualized savings already delivered as of end-2014 compared to the annualized expense-run rate for 6M11

**Compensation for 2014:**

- Economic value of variable incentive compensation awarded for the Group 9% lower than in 2013; reflecting continued compensation discipline and stable reported pre-tax income, including the impact of the US cross-border settlement
- Both the Board of Directors and the Executive Board have voluntarily taken reductions to their compensation; total compensation of the Board of Directors was reduced by approximately 25% and the variable incentive compensation for the Executive Board was reduced by the equivalent of 20% of the amount that would have otherwise been granted, split between current and prior year awards

For further information on the differences between return on equity and return on regulatory capital, which are primarily due to the treatment of goodwill and capital components ineligible for look-through regulatory capital under Basel III, refer to the Appendix.

February 12, 2015 **Credit Suisse Group reports 4Q14 and full-year 2014 results**

Brady W. Dougan, Chief Executive Officer, said: “Our solid results for the fourth quarter demonstrate consistency in our performance amid a challenging market environment with increased volatility. Our strategic businesses generated a return on equity of 11% for the quarter and 12% for the full year. During the quarter, we further reduced leverage exposure, continued to execute our capital measures and exceeded our 10% Look-through CET1 year-end target, including the impact of the US settlement.”

On the distribution to shareholders, he said: “Consistent with 2013, the Board of Directors proposes a cash distribution of CHF 0.70 per share for 2014. We are offering an optional scrip alternative to our shareholders, allowing them to choose to receive the distribution in the form of new shares. Going forward, we remain committed to returning half of our earnings to shareholders, provided our Look-through CET1 capital ratio continues to exceed 10% and we meet our leverage ratio targets.”

Commenting on the changing currency and interest rate environment, he said: “We are implementing a number of measures to offset the impact from the strong appreciation of the Swiss franc and the more pronounced low interest rate environment on our profitability, following the SNB’s announcement in January. Based on 2014 earnings, we estimate the net adverse impact on our profit to be approximately 3% and expect to more than offset this impact through the announced measures by end-2017.”

Commenting on Private Banking & Wealth Management, he said: “In Private Banking & Wealth Management, we reported solid strategic pre-tax income of 1 billion Swiss francs. Our results were negatively impacted by lower performance fees and the ongoing low interest rate environment, compared to the fourth quarter of 2013. However, we continued to see strong loan growth from our ultra-high-net-worth individuals lending program and improved collaboration revenues between our two divisions. In Wealth Management Clients, we generated good net new assets with strong inflows from emerging markets.”

Commenting on Investment Banking, he said: “The profitability of our strategic businesses in Investment Banking improved by 20% compared to the fourth quarter of 2013. Revenues from our strategic businesses were consistent, amid a more volatile market environment, which generally benefitted our trading businesses while adversely impacting underwriting activity. This highlights the stability of our diversified franchise. Furthermore, we made continued progress in reducing the division’s risk-weighted assets and leverage exposure, in line with our strategy to sustain strong returns in Investment Banking.”

On the outlook for the first quarter of 2015, he said: “Year-to-date profitability of the Group is in line with last year. Our private banking and sales and trading businesses have shown an improving trend in recent weeks. Underwriting and advisory activities have started the year more slowly due to market volatility but we have a strong pipeline with execution dependent on market conditions.”

## Core Results summary

For additional information on financial information presented in this Earnings Release, including references to return on equity and return on regulatory capital, refer to the tabular disclosures in the Appendix and other explanatory disclosures regarding capital and leverage metrics in the section titled "Important information" on page 22.

Core Results do not include noncontrolling interests without significant economic interests.

In **4Q14, net income attributable to shareholders** was CHF 921 million.

**Income before taxes** was CHF 1,178 million in 4Q14 compared to a loss before taxes of CHF 529 million in 4Q13, primarily reflecting a 20% decrease in total operating expenses and an 8% increase in net revenues. In the strategic businesses, income before taxes was stable at CHF 1,449 million compared to 4Q13. In the non-strategic businesses, loss before taxes was CHF 271 million in 4Q14 compared to a loss before taxes of CHF 1,990 million in 4Q13.

**Net revenues** of CHF 6,376 million increased 8% compared to 4Q13. In the strategic businesses, net revenues were stable at CHF 6,000 million, reflecting higher net revenues in Corporate Center, offset by slightly lower net revenues in Private Banking & Wealth Management, and stable net revenues in Investment Banking. In the non-strategic businesses, net revenues were CHF 376 million in 4Q14 compared to negative net revenues of CHF 104 million in 4Q13.

**Provision for credit losses** was CHF 75 million in 4Q14, with net provisions of CHF 42 million in Private Banking & Wealth Management and CHF 30 million in Investment Banking.

**Total operating expenses** of CHF 5,123 million were down 20% compared to 4Q13, primarily reflecting 35% lower general and administrative expenses. In the strategic businesses, total operating expenses were stable at CHF 4,495 million compared to 4Q13, reflecting a 7% decrease in compensation and benefits, offset by a 6% increase in general and administrative expenses and an 11% increase in commission expenses. In the non-strategic businesses, total operating expenses of CHF 628 million decreased 66% compared to 4Q13, primarily due to a 75% decrease in general and administrative expenses, reflecting significantly higher litigation provisions in 4Q13, primarily relating to US tax matters and the settlement with the Federal Housing Finance Agency (FHFA). Business realignment costs in 4Q14 were CHF 265 million.

**Income tax expense** of CHF 236 million recorded in 4Q14 mainly reflected the impact of the geographical mix of results, the impact of deferred tax asset reassessments in the UK and Switzerland resulting in a net tax charge of CHF 176 million and a tax benefit of CHF 223 million following audit closures and tax settlements. Overall, net deferred tax assets increased CHF 591 million to CHF 5,983 million, mainly driven by foreign exchange movements and changes related to the funded status of pension assets and liabilities with an associated change in deferred tax balances as of the end of 4Q14 compared to 3Q14. Deferred tax assets on net operating losses increased CHF 822 million to CHF 1,812 million during 4Q14. The Core Results effective tax rate was 20.0% in 4Q14, compared to 28.1% in 3Q14.

For the **full-year 2014**, net income attributable to shareholders was CHF 2,105 million, down 10% compared to 2013. Income before taxes was stable at CHF 3,509 million compared to 2013. Net revenues were CHF 25,815 million, up 2% compared to 2013. Strategic net revenues were stable at CHF 25,126 million compared to 2013, with slightly lower net revenues for Private Banking & Wealth Management and stable net revenues for Investment Banking. In the non-strategic businesses, net revenues of CHF 689 million in 2014 improved from net revenue losses of CHF 258 million in 2013. Provision for credit losses increased 11%, reflecting increases in Investment Banking that were partly offset by decreases in Private Banking & Wealth Management. Total operating expenses were CHF 22,120 million, up 3% compared to 2013, primarily reflecting 8% higher general and administrative expenses. In the strategic businesses, total operating expenses were stable at CHF 18,184 million. In the non-strategic businesses, total operating expenses of CHF 3,936 million increased 18% compared to 2013, primarily reflecting a 25% increase in general and administrative expenses, driven by the litigation settlement charge of CHF 1,618 million relating to the final settlement of all outstanding US cross-border matters. Business realignment costs in 2014 were CHF 608 million.

**Range of reasonably possible losses related to certain legal proceedings:** The Group's estimate of the aggregate range of reasonably possible losses that are not covered by existing provisions for certain proceedings for which the Group believes an estimate is possible was zero to CHF 1.3 billion at the end 4Q14.

**Diluted earnings per share from continuing operations** were CHF 0.54 for 4Q14 compared to a diluted loss per share of CHF 0.37 in 4Q13 and diluted earnings per share of CHF 0.55 in 3Q14.

**Capital distribution proposal:** Our Board of Directors will propose to the shareholders at the Annual General Meeting on April 24, 2015 a distribution of CHF 0.70 per share out of reserves from capital contributions for the financial year 2014. The distribution will be free of Swiss withholding tax and will not be subject to income tax for Swiss resident individuals holding the shares as a private investment. The distribution will be payable in cash or, subject to any legal restrictions applicable in shareholders' home jurisdictions, in new shares of Credit Suisse Group at the option of the shareholder.

**Benefits of the integrated bank:** In 4Q14, Credit Suisse generated CHF 1.1 billion of collaboration revenues from the integrated bank. This corresponds to 17.7% of Core net revenues in 4Q14.

**Adoption of funding valuation adjustments (FVA):** Credit Suisse adopted the application of funding valuation adjustments on uncollateralized derivatives in 4Q14 in its Investment Banking division. Funding valuation adjustments also apply to collateralized derivatives where the collateral received cannot be used for funding purposes. The banking industry has increasingly moved towards this valuation methodology, which accounts for the funding costs of uncollateralized derivatives at their present value rather than accruing for these costs over the life of the derivatives. The one-time transitional charge at adoption recognized in the Investment Banking division was CHF 279 million in 4Q14.

**Compensation for 2014:** The economic value of variable incentive compensation awarded for 2014 for the Group was 9% lower than in 2013, reflecting continued compensation discipline and stable reported pre-tax income, including the impact of the final settlement of USD 2.8 billion regarding all outstanding US cross-border matters. Both the Board of Directors and the Executive Board voluntarily proposed a reduction to their compensation awarded for 2014. In proposing the 2014 compensation for the Board of Directors and the Executive Board, the Compensation Committee agreed that this event should have consequences for the compensation of the Group's top supervisory and management bodies, in order to reflect the collective institutional responsibility these bodies bear in safeguarding the long-term reputation and professional integrity of the Group's businesses globally, regardless of which individuals serve as directors or officers within these bodies at any given time. The Board of Directors approved a 50% reduction in their share-based compensation for 2014, which is approximately 25% of their total compensation. The Compensation Committee applied a downward adjustment equivalent to 20% of the amount that would have otherwise been granted to members of the Executive Board as variable compensation for 2014. Of this amount, half was deducted from the amount that would have been awarded as long-term incentive awards for 2014 and half was deducted from existing unvested long-term incentive awards granted for 2013.

## Private Banking & Wealth Management

In **4Q14**, Private Banking & Wealth Management reported income before taxes of CHF 882 million and net revenues of CHF 3,226 million. In its **strategic businesses**, Private Banking & Wealth Management reported income before taxes of CHF 1,007 million and net revenues of CHF 3,206 million. Compared to 4Q13, income before taxes was lower with lower transaction-and performance-based revenues and lower net interest income partially offset by higher other revenues. Net revenues were slightly lower compared to 4Q13 as significantly lower performance fees were partially offset by a gain on the sale of the local affluent and upper affluent business in Italy and a gain related to the partial sale of an investment in Euroclear. Compared to 3Q14, income before taxes was higher with higher net revenues partially offset by higher total operating expenses. Higher net revenues mainly reflected significantly higher performance fees and higher other revenues driven by the gains from the sales. In its **non-strategic businesses**, Private Banking & Wealth Management reported a loss before taxes of CHF 125 million and net revenues of CHF 20 million. In 4Q14, assets under management for the division were CHF 1,377.3 billion and the division had net asset outflows of CHF 3.0 billion.

For the **full-year 2014**, Private Banking & Wealth Management reported income before taxes of CHF 2,088 million and net revenues of CHF 12,637 million. In its **strategic businesses**, Private Banking & Wealth Management reported income before taxes of CHF 3,726 million and net revenues of CHF 12,108 million. Net revenues were slightly lower compared to 2013, with lower net interest income and lower transaction- and performance-based revenues partially offset by higher other revenues. Recurring commissions and fees were stable. Provision for credit losses was CHF 112 million in 2014 on a net loan portfolio of CHF 236 billion. Total operating expenses were lower compared to 2013 reflecting lower compensation and benefits, lower commission expenses and slightly lower general and administrative expenses. In its **non-strategic businesses**, Private

Banking & Wealth Management reported a loss before taxes of CHF 1,638 million compared to a loss before taxes of CHF 387 million in 2013, driven by the litigation settlement charge of CHF 1,618 million relating to the final settlement of all outstanding US cross-border matters. Net revenues of CHF 529 million were significantly lower compared to 2013 with a reduction across all revenue categories, reflecting the winding-down of non-strategic operations during the course of the year. The results in 2014 also reflected a CHF 109 million gain on the sale of the domestic private banking business booked in Germany and a CHF 91 million gain on the sale of the Customized Fund Investment Group business, compared to a CHF 237 million gain on the sale of the exchange-traded funds and secondary private equity businesses and investment-related gains of CHF 128 million in 2013.

**Capital metrics:** At the end of 4Q14, Private Banking & Wealth Management **strategic businesses** reported Basel III risk-weighted assets of CHF 102 billion, an increase of CHF 13 billion compared to the end of 4Q13. This increase was driven by methodology changes, increases in risk levels due to business growth and foreign exchange movements. At the end of 4Q14, Private Banking & Wealth Management **non-strategic businesses** reported Basel III risk-weighted assets of CHF 6 billion, unchanged compared to the end of 4Q13, reflecting a decrease of CHF 2 billion due to the continued progress in winding down the non-strategic portfolio offset by an external methodology impact of CHF 2 billion in 1Q14. Swiss leverage exposure was CHF 11 billion, reflecting a decrease of 50% compared to the end of 4Q13.

In 4Q14, the strategic businesses for Private Banking & Wealth Management reported income before taxes of CHF 1,007 million and net revenues of CHF 3,206 million. Results in 4Q14 were impacted by the higher average exchange rate of the US dollar against the Swiss franc, favorably impacting revenues and assets under management and adversely impacting expenses, primarily in Wealth Management Clients.

Compared to 4Q13, net revenues were slightly lower with lower transaction- and performance-based revenues and lower net interest income, partially offset by higher other revenues and slightly higher recurring commissions and fees. The decrease in transaction- and performance-based revenues reflected significantly lower performance fees and carried interest and lower placement fees, partially offset by higher corporate advisory fees arising from integrated solutions revenues and higher brokerage and product issuing fees. In a low interest rate environment, net interest income decreased due to significantly lower deposit margins on higher average deposit volumes, partially offset by higher loan margins on higher average loan volumes. Other revenues increased due to the gain on the sale of the local affluent and upper affluent business in Italy, the gain related to the partial sale of an investment in Euroclear, mostly recorded in Wealth Management Clients with the remainder in Corporate & Institutional Clients, and a lower impairment related to Asset Management Finance LLC (AMF) in 4Q14. Recurring commissions and fees were slightly higher driven by significantly higher discretionary mandate management fees and higher investment account and services fees, partially offset by slightly lower investment product management fees.

Compared to 3Q14, net revenues were higher driven by higher transaction- and performance-based revenues, higher other revenues, slightly higher recurring commissions and fees and slightly higher net interest income. The increase in transaction- and performance-based revenues reflected significantly higher annual performance fees from single manager hedge funds, higher carried interest and higher placement fees, partially offset by lower equity participation income as 3Q14 included a gain related to a more capital-efficient positioning of the liquidity portfolio. Other revenues were higher reflecting the gain on the sale of the local affluent and upper affluent business in Italy and the gain related to the partial sale of an investment in Euroclear. Recurring commissions and fees were slightly higher reflecting higher investment account and services fees, higher discretionary mandate management fees and slightly higher asset management fees. Net interest income was slightly higher with stable loan and deposit margins on slightly higher average loan and deposit volumes.

Provision for credit losses was CHF 39 million, compared to CHF 27 million in 4Q13 and CHF 26 million in 3Q14, reflecting a small number of individual cases related to commodities, structured finance and shipping in Corporate & Institutional Clients.

Total operating expenses were stable compared to 4Q13 and higher compared to 3Q14. Compared to 4Q13, compensation and benefits decreased 2%. General and administrative expenses increased 5% due to higher litigation provisions and higher professional services fees. Compared to 3Q14, compensation and benefits increased 6% reflecting higher discretionary compensation expenses. General and administrative expenses increased 7%, reflecting higher professional services fees and higher advertising and marketing expenses, partially offset by lower litigation provisions.

The cost/income ratio for the strategic results was 67% in 4Q14, stable compared to 4Q13 and down two percentage points compared to 3Q14.

In 4Q14, Private Banking & Wealth Management completed the sale of the local affluent and upper affluent business in Italy to Banca Generali S.p.A. The division also completed the transaction pursuant to which the former head of Credit Suisse Hedging-Griffo Asset Management became the controlling shareholder of a new firm, Verde Asset Management, and Credit Suisse became a minority shareholder.

| Cost/income ratio | 72.7 | 72.9 | 76.5 | – | – | 72.0 | 74.8 | – |

The *Wealth Management Clients* business in 4Q14 reported income before taxes of CHF 577 million and net revenues of CHF 2,153 million. Net revenues increased 5% compared to 4Q13, with higher other revenues, higher transaction- and performance-based revenues and slightly higher recurring commissions and fees, partially offset by lower net interest income. Higher other revenues reflected the gain on the sale of the local affluent and upper affluent business in Italy and the majority of the gain related to the partial sale of an investment in Euroclear. Higher transaction- and performance-based revenues reflected higher corporate advisory fees, higher foreign exchange client business and higher brokerage and product issuing fees, partially offset by significantly lower performance fees from Hedging-Griffo. Recurring commissions and fees were slightly higher with higher discretionary mandate management fees and higher investment account and services fees partially offset by lower investment product management fees and slightly lower banking services fees. Lower net interest income reflected the low interest rate environment, significantly lower deposit margins on slightly higher average deposit volumes, stable loan margins on higher average loan volumes and lower levels of deposits eligible as stable funding.

Compared to 3Q14, net revenues increased 5%, driven by higher other revenues and slightly higher recurring commissions and fees. Higher other revenues reflected the gain on the sale of the local affluent and upper affluent business in Italy and the majority of the gain related to the partial sale of an investment in Euroclear. Recurring commissions and fees were slightly higher with higher discretionary mandate management fees, slightly higher banking services fees and slightly higher investment account and services fees. Transaction- and performance-based revenues were stable with significantly lower equity participation income offset by higher foreign exchange client business, higher corporate advisory fees and real estate gains resulting from a credit recovery case in 4Q14. Equity participation income was significantly lower as 3Q14 included a gain related to a more capital-efficient positioning of the liquidity portfolio. Net interest income was stable with stable loan and deposit margins on slightly higher average loan and deposit volumes.

In 4Q14, the gross margin was 99 basis points, five basis points lower compared to 4Q13, mainly reflecting a 9.6% increase in average assets under management and the continued adverse interest rate environment, partially offset by the gain on the sale of the local affluent and upper affluent business in Italy and the majority of the gain related to the partial sale of an investment in Euroclear. Compared to 3Q14, the gross margin was up two basis points benefitting from the gains from the sales, partially offset by a 2.8% increase in average assets under management.

Wealth Management Clients net margin was 27 basis points in 4Q14, four basis points higher compared to 4Q13 reflecting the gains from the sales partially offset by the 9.6% increase in average assets under management. Compared to 3Q14, the net margin was two basis points higher as the gains from the sales were partially offset by higher operating expenses.

The *Corporate & Institutional Clients* business in 4Q14 reported income before taxes of CHF 220 million and net revenues of CHF 518 million. Net revenues were 7% higher compared to 4Q13, reflecting an increase in all revenue categories. Net interest income was higher with higher loan margins on higher average loan volumes partially offset by lower levels of deposits eligible as stable funding and significantly lower deposit margins on higher average deposit volumes. Higher transaction- and performance-based revenues reflected real estate gains resulting from a credit recovery case in 4Q14, higher brokerage and product issuing fees and higher sales and trading revenues, partially offset by lower foreign exchange client business and lower corporate advisory fees. Higher other revenues reflected the gain related to the partial sale of an investment in Euroclear. Recurring commissions and fees were higher driven by higher banking services fees and higher investment product management fees partially offset by lower discretionary mandate management fees.

Compared to 3Q14, net revenues increased 6%, with higher net interest income, higher other revenues and higher transaction- and performance-based revenues. Higher net interest income reflected slightly higher loan margins on slightly higher average loan volumes and slightly lower deposit margins on higher average deposit volumes. Higher other revenues reflected the gain related to the partial sale of an investment in Euroclear. Higher transaction- and performance-based revenues reflected the real estate gains in 4Q14, partially offset by lower corporate advisory fees. Recurring commissions and fees were stable including higher investment account and services fees.

The *Asset Management* business reported income before taxes of CHF 210 million in 4Q14, with net revenues of CHF 535 million. Net revenues decreased 26% compared to 4Q13, mainly driven by lower fee-based revenues partially offset by improved equity participations and other gains. Fee-based revenues were lower reflecting significantly lower performance fees from Hedging-Griffo, lower performance fees from single manager hedge funds and lower placement fees, partially offset by higher equity participations income. Improved equity participations and other gains reflected an impairment of CHF 68 million related to AMF recognized in 4Q13 compared to an impairment of CHF 4 million in 4Q14.

Net revenues increased 31% compared to 3Q14, primarily due to higher fee-based revenues mainly driven by annual performance fees from single manager hedge funds and higher placement fees.

The fee-based margin was 57 basis points in 4Q14, compared to 87 basis points in 4Q13 and 42 basis points in 3Q14. The decrease compared to 4Q13 reflected both the lower fee-based revenues and the higher average assets under management, which increased 11.1% compared to 4Q13. The increase compared to 3Q14 reflected the higher fee-based revenues, partially offset by the higher average assets under management, which increased 2.3% compared to 3Q14.

## Non-strategic results

*The non-strategic results for Private Banking & Wealth Management include positions relating to the restructuring of the former Asset Management division, run-off operations relating to the small markets exit initiative and certain legacy cross-border related run-off operations, litigation costs, primarily related to US cross-border matters, the impact of restructuring of the German onshore operations, other smaller non-strategic positions formerly in the Corporate & Institutional Clients business and the run-off and active reduction of selected products.*

In 4Q14, the non-strategic businesses reported a loss before taxes of CHF 125 million. In 3Q14, Private Banking & Wealth Management's non-strategic businesses reported income before taxes of CHF 71 million including the CHF 109 million gain on the sale of the domestic private banking business booked in Germany.

## Assets under management – Private Banking & Wealth Management

**Assets under management** of CHF 1,377.3 billion increased CHF 11.2 billion compared to the end of 3Q14, driven by foreign exchange-related movements, primarily resulting from the appreciation of the US dollar, and positive market movements, partially offset by net asset outflows. In 2014, assets under management of CHF 1,377.3 billion increased 7.4% compared to the end of 2013, reflecting positive foreign exchange-related movements, positive market movements and net new assets of CHF 28.2 billion.

**Net new assets:** Private Banking & Wealth Management recorded net asset outflows of CHF 3.0 billion in 4Q14. In the strategic portfolio, Wealth Management Clients contributed net new assets of CHF 4.4 billion in 4Q14 with continued strong inflows from emerging markets, particularly EMEA and Asia Pacific, partially offset by Western European cross-border outflows. Corporate & Institutional Clients in Switzerland reported net new assets of CHF 3.6 billion in 4Q14. Asset Management reported net asset outflows of CHF 10.6 billion in 4Q14, mainly driven by outflows of CHF 9.2 billion of assets that resulted from the change of management of funds from Hedging-Griffo to a new venture in Brazil, Verde Asset Management, in which Credit Suisse has a significant investment. In the non-strategic portfolio, net asset outflows of CHF 2.8 billion reflected the winding-down of the non-strategic portfolio. Private Banking & Wealth Management recorded net new assets of CHF 28.2 billion in 2014. In the strategic portfolio, Wealth Management Clients contributed net new assets of CHF 27.5 billion, with inflows from emerging markets and the ultra-high-net-worth individual client segment, partially offset by Western European cross-border outflows. Corporate & Institutional Clients in Switzerland reported net new assets of CHF 5.5 billion. Asset Management reported net new assets of CHF 3.7 billion, with inflows from a joint venture in emerging markets and in index and credit products partially offset by outflows relating to Verde Asset Management. In the non-strategic portfolio, net asset outflows of CHF 8.2 billion reflected the exit of certain businesses, of which CHF 2.0 billion were classified as discontinued operations.

## Investment Banking

In **4Q14**, Investment Banking reported income before taxes of CHF 12 million and net revenues of CHF 2,454 million. 4Q14 revenues were negatively impacted by the recognition of funding valuation adjustments of CHF 279 million, including CHF 108 million in the strategic businesses and CHF 171 million in the non-strategic businesses. Notwithstanding this, the **strategic businesses**, increased income before taxes by 20% on stable revenues, a reduced cost base and lower Swiss leverage exposure compared to 4Q13. Strategic revenues and income before taxes declined compared to strong 3Q14 performance, which included significant client deals. The **non-strategic business** continued to execute on the wind-down strategy, as evidenced by the sale of the commodities trading portfolio.

For the **full-year 2014**, Investment Banking profitability significantly improved, with income before taxes of CHF 2,107 million and net revenues of CHF 12,515 million, as compared to income before taxes of CHF 1,719 million and net revenues of CHF 12,565 million in 2013. The **strategic businesses** reported income before taxes of CHF 3,744 million and net revenues of CHF 13,087 million as compared to income before taxes of CHF 3,894 million and net revenues of CHF 13,096 million in 2013. Revenues in the strategic businesses were stable, as higher results in the fixed income sales and trading and underwriting and advisory franchises were offset by lower results in equity sales and trading. Fixed income sales and trading revenues increased 4% compared to 2013, driven by continued momentum in the securitized products franchise and a rebound in emerging markets revenues. Equity sales and trading revenues declined 5%, reflecting less favorable trading conditions, such as low volumes and low levels of volatility in the year. Additionally, 2013 results benefitted from quantitative easing in Japan. Systematic market making results were significantly weaker, following strong 2013 performance. Cash equities results reflected difficult market conditions and subdued activity in Brazil. The decline was partially offset by increased revenues in prime services, reflecting a strong market share, continued portfolio optimization and increased trading and clearing activity. Derivatives revenues were also robust, reflecting strong client activity and the strategy to diversify the business across products and regions. Underwriting and advisory results increased slightly, reflecting strong equity underwriting issuance, particularly initial public offerings (IPOs), and higher mergers and acquisitions (M&A) activity, mostly offset by lower debt underwriting results. Total operating expenses were stable from 2013. The **non-strategic businesses** made progress in winding-down the non-strategic unit, including reducing Basel III risk-weighted assets in US dollars, Swiss leverage exposure and costs in light of the goal to redeploy resources to growth initiatives in high returning businesses. Results reflected negative net revenues of CHF 572 million in 2014 compared to CHF 531 million in 2013. Total operating expenses decreased significantly, primarily driven by higher litigation provisions in 2013 in connection with mortgage-related matters, including the FHFA settlement.

**Capital metrics:** At the end of 4Q14, Investment Banking **strategic businesses** reported Basel III risk-weighted assets of USD 151 billion, down USD 2 billion compared to the end of 4Q13 and down USD 8 billion compared to the end of 3Q14. Swiss leverage exposure was USD 730 billion, reflecting a decrease of USD 19 billion compared to the end of 4Q13 and USD 61 billion compared to the end of 3Q14. Investment Banking made significant progress in winding down its **non-strategic businesses**, resulting in a significant reduction in Basel III risk-weighted assets and Swiss leverage exposure. At the end of 4Q14, the Basel III risk-weighted assets were USD 10 billion, down USD 11 billion compared to the end of 4Q13 and down USD 1 billion compared the end of 3Q14. This compares to a Basel III risk-weighted assets target of USD 6 billion by year-end 2015. Swiss leverage exposure was USD 64 billion, reflecting a decrease of USD 23 billion compared to the end of 4Q13 and USD 1 billion compared to the end of 3Q14. This compares to a target of USD 24 billion in Swiss leverage exposure by year-end 2015.

## Strategic results

In 4Q14, the strategic businesses reported income before taxes of CHF 579 million and net revenues of CHF 2,748 million. Net revenues reflect the impact from the recognition of funding valuation adjustments of CHF 108 million, including CHF 95 million in fixed income sales and trading and CHF 13 million in equity sales and trading. The fixed income trading environment was characterized by increased volatility due to a rapid decline in oil prices. Fixed income sales and trading revenues increased compared to 4Q13, reflecting higher volumes and client activity in global macro products and continued momentum in the high-returning securitized products franchise. Revenues declined compared to a strong 3Q14, which benefitted from favorable operating conditions across many of the businesses. Equity sales and trading results were higher compared to both 4Q13 and 3Q14 reflecting continued strength in prime services and robust trading performance consistent with higher market volumes and volatility. Underwriting and advisory results declined compared to both 4Q13 and 3Q14 as higher market volatility negatively impacted underwriting issuance activity, particularly leveraged finance. The decline was partially offset by higher advisory revenues. Results in 4Q14 were impacted by the weakening of the average rate of the Swiss franc against the US dollar, which positively impacted revenues, but adversely impacted expenses. Compared to 4Q13, revenues were stable and total operating expenses declined 6% in Swiss Francs while revenues declined 8% and operating expenses declined 13% in US dollars. Compared to 3Q14, revenues declined 20% and total operating expenses declined 10% in Swiss Francs, while revenues declined 23% and operating expenses declined 14% in US dollars.

**Fixed income sales and trading:** Excluding the funding valuation adjustment, results increased 19% in 4Q14, compared to 4Q13. The fixed income trading environment was characterized by increased volatility due to a rapid decline in oil prices. These operating conditions drove higher volumes and client activity in global macro products, but adversely impacted global credit products. Overall fixed income revenues increased, driven by a significant rebound in global macro products, from subdued 4Q13 levels, particularly in the European rates and foreign exchange businesses. Securitized products revenues increased significantly, as market share gains and continued diversification drove robust growth in the asset finance business. These gains were partially offset by lower revenues in corporate lending and global credit products, as lower leveraged finance origination activity resulted in weaker trading performance, given reduced client volumes. Emerging markets revenues declined, reflecting weakness in Latin America, mostly offset by robust trading revenues from Europe, Middle East and Africa (EMEA). Excluding the funding valuation adjustment, fixed income sales and trading revenues declined 39% compared to strong 3Q14 results, which reflected favorable operating conditions. Emerging markets revenues were substantially lower, reflecting lower trading activity across most regions and lower financing activity. Securitized products revenues declined, reflecting lower non-agency and agency results, which were partially offset by continued momentum in the asset finance franchise. Global credit products revenues declined, primarily driven by lower leveraged finance results, reflecting less favorable trading conditions. Corporate lending revenues also declined. Global macro products revenues declined driven by weaker performance in the US.

**Equity sales and trading:** Equity sales and trading revenues were higher compared to 4Q13, reflecting higher equity prices and trading volumes and a rebound in volatility. Prime services results were strong, reflecting a strong market share, continued portfolio optimization and increased trading and clearing activity. We had higher derivatives results, driven by expansion into growth markets, notably in Asia Pacific. Systematic market making results were higher, as a result of more favorable trading conditions, due to a rebound in volatility. Cash equities revenues were stable. Compared to 3Q14, results reflected a significant rebound in systematic market making revenues, benefitting from more favorable trading conditions. Cash equities revenues were higher, driven by higher commissions. Prime services revenues also increased, reflecting higher client trading and clearing activity. These gains were partially offset by lower derivatives revenues following strong 3Q14 growth in fee-based products distributed by Private Banking and Wealth Management, particularly in Asia Pacific.

**Underwriting and advisory:** Debt underwriting results were lower, primarily driven by weak leveraged finance performance compared to a strong 4Q13. Leveraged finance revenues were negatively impacted by higher credit market volatility due to a rapid decline in oil prices during the quarter. Results also reflected lower revenues from structured lending in emerging markets and also investment grade issuance. Equity underwriting results declined compared to strong 4Q13 industry activity and due to a slowdown in issuance volumes, in light of higher market volatility during the quarter. As a result, revenues declined across IPOs, follow-on offerings and convertibles. Advisory revenues were strong compared to 4Q13, driven by an increase in M&A activity, partially offset by a decrease in the share of wallet. Compared to 3Q14, debt underwriting results declined, driven by a seasonal slowdown in leveraged finance industry activity and less favorable conditions, as well as a decrease in the share of wallet. Results also reflected lower revenues from structured lending in emerging markets and also investment grade issuance. Equity underwriting results declined from 3Q14 which included the landmark Alibaba transaction. Convertible revenues were lower, reflecting a decline in industry activity and the share of wallet. This was partially offset by higher revenues from follow-on offerings and IPOs. The increase in advisory revenues compared to 3Q14 was driven by higher advisory revenues, reflecting an improvement in overall M&A market conditions, partially offset by a decrease in the share of wallet.

| Cost/income ratio | 78.4 | 70.0 | 82.6 | – | – | 71.1 | 70.2 | – |

**Total operating expenses** decreased 6% compared to 4Q13, driven by lower discretionary compensation expenses and lower UK bank levy expenses, offset in part by increased general and administrative expenses, reflecting the foreign exchange impact of the weakening of the Swiss franc compared to the US dollar. Compared to 3Q14, total operating expenses decreased 10% in CHF. The decrease was primarily driven by lower discretionary compensation expenses. General and administrative expenses increased, reflecting the foreign exchange impact of the weakening of the Swiss franc compared to the US dollar. General and administrative expenses in US dollars were stable, as lower litigation charges and lower UK bank levy expenses were offset by higher infrastructure costs.

## Non-strategic results

*The non-strategic results for Investment Banking include the fixed income wind-down portfolio, legacy rates business, primarily non-exchange-cleared instruments and capital-intensive structured positions, commodities trading business, legacy funding costs associated with non-Basel III compliant debt instruments, as well as certain legacy litigation costs and other small non-strategic positions.*

**Investment Banking – non-strategic results**

In 4Q14, Investment Banking made continued progress in winding down the non-strategic unit, including the reduction of Basel III risk-weighted assets and Swiss leverage exposure. In particular the sale of the commodities portfolio was executed. The non-strategic businesses reported a loss before taxes of CHF 567 million and negative net revenues of CHF 294 million in 4Q14. Negative net revenues were higher compared to both 4Q13 and 3Q14, primarily due to the recognition of the CHF 171 million funding valuation adjustment and the positive effect of significant valuation gains in 4Q13 and 3Q14 from proactive portfolio management initiatives in our fixed income wind-down portfolio. These losses were partially offset by gains arising from warranty claims on mortgage-related instruments compared to both 4Q13 and 3Q14 and lower funding costs from proactive management of both the legacy debt instruments and trading assets compared to 4Q13 and positive performance in legacy rates compared to 3Q14. Total operating expenses decreased compared to both 4Q13 and 3Q14, primarily reflecting significantly lower litigation provisions.

## Corporate Center

*Corporate Center includes parent company operations such as Group financing, expenses for projects sponsored by the Group and certain expenses and revenues that have not been allocated to the segments. It also includes consolidation and elimination adjustments required to eliminate intercompany revenues and expenses.*

In **4Q14**, the Corporate Center recorded income before taxes of CHF 284 million compared to a loss before taxes of CHF 389 million in 4Q13 and a loss before taxes of CHF 158 million in 3Q14. The Corporate Center recorded a loss before taxes of CHF 137 million in its strategic results. The non-strategic results reported income before taxes of CHF 421 million, primarily including gains on sales of real estate of CHF 375 million and fair value gains on own credit spreads of CHF 324 million, partially offset by business realignment costs of CHF 206 million, primarily consisting of severance and other compensation expenses relating to the Group-wide cost efficiency initiatives, and IT architecture simplification expenses of CHF 82 million.

For the **full-year 2014**, the Corporate Center recorded a loss before taxes of CHF 686 million compared to a loss before taxes of CHF 1,455 million in 2013. The Corporate Center recorded a loss before taxes of CHF 680 million in its strategic results. The non-strategic results reported a loss before taxes of CHF 6 million, primarily including business realignment costs of CHF 473 million, IT architecture simplification expenses of CHF 293 million and reclassifications to discontinued operations of CHF 143 million related to the sales of the Customized Fund Investment Group business and the domestic private banking business booked in Germany, partially offset by fair value gains on own credit spreads of CHF 545 million and gains on sales of real estate of CHF 414 million.

## Balance sheet, shareholders' equity, regulatory reporting and other information

### Balance sheet
As of the end of 4Q14, total assets of CHF 921.4 billion decreased 3% compared to 3Q14, reflecting a decrease from operating activities, partially offset by the foreign exchange translation impact. Excluding the foreign exchange translation impact, total assets decreased CHF 54.1 billion.

### Total shareholders' equity
Credit Suisse's total shareholders' equity increased to CHF 44.2 billion as of the end of 4Q14 compared to CHF 43.9 billion as of the end of 3Q14. Total shareholders' equity was impacted by net income, foreign exchange-related movements on cumulative translation adjustments and an increase in the share-based compensation obligation. These movements were partially offset by an actuarial pension adjustment and transactions relating to the hedging of future share-based compensation awards. As of the end of 4Q14, Credit Suisse had 1,607.2 million shares issued.

### BIS regulatory capital and ratios – Basel III
The common equity tier 1 (CET1) ratio was 15.0% as of the end of 4Q14, compared to 14.3% as of the end of 3Q14, reflecting an increase in CET1 capital and a slight decrease in risk-weighted assets. Credit Suisse's tier 1 ratio was 17.2% as of the end of 4Q14, compared to 16.4% as of the end of 3Q14. The total capital ratio increased to 20.9% as of the end of 4Q14 compared to 20.1% as of the end of 3Q14. CET1 capital was CHF 43.6 billion as of the end of 4Q14 compared to CHF 41.8 billion as of the end of 3Q14, mainly reflecting net income, a positive foreign exchange translation impact, an adjusted dividend accrual in 4Q14 and the net effect of share-based compensation, partially offset by the net impact of pension-related adjustments.

Risk-weighted assets decreased CHF 1.5 billion to CHF 291.4 billion as of the end of 4Q14, primarily reflecting decreased credit risk, partially offset by the foreign exchange translation impact.

Total eligible capital was CHF 61.0 billion as of the end of 4Q14, compared to CHF 58.8 billion as of the end of 3Q14, reflecting the increase in CET1 capital to CHF 43.6 billion, the increase in additional tier 1 capital to CHF 6.5 billion and the increase in tier 2 capital to CHF 10.9 billion.

As of the end of 4Q14, the Look-through CET1 ratio was 10.2%, compared to 9.8% as of the end of 3Q14, exceeding the year-end target of 10% and compared to a long-term target of 11.0%.

### Capital ratios – Basel III

| | Phase-in | | | Look-through | | |
|---|---|---|---|---|---|---|
| end of | **4Q14** | 3Q14 | 4Q13 | **4Q14** | 3Q14 | 4Q13 |
| **BIS capital ratios (%)** | | | | | | |
| CET1 ratio | 15.0 | 14.3 | 15.7 | 10.2 | 9.8 | 10.0 |
| Tier 1 ratio | 17.2 | 16.4 | 16.8 | 14.1 | 13.6 | 12.8 |
| Total capital ratio | 20.9 | 20.1 | 20.6 | 16.6 | 15.9 | 15.1 |

### Swiss regulatory capital and ratios
As of the end of 4Q14, Swiss CET1 capital and Swiss total capital ratios were 14.9% and 20.8%, respectively, compared to the Swiss capital ratio phase-in requirements of 6.75% and 10.18%, respectively.

On a look-through basis, Swiss CET1 capital was CHF 28.7 billion and the Swiss CET1 ratio was 10.1% as of the end of 4Q14, compared to CHF 27.8 billion and 9.7%, respectively, as of the end of 3Q14. Swiss total eligible capital was CHF 47.0 billion and the Swiss total capital ratio was 16.5% as of the end of 4Q14, compared to CHF 45.4 billion and 15.8%, respectively, as of the end of 3Q14, each on a look-through basis.

## Swiss leverage ratio

As of the end of 4Q14, the Swiss leverage ratio was 5.0% and total average exposure was CHF 1,227.5 billion. As of the end of 4Q14, Swiss total exposure was CHF 1,213 billion. The Look-through Swiss leverage ratio was 3.9% as of the end of 4Q14, compared to the current 4.0% requirement for 2019. For 2015, the Swiss leverage ratio requirement for 2019 will be 4.1%.

### Swiss leverage ratio

| | Phase-in | | | Look-through | | |
|---|---|---|---|---|---|---|
| end of | **4Q14** | 3Q14 | 4Q13 | **4Q14** | 3Q14 | 4Q13 |
| **Leverage ratios (%)** | | | | | | |
| Swiss leverage ratio | 5.0 | 4.9 | 5.1 | 3.9 | 3.8 | 3.7 |

## BCBS leverage ratio

Beginning in 1Q15, Credit Suisse has adopted the new Basel Committee on Banking Supervision (BCBS) leverage ratio framework as implemented in Switzerland by FINMA. Under the BCBS framework, the leverage ratio measures tier 1 capital against the end of period exposure. As of December 31, 2014 the estimated Look-through BCBS leverage ratio measured against tier 1 capital was 3.4% and the total BCBS leverage exposure was CHF 1,167 million. Credit Suisse is targeting a Look-through leverage ratio including high- and low-trigger capital instruments of approximately 4.5% and a Look-through CET1 leverage ratio of approximately 3.0% by end-2015. Credit Suisse has revised its BCBS leverage exposure target to CHF 930–950 billion by end 2015 from the previously reported Swiss leverage exposure target of approximately CHF 1,050 million, on a foreign exchange adjusted basis.

## Bond ratings

On February 3, 2015, Standard & Poor's downgraded a number of European bank groups, including Credit Suisse's holding company, Credit Suisse Group AG, which was downgraded one notch. The ratings of the Credit Suisse's operating entities where most business activities are conducted, including Credit Suisse AG, remain unchanged at this time.

## Important information

The Group has not finalized its 2014 Annual Report and the Group's independent registered public accounting firm has not completed its audit of the consolidated financial statements for the period. Accordingly, the financial information contained in this Earnings Release is subject to completion of year-end procedures, which may result in changes to that information. Certain reclassifications have been made to prior periods to conform to the current presentation.

For purposes of this Earnings Release, unless the context otherwise requires, the terms "Credit Suisse" and "the Group" mean Credit Suisse Group AG and its consolidated subsidiaries. The business of Credit Suisse AG, the Swiss bank subsidiary of the Group, is substantially similar to the Group, and these terms are used to refer to both when the subject is the same or substantially similar. The term "the Bank" is used when referring to Credit Suisse AG, the Swiss bank subsidiary of the Group, and its consolidated subsidiaries.

Information referenced in this Earnings Release, whether via website links or otherwise, is not incorporated into this Earnings Release.

As of January 1, 2013, Basel III was implemented in Switzerland along with the Swiss "Too Big to Fail" legislation and regulations thereunder. The related disclosures are in accordance with Credit Suisse's current interpretation of such requirements, including relevant assumptions. Changes in the interpretation of these requirements in Switzerland or in any of Credit Suisse's assumptions or estimates could result in different numbers from those shown herein.

References to phase-in and look-through included herein refer to Basel III requirements. Phase-in reflects that for the years 2014 – 2018, there will be a five-year (20% per annum) phase in of goodwill and other intangible assets and other capital deductions (e.g., certain deferred tax assets and participations in financial institutions) and for the years 2013 – 2022, there will be a phase out of certain capital instruments. Look-through assumes the full phase-in of goodwill and other intangible assets and other regulatory adjustments and the full phase out of certain capital instruments.

Unless otherwise noted, leverage ratio, leverage exposure and total capital amounts included herein are based on the current FINMA framework. The Swiss leverage ratio is calculated as Swiss total eligible capital, divided by a three-month average leverage exposure, which consists of balance sheet assets, off-balance sheet exposures, which consist of guarantees and commitments, and regulatory adjustments, which include cash collateral netting reversals and derivative add-ons.

BCBS leverage amounts are calculated based on our interpretation of, and assumptions and estimates related to, the BCBS requirements as implemented by FINMA that are effective for 1Q15, and the application of those requirements on our 4Q14 results. Changes in these requirements or any of our interpretations, assumptions or estimates would result in different numbers from those shown here. BCBS leverage exposure target assumes foreign exchange rates of USD/CHF and EUR/CHF as of the end of January 30, 2015.

Illustrative impact of SNB actions and our mitigating measures applied to 2014 results and assumes that the SNB actions occurred on January 1, 2014, foreign exchange rates of USD/CHF and EUR/CHF as of the end of January 30, 2015 and certain other modeling parameters; actual results may differ significantly.

A summary document containing a more detailed description of the option to receive the distribution in new shares will be made available to shareholders of Credit Suisse Group on or around March 20, 2015. The conditions for the exercise of the scrip alternative, including possible restrictions to its availability to some Credit Suisse Group shareholders, will be specified in such summary document. This Earnings Release does not constitute an offer to sell or an invitation to subscribe for, or the solicitation of an offer to buy or subscribe for, securities of Credit Suisse Group nor shall it (or any part of it) or the fact of its distribution form the basis of, or be relied on in connection with, any contract therefor. This Earnings Release does not constitute a prospectus within the meaning of any applicable law. Eligible shareholders should make their decision to receive a cash distribution or to receive new shares of Credit Suisse Group as part of the 2014 distribution solely based on the terms and conditions of the 2014 distribution and the additional information contained in the relevant documents, which will be available upon publication of the invitation to the 2015 Annual General Meeting. This Earnings Release does not constitute a recommendation to shareholders to elect to receive new shares of Credit Suisse Group as part of the 2014 distribution. Eligible shareholders are furthermore advised to consult their bank, tax or financial adviser before making any decision.

Return on equity for strategic results is calculated by dividing annualized strategic net income by average strategic shareholders' equity (derived by deducting 10% of non-strategic risk-weighted assets from reported shareholders' equity). Return on regulatory capital is calculated using income after tax and capital allocated based on the average of 10% of average risk-weighted assets and 2.4% of average leverage exposure.

Adjusted cost run-rates are non-GAAP financial measures. All expense reduction metrics against 6M11 annualized total expenses are measured at constant foreign exchange rates and exclude realignment and other significant expense items and variable compensation expenses. For further information regarding these measures, see the 4Q14 Results Presentation Slides.

The Group's estimate of the aggregate range of reasonably possible losses that are not covered by existing provisions which is discussed above relates only to those proceedings for which the Group believes an estimate is possible and which are discussed in Note 38 to the Consolidated Financial Statements in the Group's Annual Report on Form 20-F and updated in its quarterly reports (including the Group's Annual Report on Form 20-F that is scheduled to be released on March 20, 2015). It is inherently difficult to determine whether a loss is probable or even reasonably possible or to estimate the amount of any loss or loss range for many of the Group's legal proceedings. The Group's aggregate litigation provisions include estimates of losses, additional losses or ranges of loss for proceedings for which such losses are probable and can be reasonably estimated. The Group does not believe that it can estimate an aggregate range of reasonably possible losses for certain of its proceedings because of their complexity, the novelty of some of the claims, the early stage of the proceedings, the limited amount of discovery that has occurred and/or other factors. For additional details, see Note 38 to the Consolidated Financial Statements in the Group's Annual Report on Form 20-F and the litigation note in each of its quarterly Financial Reports.

Strategic net new assets are determined based on the assumption that assets managed across businesses relate to strategic businesses only.

Investors and others should note that we announce material information (including quarterly earnings releases and financial reports) to the investing public using press releases, SEC and Swiss ad hoc filings, our website and public conference calls and webcasts. We intend to also use our Twitter account @creditsuisse (https://twitter.com/creditsuisse) to excerpt key messages from our public disclosures, including earnings releases. We may retweet such messages through certain of our regional Twitter accounts, including @csschweiz (https://twitter.com/csschweiz) and @csapac (https://twitter.com/csapac). Investors and others should take care to consider such abbreviated messages in the context of the disclosures from which they are excerpted. The information we post on these Twitter accounts is not a part of this Earnings Release.

In various tables, use of "–" indicates not meaningful or not applicable.

| Number of employees | 45,800 | 45,500 | 46,000 | 1 | 0 | 45,800 | 46,000 | 0 |

[1] Based on tangible shareholders' equity attributable to shareholders, a non-GAAP financial measure, which is calculated by deducting goodwill and other intangible assets from total shareholders' equity attributable to shareholders. Management believes that the return on tangible shareholders' equity attributable to shareholders is meaningful as it allows consistent measurement of the performance of businesses without regard to whether the businesses were acquired.

## Credit Suisse reporting structure

Credit Suisse results include revenues and expenses from the consolidation of certain private equity funds and other entities in which we have noncontrolling interests without significant economic interest (SEI) in such revenues and expenses. Core Results include the results of our two segments and the Corporate Center and discontinued operations, but do not include noncontrolling interests without SEI.

Beginning in 2Q13, fees collected in an agent role in connection with certain customized fund services we provide to clients where those fees are passed on directly to a third-party investment manager are now presented on a net basis per the applicable accounting standards. These fees were previously recorded on a gross basis as fee income and commission expense. Prior periods have been restated to conform to the current presentation.

[1] Reflects a gain on the sale of the local affluent and upper affluent business in Italy and a gain related to the partial sale of an investment in Euroclear.

[2] Net revenues divided by average assets under management.

[3] Income before taxes divided by average assets under management.

[1] Business realignment costs relating to divisional realignment costs are prospectively presented in the relevant divisional non-strategic results beginning in 4Q13.
[2] Represents legacy funding costs associated with non-Basel III compliant debt instruments.
[3] Includes reclassifications to discontinued operations of revenues and expenses arising from the sale of ETF, secondary private equity and Customized Fund Investment Group businesses and the domestic private banking business booked in Germany.

## Impact from movements in own credit spreads

Core Results revenues are impacted by changes in credit spreads on fair-valued Credit Suisse long-term vanilla debt and debit valuation adjustments (DVA) relating to certain structured notes liabilities carried at fair value. Core Results are also impacted by fair value gains/(losses) on stand-alone derivatives relating to certain of our funding liabilities and reflect the volatility of cross-currency swaps and yield curve volatility and, over the life of the derivatives, will result in no net gains/(losses). These fair value gains/(losses) are recorded in the Corporate Center.

| in | **4Q14** | 3Q14 | 4Q13 | **2014** | 2013 |

[1] Includes regulatory adjustments not subject to phase-in, including a cumulative dividend accrual.
[2] Reflects 20% phase-in deductions including goodwill, other intangible assets, certain deferred tax assets and 80% of an adjustment for the accounting treatment of pension plans pursuant to phase-in requirements.
[3] Includes an adjustment for the accounting treatment of pension plans pursuant to phase-in requirements and other regulatory adjustments.
[4] Consists of high-trigger and low-trigger capital instruments. Of this amount, CHF 6.2 billion consists of capital instruments with a capital ratio write-down trigger of 7% and CHF 5.1 billion consists of capital instruments with a capital ratio write-down trigger of 5.125%.
[5] Includes hybrid capital instruments that are subject to phase-out.
[6] Includes 80% of goodwill and other intangible assets (CHF 7.1 billion) and other capital deductions, including gains/(losses) due to changes in own credit risk on fair valued financial liabilities, that will be deducted from CET1 once Basel III is fully implemented.
[7] Consists of high-trigger and low-trigger capital instruments. Of this amount, CHF 2.7 billion consists of capital instruments with a capital ratio write-down trigger of 7% and CHF 4.3 billion consists of capital instruments with a capital ratio write-down trigger of 5%.

## CET1 capital movement – Basel III

| | **4Q14** | 3Q14 |
|---|---|---|
| **CET1 capital (CHF million)** | | |
| **Balance at beginning of period** | **41,836** | **39,453** |
| Net income/(loss) | 921 | 1,025 |
| Foreign exchange impact | 657 | 1,499 |
| Other [1] | 152 | (141) |
| **Balance at end of period** | **43,566** | **41,836** |

[1] Reflects the net effect of share-based compensation, the impact of a dividend accrual, which in 4Q14 includes the assumption that 50% of the proposed dividend is distributed in shares, and a change in other regulatory adjustments.

## Risk-weighted assets by division – Basel III

| | 4Q14 | 3Q14 | end of 4Q13 | % change QoQ |
|---|---|---|---|---|
| **Risk-weighted assets by division (CHF million)** | | | | |

1 Distributions to owners in funds include the return of original capital invested and any related dividends.
2 Transactions with and without ownership changes related to fund activity are all displayed under "not changing ownership".
3 Includes a net tax benefit of CHF 5 million from the excess fair value of shares delivered over recognized compensation expense.
4 The Group had purchased certain call options on its own shares to economically hedge share-based compensation awards. In accordance with US GAAP, these call options were designated as equity instruments and, as such, were initially recognized in shareholders' equity at their fair values and not subsequently remeasured.
5 Includes a net tax charge of CHF (70) million from the excess recognized compensation expense over fair value of shares delivered.
6 Paid out of reserves from capital contributions.

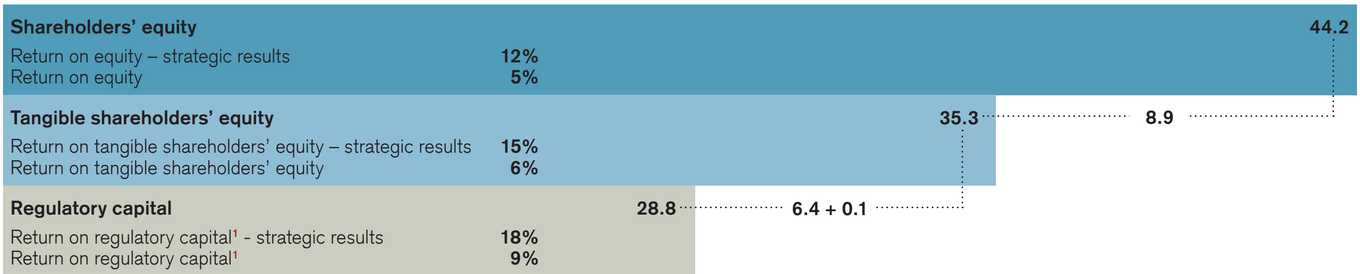
[1] Reflects MACCS issued in July 2012 that were mandatorily convertible into shares on March 29, 2013, which shares were settled and delivered on April 8, 2013.
[2] Reflects changes in the fair value of the PAF2 units which were reflected in the net results of the Group until the awards were finally settled. In 1Q14, the Group restructured the PAF2 awards as due to regulatory changes the capital relief provided by PAF2 awards was no longer available under Basel III. The PAF2 units were converted into other capital eligible compensation instruments and will no longer be settleable in Credit Suisse Group shares. Fair value of the PAF2 units which were reflected in the net profit of the Group were not adjusted for 4Q13 and 2013, respectively, as the effect would be antidilutive.
[3] Reflects weighted-average shares outstanding on PAF2 units. In 1Q14, the Group restructured the PAF2 awards as due to regulatory changes the capital relief provided by PAF2 awards was no longer available under Basel III. The PAF2 units were converted into other capital eligible compensation instruments and will no longer be settleable in Credit Suisse Group shares. Weighted-average shares on PAF2 units for 4Q13 and 2013, respectively, were excluded from the diluted earnings per share calculation, as the effect would be antidilutive.
[4] Weighted-average potential common shares relating to instruments that were not dilutive for the respective periods (and therefore not included in the diluted earnings per share calculation above) but could potentially dilute earnings per share in the future were 9.1 million, 8.7 million, 36.0 million, 8.9 million and 35.9 million for 4Q14, 3Q14, 4Q13, 2014 and 2013, respectively.
[5] Due to the net loss in 4Q13, 1.7 million weighted-average share options and warrants outstanding and 0.8 million weighted-average share awards outstanding were excluded from the diluted earnings per share calculation, as the effect would be antidilutive.

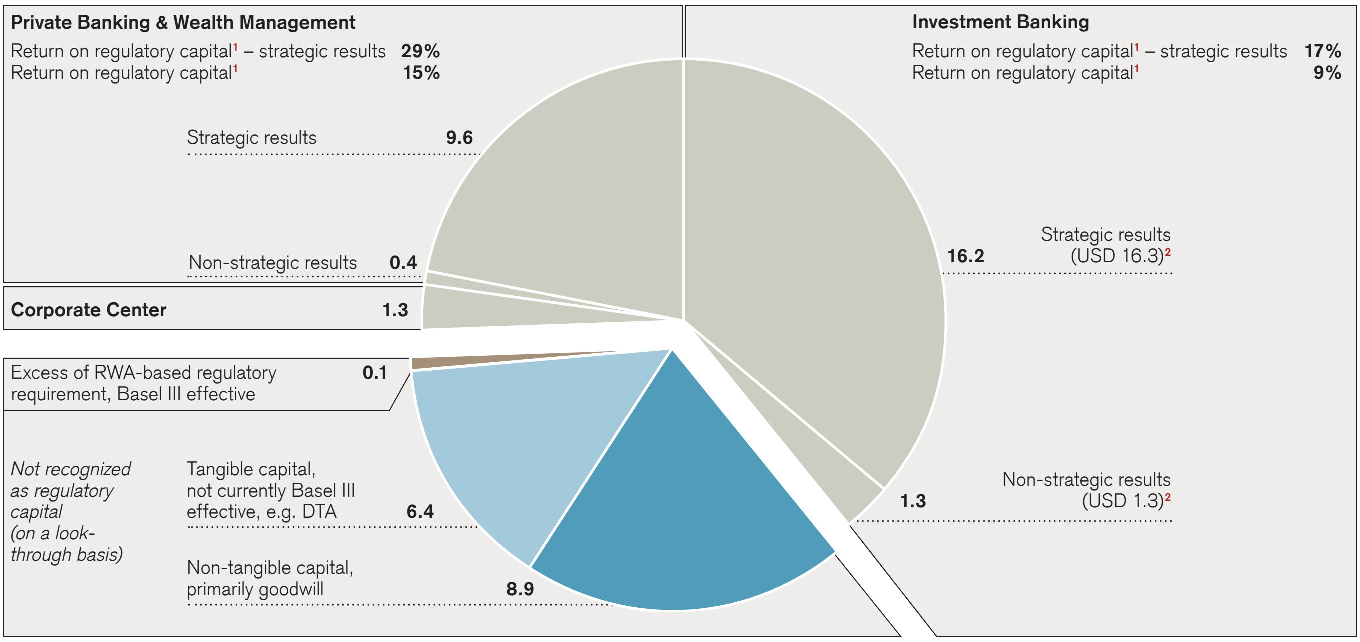
## Relationship between total shareholders' equity, tangible shareholders' equity and regulatory capital

Credit Suisse measures firm-wide returns against total shareholders' equity and tangible shareholders' equity. In addition, it also measures the efficiency of the firm and its divisions with regards to the usage of capital as determined by the minimum requirements set by regulators. This regulatory capital is calculated as the average of 10% of risk-weighted assets and 2.4% of the leverage exposure utilized by each division and the firm as a whole. These percentages are used in the calculation in order to reflect the 2019 fully phased in Swiss regulatory minimum requirements for Basel III CET1 capital and leverage ratio.

End of 4Q14 / in 2014 (CHF billion, except where indicated)



## Regulatory capital allocation



[1] Calculated using income after tax, assumes tax rate of 30% and capital allocated on average of 10% of average risk-weighted assets and 2.4% of average leverage exposure.
[2] For Investment Banking, capital allocation and return calculation are based on US dollar denominated numbers.

**Cautionary statement regarding forward-looking information**

This press release contains statements that constitute forward-looking statements. In addition, in the future we, and others on our behalf, may make statements that constitute forward-looking statements. Such forward-looking statements may include, without limitation, statements relating to the following:

- our plans, objectives or goals;
- our future economic performance or prospects;
- the potential effect on our future performance of certain contingencies; and
- assumptions underlying any such statements.

Words such as “believes,” “anticipates,” “expects,” “intends” and “plans” and similar expressions are intended to identify forward-looking statements but are not the exclusive means of identifying such statements. We do not intend to update these forward-looking statements except as may be required by applicable securities laws.

By their very nature, forward-looking statements involve inherent risks and uncertainties, both general and specific, and risks exist that predictions, forecasts, projections and other outcomes described or implied in forward-looking statements will not be achieved. We caution you that a number of important factors could cause results to differ materially from the plans, objectives, expectations, estimates and intentions expressed in such forward-looking statements. These factors include:

- the ability to maintain sufficient liquidity and access capital markets;
- market and interest rate fluctuations and interest rate levels;
- the strength of the global economy in general and the strength of the economies of the countries in which we conduct our operations, in particular the risk of continued slow economic recovery or downturn in the US or other developed countries in 2015 and beyond;
- the direct and indirect impacts of continuing deterioration or slow recovery in residential and commercial real estate markets;
- adverse rating actions by agencies in respect of sovereign issuers, structured credit products or other credit-related exposures;
- the ability to achieve our objectives, including improved performance, reduced risks, lower costs, and more efficient use of capital;
- the ability of counterparties to meet their obligations to us;
- the effects of, and changes in, fiscal, monetary, trade and tax policies, and currency fluctuations;
- political and social developments, including war, civil unrest or terrorist activity;
- the possibility of foreign exchange controls, expropriation, nationalizations or confiscations in countries where we conduct operations;
- operational factors such as systems failure, human error, or the failure to implement procedures properly;
- actions taken by regulators with respect to our business and practices in one or more of the countries where we conduct operations;
- the effects of changes in laws, regulations or accounting policies or practices;
- competition in geographic and business areas in which we conduct our operations;
- the ability to retain and recruit qualified personnel;
- the ability to maintain our reputation and promote our brand;
- the ability to increase market share and control expenses;
- technological changes;
- the timely development and acceptance of our new products and services and the perceived overall value of these products and services by users;
- acquisitions, including the ability to integrate businesses successfully, and divestitures, including the ability to sell non-core assets;
- the adverse resolution of litigation and other contingencies;
- the ability to achieve our cost efficiency goals and cost targets; and
- our success at managing the risks involved in the foregoing.

We caution you that the foregoing list of important factors is not exclusive. When evaluating forward-looking statements, you should carefully consider the foregoing factors and other uncertainties and events, including the information set forth in “Risk Factors” in I – Information on the company in our Annual Report 2013.

## DEAR SHAREHOLDERS

We delivered a good performance for the third quarter of 2014, with our results demonstrating progress in the execution of our strategy and continued strong momentum with our clients.

We reported net income attributable to shareholders of CHF 1,025 million for the third quarter and a return on equity of 10%. Net income attributable to shareholders for the first nine months of this year was CHF 1,184 million.

In 2013, we introduced the concept of "strategic results" to reflect management responsibilities following the set-up of non-strategic units. This reporting structure also serves to give you a more accurate picture of the performance of our key businesses, excluding the impact of businesses we have chosen to exit and other non-strategic positions and items. The results of these non-strategic units are disclosed each quarter as our "non-strategic results". We think it is helpful for our investors to know how our business performs when excluding the drag from the non-strategic units.

Looking at our strategic results, net income attributable to shareholders was CHF 1,115 million for the third quarter and CHF 3,807 million for the first nine months of this year. Our strategic return on equity for the quarter was 11% and 13% for the first nine months of this year, compared to our through-the-cycle Group target of 15%.

**Progress in our two divisions**

In Private Banking & Wealth Management our profitability benefitted from ongoing cost discipline, although margins remain subdued and revenues continue to be impacted by the low interest-rate environment. Our strategic businesses in Private Banking & Wealth Management generated pre-tax income of CHF 872 million and a continued high return on regulatory capital of 27% in the quarter. Our cost efficiency measures helped us to sustain our net margin in Wealth Management Clients at 27 basis points for the first nine months of this year. The cost/income ratio for our strategic businesses was 69% for both the third quarter and the first nine months of 2014.

Our strategic businesses generated net new assets of CHF 8.8 billion in the quarter, driven by strong growth in emerging markets, particularly in Asia Pacific. These strong asset inflows were partly offset by CHF 0.7 billion of outflows from our Western European cross-border business due to the importance we have placed on the regularization of our asset base. Our robust results in Asia Pacific were driven by the successful expansion of our franchise, with increased footprints in Greater China and Singapore. Additionally, we continue to focus on leveraging our strong position in our Swiss home market. In the first nine months of this year, we saw sustained growth in our ultra-high-net-worth individual lending initiative, with good momentum across both emerging and mature markets, recording CHF 3.9 billion in net new lending, compared to CHF 1.0 billion in the first nine months of 2013. We also increased collaboration revenues across both divisions, which we view as a competitive advantage, particularly with ultra-high-net-worth individual clients – one of our key growth segments.

In Investment Banking, the results for our strategic businesses reflect substantially increased profitability, improved returns and robust client activity across many businesses. For the third quarter, we generated pre-tax income of CHF 995 million in our strategic businesses – up 43% from last year's third quarter – and a return on regulatory capital of 17%. Our strong results in fixed income trading, especially in emerging markets and securitized products, and in equity underwriting, were driven by significant client transactions. Equities delivered a stable result, as robust derivatives revenues were offset by muted trading volumes in cash equities.

We continued to work towards increasing the capital and cost efficiency of our strategic businesses in Investment Banking, reporting a return on regulatory capital of 19% and a cost/income ratio of 69% for the first nine months of this year.

**Progress in executing strategy to support cash returns to shareholders**

During the third quarter, we made further progress in winding down positions in our non-strategic units. We completed the sale of our domestic private banking business booked in Germany, and, in our Investment Banking non-strategic unit, we reduced risk-weighted assets by USD 2 billion and leverage exposure by USD 11 billion.

Our Look-through Swiss leverage ratio improved to 3.8% during the quarter, within reach of the 4.1% Swiss requirement for 2019, effective in 2015. We are targeting to reach approximately 4.5% by the end of 2015. We are executing the capital measures we announced in May, which are expected to fully mitigate the impact of the US cross-border settlement on our capital position. As of the end of the third quarter of 2014, our Look-through CET1 ratio stood at 9.8%, compared to 9.5% as of the end of the second quarter. We remain on track to improve our Look-through CET1 ratio to above 10% by the end of this year. This includes the continued accrual of cash dividends for 2014. We remain committed to our intention of returning approximately half our earnings to shareholders through annual distributions, once we reach a Look-through CET1 ratio of 10% and as we continue to accrete capital toward our 11% long-term target.

We would like to thank you, our shareholders and clients, for the trust you have placed in Credit Suisse.

Sincerely

Urs Rohner Brady W. Dougan

October 2014

As of January 1, 2013, Basel III was implemented in Switzerland along with the Swiss "Too Big to Fail" legislation and regulations thereunder. The related disclosures are in accordance with the current interpretation of such requirements, including relevant assumptions. Changes in the interpretation of these requirements in Switzerland or in any of Credit Suisse's assumptions or estimates could result in different numbers from those shown herein.

Unless otherwise noted, leverage ratio, leverage exposure and total capital amounts included herein are based on the current FINMA framework. The Swiss leverage ratio is calculated as Swiss total eligible capital, divided by a three-month average leverage exposure, which consists of balance sheet assets, off-balance sheet exposures, which consist of guarantees and commitments, and regulatory adjustments, which include cash collateral netting reversals and derivative add-ons.

Return on equity for strategic results is calculated by dividing annualized strategic net income by average strategic shareholders' equity (derived by deducting 10% of non-strategic risk-weighted assets from reported shareholders' equity). Return on regulatory capital is calculated using income after tax and capital allocated based on the average of 10% of average risk-weighted assets and 2.4% of average leverage exposure.

All expense reduction metrics against 6M11 annualized total expenses are measured at constant foreign exchange rates and exclude realignment and other significant expense items and variable compensation expenses. For further information regarding these measures, see the 3Q14 Results Presentation Slides.

Strategic net new assets are determined based on the assumption that assets managed across businesses relate to strategic businesses only.

Refer to "Results overview" in II – Operating and financial review – Core Results in our Annual Report 2013 for further information on Core Results.

# Financial Report 3Q14

For purposes of this report, unless the context otherwise requires, the terms "Credit Suisse," "the Group," "we," "us" and "our" mean Credit Suisse Group AG and its consolidated subsidiaries. The business of Credit Suisse AG, the Swiss bank subsidiary of the Group, is substantially similar to the Group, and we use these terms to refer to both when the subject is the same or substantially similar. We use the term "the Bank" when we are only referring to Credit Suisse AG, the Swiss bank subsidiary of the Group, and its consolidated subsidiaries.

Abbreviations are explained in the List of abbreviations in the back of this report.

Publications referenced in this report, whether via website links or otherwise, are not incorporated into this report.

In various tables, use of "–" indicates not meaningful or not applicable.

# Credit Suisse at a glance

**Credit Suisse**

As one of the world's leading financial services providers, we are committed to delivering our combined financial experience and expertise to corporate, institutional and government clients, to ultra-high-net-worth and high-net worth individuals worldwide, as well as affluent and retail clients in Switzerland. Founded in 1856, today we have a global reach with operations in over 50 countries and 45,500 employees from over 150 different nations. Our broad footprint helps us to generate a geographically balanced stream of revenues and net new assets and allows us to capture growth opportunities around the world. We serve our clients through our two divisions, which cooperate closely to provide holistic financial solutions, including innovative products and specially tailored advice.

**Private Banking & Wealth Management**

Private Banking & Wealth Management offers comprehensive advice and a wide range of financial solutions to private, corporate and institutional clients. The Private Banking & Wealth Management division comprises the Wealth Management Clients, Corporate & Institutional Clients and Asset Management businesses. Our Wealth Management Clients business serves ultra-high-net-worth and high-net-worth individuals around the globe, as well as affluent and retail clients in Switzerland. Our Corporate & Institutional Clients business serves the needs of corporations and institutional clients, mainly in Switzerland. Asset Management offers a wide range of investment products and solutions across diverse asset classes and investment styles, serving governments, institutions, corporations and individuals worldwide.

**Investment Banking**

Investment Banking provides a broad range of financial products and services, including global securities sales, trading and execution, prime brokerage and capital raising services, corporate advisory and comprehensive investment research, with a focus on businesses that are client driven, flow-based and capital-efficient. Clients include corporations, governments, institutional investors, including pension funds and hedge funds, and private individuals around the world. Credit Suisse delivers its investment banking capabilities via regional and local teams based in major global financial centers. Strongly anchored in Credit Suisse's integrated model, Investment Banking works closely with Private Banking & Wealth Management to provide clients with customized financial solutions.

# Operating environment

Solid economic data reported in the US stood in contrast with softer data in the eurozone and China. Most major equity markets ended the quarter almost unchanged, and volatility increased towards the end of 3Q14. Long-dated government benchmark bond yields continued to decrease. The US dollar strengthened against all major currencies in 3Q14.

## ECONOMIC ENVIRONMENT

US economic data remained generally favorable in 3Q14. Certain economic indicators rose to multiyear highs, although housing market data continued to be relatively sluggish. Despite the unemployment rate remaining close to its lowest levels since 3Q08, there were few signs of rising wages. The inflation rate continued to stay below the US Federal Reserve's (Fed) target. In contrast, economic activity in the eurozone weakened, and inflation remained significantly below the European Central Bank's (ECB) target. After a slight rebound during 2Q14, Chinese economic data began to show renewed signs of softening. The People's Bank of China reacted with liquidity measures for the largest banks. Economic activity in other large emerging economies such as Russia and Brazil remained muted.

The different economic performance in the US and the eurozone was reflected in the contrasting decisions of their respective central banks. At its September meeting, the Fed announced a further reduction of its monthly asset purchases and presented principles for eventual policy normalization. The ECB, on the contrary, cut interest rates again in September and announced a program for purchases of private sector assets.

Most major equity markets ended the quarter almost unchanged. Geopolitical tensions, weak macro momentum in Europe and general uncertainty around major central bank actions contributed to the lackluster performance. Japanese equities continued their positive trend, and the falling yen helped to shrug off mixed economic data. Japan, Switzerland and the US outperformed the market and, within emerging markets, Eastern Europe underperformed. Technology and healthcare were the strongest sectors, while energy and materials were the weakest. Equity markets' volatility, as measured by the Chicago Board Options Exchange Market Volatility Index (VIX), ended the quarter higher. Risk appetite, as measured by the Credit Suisse equity risk appetite index, decreased slightly over the quarter. The Credit Suisse Hedge Fund Index increased 0.6% in 3Q14.

### Yield curves

Long-dated yield curves decreased alongside lower inflationary pressure; short-dated yield curve in US dollars increased slightly.

### Volatility

%

**Source:** Datastream, Credit Suisse

Long-dated government bond yields continued to decline in 3Q14 alongside lower inflationary pressure. Euro bonds benefited particularly, with deflationary concerns supporting more easing measures by the ECB (refer to the charts "Yield curves"). In this context, eurozone peripheral bonds (with the exception of Greece) recorded a strong performance. The decrease in short-dated government bond yields was less significant, and they even increased slightly in US dollars, reflecting market expectations that the Fed may normalize its policy next year. Investment grade and high yield credit spreads in developed markets widened with the move being more significant in US dollars due to the potential withdrawal of monetary stimulus in the US (refer to the chart "Credit spreads"). In emerging markets, wider spreads also reflected ongoing geopolitical concerns.

The US dollar strengthened against all major currencies in 3Q14. The divergence of monetary policy between the Fed and the ECB was a key driver. The euro depreciated against the British pound as monetary policy by the ECB became more expansionary, and markets were expecting the Bank of England to raise rates in 2015. The Swiss franc remained slightly above the minimum exchange rate of CHF 1.20 per euro previously declared by the Swiss National Bank (SNB), but it weakened against the US dollar.

During 3Q14, commodity markets fully reversed gains achieved in the first half, with benchmark indices in negative territory year-to-date. All segments shifted lower with slumping energy markets and renewed weakness in agriculture, which showed the worst performance. A combination of more shallow demand conditions and improved supplies, despite ongoing geopolitical turmoil, triggered a significant correction in oil markets. Recent US dollar strength and rising short-term US Treasury yields, albeit from low levels, had a negative price impact on precious metals, including gold.

## Credit spreads

Credit spreads widened over the quarter.

2 Dealogic.

### SECTOR ENVIRONMENT

Banks outperformed the market in 3Q14 by 1.5%. In particular, European banks showed good performance, ending the quarter higher by 3.6% (refer to the charts "Equity Markets").

In private banking, the low interest rate environment continued to adversely impact earnings. Clients maintained a cautious investment stance, with cash deposits remaining high despite ongoing low or falling interest rates. Overall, the wealth management sector continued to adapt to further industry-specific regulatory changes.

For investment banking, global equity trading volumes decreased compared to 2Q14 but increased compared to 3Q13. Global announced mergers and acquisitions (M&A) volumes decreased compared to 2Q14 but increased compared to 3Q13. Global completed M&A volumes increased compared to 2Q14 and 3Q13. Global equity underwriting volumes were significantly lower compared to 2Q14 but increased compared to 3Q13, also driven by stronger underwriting activity in Europe. Global debt underwriting volumes were significantly lower compared to 2Q14 and decreased compared to 3Q13. US fixed income volumes were higher compared to 2Q14. Compared to 3Q13, US fixed income volumes decreased significantly, driven particularly by lower treasury and corporate volumes.

# Credit Suisse

In 3Q14, we recorded net income attributable to shareholders of CHF 1,025 million. Diluted earnings per share from continuing operations were CHF 0.55 and return on equity attributable to shareholders was 9.7%.

As of the end of 3Q14, our Basel III CET1 ratio was 14.3% and 9.8% on a look-through basis. Our risk-weighted assets increased 3% compared to 2Q14 to CHF 292.9 billion.

## INFORMATION AND DEVELOPMENTS

### Format of presentation

In managing the business, revenues are evaluated in the aggregate, including an assessment of trading gains and losses and the related interest income and expense from financing and hedging positions. For this reason, individual revenue categories may not be indicative of performance.

As of January 1, 2013, the Basel Committee on Banking Supervision (BCBS) Basel III framework was implemented in Switzerland along with the Swiss “Too Big to Fail” legislation and regulations thereunder. Our related disclosures are in accordance with our current interpretation of such requirements, including relevant assumptions. Changes in the interpretation of these requirements in Switzerland or in any of our assumptions or estimates could result in different numbers from those shown in this report.

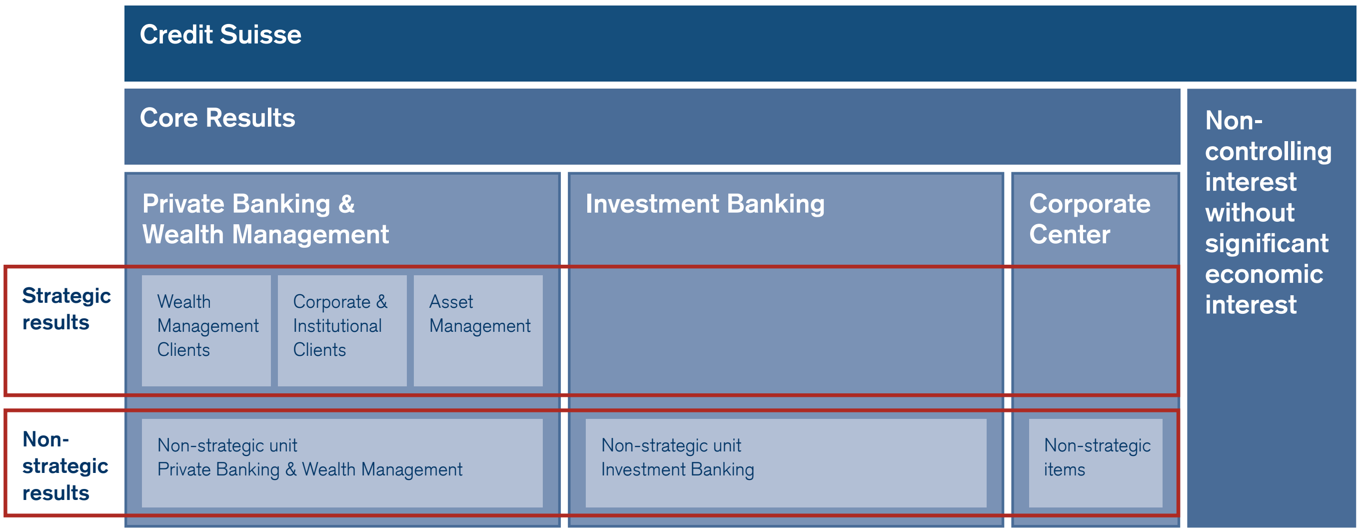
References to Swiss leverage exposure refer to the aggregate of balance sheet assets, off-balance sheet exposures, consisting of guarantees and commitments, and regulatory adjustments, including cash collateral netting reversals and derivative add-ons.

▸ Refer to “Swiss leverage ratio” in II – Treasury, risk, balance sheet and off-balance sheet – Capital management – Swiss capital metrics for further information.

### Discontinued operations

The Private Banking & Wealth Management division completed the sale of our domestic private banking business booked in Germany to ABN AMRO in 3Q14. This transaction qualifies for discontinued operations treatment under US generally accepted accounting principles (US GAAP), and revenues and expenses of this business and the relevant gains on disposal are classified as discontinued operations in the Group’s consolidated statements of operations. In the Private Banking & Wealth Management segment, the gains and expenses related to the business disposals are included in the segment’s non-strategic results. The reclassification of the revenues and expenses from the segment results to discontinued operations for reporting at the Group level is effected through the Corporate Center.

## Credit Suisse reporting structure



Credit Suisse results include revenues and expenses from the consolidation of certain private equity funds and other entities in which we have noncontrolling interests without significant economic interest (SEI) in such revenues and expenses. Core Results include the results of our two segments and the Corporate Center and discontinued operations, but do not include noncontrolling interests without SEI.

### Management changes

Effective October 17, 2014, Eric Varvel was appointed as Chairman Asia Pacific and Middle East and stepped down from the Executive Board and his position as joint head of the Investment Banking division. Jim Amine and Tim O'Hara were appointed to the Executive Board to jointly lead the Investment Banking division with Gaël de Boissard. Jim Amine will continue to have responsibility for the investment banking department, while Tim O'Hara will continue to head the equities business and his role as President and Chief Executive Officer (CEO) of Credit Suisse Securities USA remains unchanged. Gaël de Boissard will continue to head the fixed income business and his role as CEO of Europe, Middle East and Africa remains unchanged.

Effective October 17, 2014, Helman Sitohang will assume the role of CEO of Asia Pacific reporting directly to the Group CEO and will continue to retain his role as head of Investment Banking for Asia Pacific.

### Fair valuations

Fair value can be a relevant measurement for financial instruments when it aligns the accounting for these instruments with how we manage our business. The levels of the fair value hierarchy as defined by the relevant accounting guidance are not a measurement of economic risk, but rather an indication of the observability of prices or valuation inputs.

▸ Refer to "Note 1 – Summary of significant accounting policies" and "Note 27 – Financial instruments" in III – Condensed consolidated financial statements – unaudited for further information.

Models were used to value financial instruments for which no prices are available and which have little or no observable inputs (level 3). Models are developed internally and are reviewed by functions independent of the front office to ensure they are appropriate for current market conditions. The models require subjective assessment and varying degrees of judgment depending on liquidity, concentration, pricing assumptions and risks affecting the specific instrument. The models consider observable and unobservable parameters in calculating the value of these products, including certain indices relating to these products. Consideration of these indices is more significant in periods of lower market activity.

As of the end of 3Q14, 46% and 30% of our total assets and total liabilities, respectively, were measured at fair value.

While the majority of our level 3 assets are recorded in Investment Banking, some are recorded in Private Banking & Wealth Management's Asset Management business, specifically certain private equity investments. Total assets at fair value recorded as level 3 increased by CHF 3.7 billion during 3Q14, primarily reflecting the foreign exchange translation impact and net purchases, primarily in trading assets and loans held-for-sale.

Our level 3 assets, excluding assets attributable to noncontrolling interests and assets of consolidated variable interest entities (VIEs) that are not risk-weighted assets under the Basel framework, were CHF 33.8 billion, compared to CHF 30.2 billion as of the end of 2Q14. As of the end of 3Q14, these assets comprised 4% of total assets and 8% of total assets measured at fair value, both adjusted on the same basis, compared to 3% and 8%, respectively, as of the end of 2Q14.

We believe that the range of any valuation uncertainty, in the aggregate, would not be material to our financial condition, however, it may be material to our operating results for any particular period, depending, in part, upon the operating results for such period.

**Regulatory developments and proposals**

Government leaders and regulators continued to focus on reform of the financial services industry, including capital, leverage and liquidity requirements, changes in compensation practices and systemic risk.

On August 5, 2014, the Fed and the Federal Deposit Insurance Corporation (FDIC) announced the completion of their review of our 2013 resolution plan and the 2013 plans of the 10 other "first wave" filers. The Fed and FDIC released a joint statement indicating that the Fed and FDIC had identified shortcomings in the plans and that the Fed and FDIC expect "first wave" filers, including us, to demonstrate that they are making significant progress to address those shortcomings in their 2015 resolutions plans, due July 1, 2015. We are reviewing the specific comments the Fed and FDIC have provided on our 2013 plan, and we intend to work with the Fed and FDIC to identify appropriate actions to address them.

On September 3, 2014, US banking regulators re-proposed margin rules for non-cleared swaps and security-based swaps entered into by swap dealers, security-based swap dealers, major swap participants and major security-based swap participants that are banks. On September 18, 2014, the US Commodity Futures Trading Commission (CFTC) likewise re-proposed margin rules for non-cleared swaps entered into by swap dealers and major swap participants that are not banks. Under the re-proposals, Credit Suisse International (CSI) and Credit Suisse Securities Europe Limited (CSSEL), which have registered with the CFTC as swap dealers, would be required to collect and post initial and variation margin for non-cleared swaps and security-based swaps with US counterparties and prohibited from re-using initial margin. These margin requirements would be significantly higher than current market practice, which could adversely affect CSI's and CSSEL's derivatives sales and trading businesses by increasing the cost of and reducing demand for non-cleared swaps and security-based swaps. While the two re-proposals are intended to align with a framework recently established by the BCBS and the International Organization of Securities Commissions and a recent proposal by European supervisory agencies, differences in the scope of products and entities covered by the various proposals could impair the ability of CSI and CSSEL to engage effectively in cross-border derivatives activities. The re-proposals also would apply margin requirements to many inter-affiliate transactions, which could prevent CSI and CSSEL from engaging in certain risk management activities. The two re-proposals would follow a phased implementation schedule, with (i) variation margin requirements coming into effect on December 1, 2015, and (ii) initial margin requirements phasing in annually for different counterparties from December 1, 2015 until December 1, 2019, depending on the transactional volume of the counterparty and its affiliates during the preceding June, July and August.

On September 16, 2014, the US District Court for the District of Columbia ruled against a lawsuit brought by several US financial trade associations challenging July 2013 guidance by the CFTC regarding the cross-border application of its rules to swap dealers, such as CSI and CSSEL. Under the court's ruling, the CFTC's rules and guidance remain in effect, but the court directed the CFTC to conduct a cost-benefit analysis of some of the rules covered by the guidance. The court indicated that it did not expect this cost-benefit analysis to alter how the CFTC applies its rules. Therefore, unless the trade associations appeal the decision, significant changes to the CFTC's cross-border framework are not anticipated to result from the lawsuit. Nevertheless, the CFTC has received and is considering industry comments on certain aspects of the cross-border guidance that was the subject of the lawsuit and may yet modify the guidance. We continue to monitor these developments and prepare contingency plans to comply with the final guidance once effective.

On September 22, 2014, the Swiss Federal Council launched a consultation process on its draft Corporate Tax Reform III, consisting largely of three elements: (i) the introduction of new measures to tax mobile income in line with international standards, (ii) a proposed general reduction of cantonal income tax rates, which would also require approval at the cantonal level, and (iii) specific adjustments to enhance the corporate income tax system. The consultation process is scheduled to run until January 31, 2015.

On October 21 and 22, 2014, US federal regulators adopted a joint final rule requiring sponsors of asset-backed securitization transactions to retain 5% of the credit risk of the assets subject of the securitization. The final rule will take effect (i) for residential mortgage-backed securities transactions (RMBS), one year after its publication in the Federal Register, and (ii) for other securitization transactions, two years after its publication in the Federal Register. The specific impact of the final rule on different asset-backed securities (ABS) markets is uncertain and will vary, and certain ABS markets may result in fewer issuances or reduced liquidity, or both, and there may in certain markets be an impact on the assets acquired by securitizations.

### RESULTS OVERVIEW

**Core Results net revenues** of CHF 6,537 million increased 20% compared to 3Q13.

In our strategic businesses, net revenues of CHF 6,287 million increased 10% compared to 3Q13, primarily reflecting higher net revenues in Investment Banking and stable net revenues in Private Banking & Wealth Management. The increase in Investment Banking was primarily driven by significant client deals across products and regions, particularly in our fixed income business. Net revenues in Private Banking & Wealth Management were stable as higher transaction- and performance-based revenues and improved other revenues were offset by lower net interest income.

In our non-strategic businesses, we reported net revenues of CHF 250 million in 3Q14, which improved compared to negative net revenues of CHF 244 million in 3Q13. Increases in Corporate Center and Investment Banking were partially offset by a decrease in Private Banking & Wealth Management. Improved results in Corporate Center primarily reflected fair value gains from movements in own credit spreads of CHF 351 million in 3Q14 compared to a fair value loss of CHF 163 million in 3Q13. Improved results in Investment Banking reflected portfolio net valuation gains and improved funding costs from proactive management of both our legacy debt instruments and trading assets. The decrease in Private Banking & Wealth Management was due to the gains on the sales of our exchange-traded funds (ETF) and secondary private equity businesses recognized in 3Q13.

▸ Refer to "Private Banking & Wealth Management", "Investment Banking" and "Corporate Center" for further information.

**Provision for credit losses** was CHF 59 million in 3Q14, with net provisions of CHF 36 million in Investment Banking and CHF 25 million in Private Banking & Wealth Management.

**Total operating expenses** of CHF 5,177 million were up 10% compared to 3Q13, primarily reflecting a 15% increase in general and administrative expenses and a 9% increase in compensation and benefits. In strategic businesses, total operating expenses of CHF 4,612 million increased 8% compared to 3Q13, mainly reflecting a 12% increase in compensation and benefits and an 8% increase in general and administrative expenses. In non-strategic businesses, total operating expenses of CHF 565 million increased 22% compared to 3Q13, primarily reflecting a 55% increase in general and administrative expenses, partially offset by a 34% decrease in compensation and benefits.

**Income tax expense** of CHF 366 million recorded in 3Q14 reflected the impact of the geographical mix of results. Overall, net deferred tax assets increased CHF 258 million to CHF 5,392 million mainly driven by foreign exchange movements as of the end of 3Q14 compared to 2Q14. Deferred tax assets on net operating losses increased CHF 232 million to CHF 990 million during 3Q14. The Core Results effective tax rate was 28.1% in 3Q14, compared to (83.0)% in 2Q14. The 2Q14 effective tax rate reflected that the majority of the litigation settlement charge was non-deductible.

▸ Refer to "Note 21 – Tax" in III – Condensed consolidated financial statements – unaudited for further information.

A significant portion of our business requires inter-regional coordination in order to facilitate the needs of our clients. The methodology for allocating our results by region is dependent on management judgment. For Wealth Management Clients and Corporate & Institutional Clients, results are allocated based on the management reporting structure of our relationship managers and the region where the transaction is recorded. For Asset Management, results are allocated based on the location of the investment advisors and sales teams. For Investment Banking, trading results are allocated based on where the risk is primarily managed and fee-based results are allocated where the client is domiciled.

### Cost savings and strategy implementation

We continued to adapt our client-focused, capital-efficient strategy to optimize our use of capital and improve our cost structure. We target cost savings of CHF 3.8 billion by the end of 2014 and more than CHF 4.5 billion by the end of 2015. These targets are measured against our annualized 6M11 expense run rate measured at constant foreign exchange rates and adjusted to exclude business realignment and other significant non-operating expenses and variable compensation expenses.

The majority of the expected future savings is expected to be realized from shared infrastructure and support services across the Group, mainly through the consolidation of fragmented and duplicate functions globally and the continued consolidation of IT applications and functions.

We have also targeted further savings within our two operating divisions. Within Private Banking & Wealth Management, we expect to deliver cost benefits from the creation of the integrated Private Banking & Wealth Management division, exiting a number of small non-strategic markets, repositioning select non-profitable onshore operations, rationalization of front office and support functions, including simplification of our operating platform, streamlining of the offshore affluent and Swiss client coverage model and from announced divestitures. Within Investment Banking, we expect to deliver cost benefits from the restructuring of our rates business, the initiatives already completed in 2012, from continuing to review and realize efficiencies across business lines and geographic regions and from continuing to refine our business mix and align resources with highest returning opportunities. We expect to incur approximately CHF 0.8 billion of costs associated with these measures during the remainder of 2014 and 2015.

We incurred CHF 93 million of business realignment costs and CHF 69 million of IT architecture simplification expenses associated with these measures in 3Q14.

▸ Refer to "Cost savings and strategy implementation" in II – Operating and financial review – Core Results – Information and developments in the Credit Suisse Annual Report 2013 for further information.

### Key performance indicators

Our key performance indicators (KPIs) for the Group and for our Private Banking & Wealth Management and Investment Banking divisions reflect our strategic plan, the regulatory environment and the market cycle. Our stated KPIs are measured on the basis of reported results.

We believe the execution of our strategic initiatives including the run-off of non-strategic operations, will enable us achieve our targets over a three to five year period across market cycles.

▸ Refer to "Key performance indicators" in Private Banking & Wealth Management and Investment Banking results for further information on divisional KPIs.

### Collaboration revenues

Collaboration revenues are calculated as the percentage of the Group's net revenues represented by the aggregate collaboration revenues arising when more than one of the Group's divisions participate in a transaction. Within the Private Banking & Wealth Management division, collaboration revenues include revenues arising from cross-selling and client referral activities between the Wealth Management Clients and Corporate & Institutional Clients businesses on the one hand and the Asset Management and the securities trading and sales businesses on the other hand.

▸ Refer to "Key performance indicators" in II – Operating and financial review – Core Results – Information and developments in the Credit Suisse Annual Report 2013 for further information on key performance indicators including collaboration revenues.

## Key performance indicators

Our KPIs are targets to be achieved over a three to five year period across market cycles. As such, year to date results may be more meaningful than individual quarterly results. Our KPIs are assessed annually as part of our normal planning process and may be revised to reflect our strategic plan, the regulatory environment and market and industry trends.

1 Source: Bloomberg. Total shareholder return is calculated as equal to the appreciation or depreciation of a particular share, plus any dividends, over a given period, expressed as a percentage of the share's value at the beginning of the period.
2 The peer group for this comparison comprises Bank of America, Barclays, BNP Paribas, Citigroup, Deutsche Bank, Goldman Sachs, HSBC, JPMorgan Chase, Morgan Stanley, Nomura, Société Générale and UBS. The total shareholder return of this peer group is calculated as a simple, unweighted average of the return reported by Bloomberg for each of the members of the peer group.
3 Updated in 1Q14 from a previous target of a Look-through Swiss Core Capital ratio above 10%.

### Personnel

Headcount at the end of 3Q14 was 45,500, up 400 from 2Q14 and down 900 from 3Q13. The increase in 3Q14 reflected seasonal graduate hiring and contractor employee conversion, partially offset by a decrease in headcount resulting from our cost efficiency initiatives. The decrease from 3Q13 primarily reflected a headcount decrease in Investment Banking due to our cost efficiency initiatives.

## Number of employees by division

[1] Core Results include the results of our integrated banking business, excluding revenues and expenses in respect of noncontrolling interests without SEI.
[2] Calculated using income after tax denominated in CHF; assumes tax rate of 30% in 3Q14, 2Q14 and 3Q13 and capital allocated based on average of 10% of average risk-weighted assets and 2.4% of average leverage exposure.
[3] Represents risk-weighted assets on a fully phased-in "look-through" basis.

### Compensation and benefits

Compensation and benefits for a given year reflect the strength and breadth of the business results and staffing levels and include fixed components, such as salaries, benefits and the amortization of share-based and other deferred compensation from prior-year awards, and a discretionary variable component.

The variable component reflects the performance-based variable compensation for the current year. The portion of the performance-based compensation for the current year deferred through share-based and other awards is expensed in future periods and is subject to vesting and other conditions.

▸ Refer to "Compensation and benefits" in II – Operating and financial review – Core Results – Information and developments in the Credit Suisse Annual Report 2013 for further information.

# Private Banking & Wealth Management

In 3Q14, we reported income before taxes of CHF 943 million and net revenues of CHF 3,125 million.

In our strategic businesses, we reported income before taxes of CHF 872 million and net revenues of CHF 2,939 million. Compared to 3Q13, income before taxes increased 8%, mainly driven by lower operating expenses reflecting continued cost efficiency gains. Net revenues were stable compared to 3Q13 as higher transaction- and performance-based revenues and improved other revenues were offset by lower net interest income. Compared to 2Q14, income before taxes was stable reflecting stable net revenues and stable operating expenses.

In our non-strategic businesses, we reported income before taxes of CHF 71 million which included a CHF 109 million gain on the sale of our domestic private banking business booked in Germany.

In 3Q14, assets under management for the division were CHF 1,366.1 billion and we attracted net new assets of CHF 7.4 billion.

# Strategic results

### OVERVIEW

Our strategic results comprise businesses from Wealth Management Clients, Corporate & Institutional Clients and Asset Management.

In 3Q14, our strategic businesses reported income before taxes of CHF 872 million and net revenues of CHF 2,939 million.

Compared to 3Q13, net revenues were stable with higher transaction- and performance-based revenues and improved other revenues offset by lower net interest income. Net revenues benefitted from the appreciation of the US dollar and were stable compared to 2Q14 with improved other revenues offset by lower transaction- and performance-based revenues. Provision for credit losses was CHF 26 million on a net loan portfolio of CHF 231 billion. Total operating expenses were 3% lower compared to 3Q13 and stable compared to 2Q14.

[1] Calculated using income after tax denominated in CHF; assumes tax rate of 30% in 3Q14, 2Q14, 3Q13, 9M14 and 29% in 9M13 and capital allocated on average of 10% of average risk-weighted assets and 2.4% of average leverage exposure.

### RESULTS DETAIL

The following provides a comparison of our 3Q14 strategic results versus 3Q13 (YoY) and versus 2Q14 (QoQ).

#### Net revenues

Net interest income includes a term spread credit on stable deposit funding and a term spread charge on loans. Recurring commissions and fees includes investment product management, discretionary mandate and other asset management-related fees and fees for general banking products and services. Transaction- and performance-based revenues arise primarily from brokerage and product issuing fees, foreign exchange fees from client transactions, performance-based fees related to assets under management and custody assets, trading and sales income, placement fees, equity participations income and other transaction-based income. Other revenues include investment-related gains and losses and equity participations and other gains and losses.

**YoY: Stable at CHF 2,939 million**

Net revenues were stable with higher transaction- and performance-based revenues and improved other revenues offset by lower net interest income. Transaction- and performance-based revenues were higher reflecting higher brokerage and product issuing fees, significantly higher corporate advisory fees and a gain related to a more capital-efficient positioning of our liquidity portfolio, partially offset by lower foreign exchange client business and significantly lower performance fees and carried interest. Other revenues improved due to an equity participations impairment in 3Q13 and higher investment-related gains in 3Q14. In a low interest rate environment, net interest income decreased due to significantly lower deposit margins on slightly higher average deposit volumes partially offset by stable loan margins on higher average loan volumes. Recurring commissions and fees were stable with higher discretionary mandate management fees, slightly higher investment account and services fees and slightly higher asset management fees offset by lower banking services fees and lower investment product management fees.

**QoQ: Stable at CHF 2,939 million**

Net revenues were stable with improved other revenues offset by lower transaction- and performance-based revenues. Improved other revenues mainly reflected a higher fair value loss on the

Clock Finance transaction in 2Q14. The decrease in transaction- and performance-based revenues reflected significantly lower performance fees and carried interest, seasonally lower brokerage and product issuing fees and lower sales and trading income, partially offset by higher corporate advisory fees. Recurring commissions and fees were stable with higher investment product management fees offset by slightly lower asset management and banking services fees. Net interest income was stable with slightly higher loan margins on slightly higher average loan volumes offset by lower deposit margins on stable average deposit volumes. Revenues in 3Q14, mainly in Wealth Management Clients, benefitted from the appreciation of the US dollar.

### Provision for credit losses

The Wealth Management Clients loan portfolio is substantially comprised of residential mortgages in Switzerland and loans collateralized by securities. Our Corporate & Institutional Clients loan portfolio has relatively low concentrations and is mainly secured by mortgages, securities and other financial collateral.

**YoY: Up 100% from CHF 13 million to CHF 26 million**

Wealth Management Clients recorded net provisions of CHF 17 million and Corporate & Institutional Clients recorded net provisions of CHF 9 million in 3Q14. The increase mainly reflected Corporate & Institutional Clients' net provisions in 3Q14 compared to net releases in 3Q13.

**QoQ: Down 13% from CHF 30 million to CHF 26 million**

Provision for credit losses was stable in Wealth Management Clients and lower in Corporate & Institutional Clients. In 2Q14, Wealth Management Clients recorded net provisions of CHF 17 million while Corporate & Institutional Clients recorded net provisions of CHF 13 million.

### Operating expenses

#### Compensation and benefits

**YoY: Down 5% from CHF 1,205 million to CHF 1,150 million**

Lower compensation and benefits mainly reflected lower salary expenses, driven by lower headcount.

**QoQ: Down 3% from CHF 1,184 million to CHF 1,150 million**

Slightly lower compensation and benefits reflected lower social security costs and lower discretionary compensation expenses.

#### General and administrative expenses

**YoY: Stable at CHF 731 million**

General and administrative expenses were stable with higher litigation provisions offset by lower infrastructure and occupancy expenses.

**QoQ: Up 9% from CHF 672 million to CHF 731 million**

Higher general and administrative expenses reflected higher litigation provisions partially offset by lower professional services fees and lower travel and entertainment expenses.

## WEALTH MANAGEMENT CLIENTS

### Net revenues

#### Net interest income

**YoY: Down 9% from CHF 766 million to CHF 695 million**

Lower net interest income reflected the low interest rate environment, significantly lower deposit margins on stable average deposit volumes, slightly lower loan margins on higher average loan volumes and lower levels of deposits eligible as stable funding.

**QoQ: Stable at CHF 695 million**

Net interest income was stable with slightly higher loan margins on slightly higher average loan volumes, offset by lower deposit margins on stable average deposit volumes.

#### Recurring commissions and fees

**YoY: Stable at CHF 744 million**

Recurring commissions and fees were stable with higher discretionary mandate management fees and slightly higher investment account and services fees offset by lower banking services fees and lower investment product management fees.

**QoQ: Up 2% from CHF 728 million to CHF 744 million**

Recurring commissions and fees were slightly higher with higher investment product management fees, higher discretionary mandate management fees and slightly higher investment account and services fees partially offset by slightly lower banking services fees.

#### Transaction- and performance-based revenues

**YoY: Up 10% from CHF 549 million to CHF 603 million**

Higher transaction- and performance-based revenues reflected higher brokerage and product issuing fees, significantly higher corporate advisory fees arising from integrated solutions revenues and a gain related to a more capital-efficient positioning of our liquidity portfolio, partially offset by lower foreign exchange client business.

**QoQ: Stable at CHF 603 million**

Transaction- and performance-based revenues were stable reflecting significantly higher corporate advisory fees and the gain related to a more capital-efficient positioning of our liquidity portfolio offset by seasonally lower brokerage and product issuing fees and lower sales and trading income.

Beginning in 2Q13, fees collected in an agent role in connection with certain customized fund services we provide to clients where those fees are passed on directly to a third-party investment manager are now presented on a net basis per the applicable accounting standards. These fees were previously recorded on a gross basis as fee income and commission expense. Prior periods have been restated to conform to the current presentation.

[1] Net revenues divided by average assets under management.

[2] Income before taxes divided by average assets under management.

### Gross margin

Our gross margin was 97 basis points in 3Q14, eight basis points lower compared to 3Q13, mainly reflecting the continued adverse interest rate environment and an 8.1% increase in average assets under management. Compared to 2Q14, our gross margin was down two basis points due to a 3.3% increase in average assets under management driven by the appreciation of the US dollar.

### Net margin

Our net margin was 25 basis points in 3Q14, one basis point lower compared to 3Q13, with lower net interest income partially offset by higher transaction- and performance-based revenues and slightly lower operating expenses. Compared to 2Q14, our net margin was three basis points lower, driven by higher litigation provisions.

## CORPORATE & INSTITUTIONAL CLIENTS

### Net revenues

#### Net interest income

**YoY: Down 2% from CHF 278 million to CHF 273 million**

The slight decrease reflected the low interest rate environment, lower levels of deposits eligible as stable funding and significantly lower deposit margins on higher average deposit volumes, partially offset by higher loan margins on higher average loan volumes.

**QoQ: Up 3% from CHF 266 million to CHF 273 million**

Slightly higher net interest income reflected higher loan margins on slightly higher average loan volumes, partially offset by lower deposit margins on stable average deposit volumes.

#### Recurring commissions and fees

**YoY: Down 3% from CHF 117 million to CHF 113 million**

Recurring commissions and fees decreased slightly with no significant movements across major categories.

**QoQ: Stable at CHF 113 million**

Recurring commissions and fees were stable reflecting higher investment product management fees and higher banking services fees, offset by lower discretionary mandate management fees.

#### Transaction- and performance-based revenues

**YoY: Up 2% from CHF 105 million to CHF 107 million**

Slightly higher transaction- and performance-based revenues reflected significantly higher corporate advisory fees.

**QoQ: Down 9% from CHF 118 million to CHF 107 million**

Lower transaction- and performance-based revenues mainly reflected lower sales and trading income.

# ASSET MANAGEMENT

## Net revenues

### Fee-based revenues

**YoY: Stable at CHF 398 million**

Fee-based revenues were stable with higher equity participations income and slightly higher asset management fees due to higher average assets under management offset by lower performance fees, in particular from credit products.

**QoQ: Down 7% from CHF 428 million to CHF 398 million**

The decrease in fee-based revenues was mainly driven by significantly lower performance fees and significantly lower carried interest on realized private equity gains, partially offset by higher equity participations income and higher transaction fees. Lower performance fees mainly reflected lower fees from credit products and lower fees from single manager hedge funds.

### Investment-related gains/(losses)

**YoY: Up from CHF (2) million to CHF 11 million**

Investment-related gains were higher compared to 3Q13 reflecting gains in hedge fund investments.

**QoQ: Up 83% from CHF 6 million to CHF 11 million**

Investment-related gains were higher in 3Q14 primarily due to gains in hedge fund investments.

### Equity participations and other gains/(losses)

**YoY: Up from CHF (18) million to zero**

In 3Q13, we recognized an impairment of CHF 18 million related to Asset Management Finance LLC.

**QoQ: Down from CHF 3 million to zero**

In 2Q14, we recognized the gain from the sale of an equity stake in a joint venture.

# Non-strategic results

## OVERVIEW

Our non-strategic businesses for Private Banking & Wealth Management include positions relating to the restructuring of the former Asset Management division, run-off operations relating to our small markets exit initiative and certain legacy cross-border related run-off operations, litigation costs, primarily related to US cross-border matters, the impact of restructuring our German onshore operations, other smaller non-strategic positions formerly in our Corporate & Institutional Clients business and the run-off and active reduction of selected products.

In 3Q14, our non-strategic businesses reported income before taxes of CHF 71 million including a CHF 109 million gain on the sale of our domestic private banking business booked in Germany. In 2Q14, our non-strategic businesses reported a loss before taxes of CHF 1,631 million, driven by the litigation settlement charge of CHF 1,618 million relating to the final settlement of all outstanding US cross-border matters.

## RESULTS DETAIL

The following provides a comparison of our 3Q14 non-strategic results versus 3Q13 (YoY) and versus 2Q14 (QoQ).

### Net revenues

**YoY: Down 51% from CHF 382 million to CHF 186 million**

Net revenues were lower due to the gains on the sales of our ETF and secondary private equity businesses recognized in 3Q13.

**QoQ: Up 63% from CHF 114 million to CHF 186 million**

The increase mainly reflected the CHF 109 million gain from the sale of our domestic private banking business booked in Germany.

### Operating expenses

**YoY: Down 23% from CHF 151 million to CHF 116 million**

Lower operating expenses reflected the reduction in headcount due to the winding down of our non-strategic portfolio.

**QoQ: Down 93% from CHF 1,752 million to CHF 116 million**

Lower operating expenses were driven by the CHF 1,618 million litigation settlement charge relating to the final settlement of all outstanding US cross-border matters recognized in 2Q14.

### Business developments

In 3Q14, we completed the sale of our domestic private banking business booked in Germany to ABN AMRO.

# Assets under management

In 3Q14, assets under management of CHF 1,366.1 billion increased CHF 36.4 billion compared to the end of 2Q14, driven mainly by favorable foreign exchange-related movements resulting from the appreciation of the US dollar, positive market movements and net new assets.

In our strategic portfolio, Wealth Management Clients contributed net new assets of CHF 5.1 billion in 3Q14 with continued strong inflows from emerging markets, particularly in Asia Pacific, partially offset by Western European cross-border outflows. Corporate & Institutional Clients in Switzerland reported net new assets of CHF 0.9 billion in 3Q14. Asset Management reported net new assets of CHF 3.3 billion in 3Q14, driven mainly by inflows in traditional products, including inflows from a joint venture in emerging markets, credit products and private equity investments.

Assets under management in our non-strategic portfolio decreased by CHF 12.5 billion compared to 2Q14, driven by the sale of our domestic private banking business booked in Germany.

# Investment Banking

In 3Q14, Investment Banking reported income before taxes of CHF 516 million and net revenues of CHF 3,303 million. Investment Banking delivered solid results and profitability, reflecting strong client activity and sustained market shares across most of our businesses. Net revenues in the strategic businesses increased 24% compared to subdued 3Q13 levels, driven by significant client deals across products and regions, particularly in our fixed income business.

Compared to 2Q14, net revenues were stable in our strategic businesses, reflecting resilient operating conditions across many of our businesses. In 3Q14, we made continued progress in winding down the non-strategic unit, reducing Swiss leverage exposure by USD 11 billion to USD 66 billion and Basel III risk-weighted assets by USD 2 billion to USD 12 billion, each compared to 2Q14.

# Strategic results

### OVERVIEW

In 3Q14, our strategic businesses reported income before taxes of CHF 995 million and net revenues of CHF 3,419 million.

Fixed income sales and trading revenues were substantially higher compared to 3Q13, driven by higher client activity resulting in significant gains across most products. Revenues were also higher compared to 2Q14, reflecting continued favorable operating conditions across many of the businesses.

Equity sales and trading results were slightly lower compared to both 3Q13 and 2Q14 as weaker performance in systematic market making and cash equities offset strength in derivatives and prime services.

Underwriting and advisory results were strong compared to 3Q13, driven by robust debt and equity underwriting performance and higher advisory revenues. Revenues were flat compared to 2Q14, consistent with a slowdown in industry-wide activity.

Total operating expenses increased 17% compared to 3Q13, primarily driven by higher discretionary compensation expenses. Compared to 2Q14, total operating expenses increased slightly.

During the quarter, we reported Basel III risk-weighted assets of USD 159 billion, a reduction of USD 7 billion compared to 2Q14. This decrease was primarily driven by reductions in our prime services and global macro products franchises. At the end of 3Q14, we reported Swiss leverage exposure of USD 791 billion, an increase of USD 14 billion from 2Q14.

The following provides a comparison of our strategic 3Q14 results versus 3Q13 (YoY) and versus 2Q14 (QoQ). Share of wallet refers to our share of the overall fee pool for the respective products.

### Net revenues

#### Debt underwriting

**YoY: Up 22% from CHF 424 million to CHF 519 million**

We had significantly higher revenues, reflecting strong leveraged finance performance. The increase was partially offset by lower investment grade revenues, as a decline in the overall investment grade fee pool offset an increase in our share of wallet.

**QoQ: Up 7% from CHF 483 million to CHF 519 million**

Results reflected higher revenues from structured lending in emerging markets. The increase was partially offset by lower leveraged finance revenues as a decline in the overall leveraged finance fee pool more than offset an increase in our share of wallet. Investment grade revenues were also lower, reflecting a decline in industry activity.

#### Equity underwriting

**YoY: Up 66% from CHF 129 million to CHF 214 million**

Results reflected significantly higher revenues from IPOs, including the landmark Alibaba transaction. We had significantly higher results from convertibles, reflecting an increase in both our share of wallet and the overall convertibles fee pool. Results also reflected higher revenues from follow-on offerings.

**QoQ: Down 20% from CHF 268 million to CHF 214 million**

We had lower revenues in IPOs and follow-on offerings, consistent with a decline in overall industry volumes following strong 2Q14 activity.

[1] Calculated using income after tax denominated in USD; assumes tax rate of 30% in 3Q14, 2Q14, 3Q13, 9M14 and 28% in 9M13 and capital allocated based on average of 10% of average risk-weighted assets and 2.4% of average leverage exposure.

### Advisory and other fees

**YoY: Up 12% from CHF 152 million to CHF 170 million**

Results reflected higher advisory revenues driven by an increase in the overall M&A fee pool and strong corporate activity.

**QoQ: Up 6% from CHF 161 million to CHF 170 million**

The increase was driven by higher advisory revenues, reflecting an increase in our share of wallet.

### Fixed income sales and trading

**YoY: Up 50% from CHF 1,031 million to CHF 1,551 million**

Fixed income revenues improved substantially from subdued 3Q13 levels, driven by increased client activity across many products. 3Q13 performance was adversely impacted by a significant decline in client trading activity due to rising rates and widening credit spreads as a result of the US Federal Reserve's announcement to reduce its bond buying program. Revenues in our diversified securitized products franchise were robust, reflecting higher results in non-agency and agency securities and continued momentum in asset finance. A significant improvement in emerging markets results was driven by higher trading revenues across local markets and solid client financing activity. Revenues in global macro products improved, reflecting higher market volatility and increased client activity, particularly in our foreign exchange business. Global credit products revenues were solid, albeit lower, reflecting weaker leverage finance trading performance as increased market volatility had an adverse impact on revenues.

**QoQ: Up 6% from CHF 1,470 million to CHF 1,551 million**

Fixed income sales and trading revenues were higher, driven by continued favorable operating conditions across many of our businesses. We had significantly higher emerging markets revenues driven by robust origination and trading activity. Higher global macro products revenues were driven by improved foreign exchange results. Securitized products revenues were robust, primarily driven by strong asset finance results and higher agency revenues. Global credit products revenues declined, primarily driven by lower leveraged finance results, reflecting less favorable trading conditions.

### Equity sales and trading

**YoY: Down 2% from CHF 1,095 million to CHF 1,069 million**

Stable results reflected muted trading activity. Systematic market making results were substantially lower compared to a strong 3Q13 performance, which included the positive impact of quantitative easing in Japan. Cash equities revenues also declined due to reduced commission revenues as a result of lower US market volumes and subdued activity in Brazil. Derivatives revenues increased significantly, driven by strong growth in fee-based products distributed by Private Banking and Wealth Management, particularly in Asia Pacific. Revenues in prime services were higher, reflecting growth in client balances and portfolio optimization initiatives.

**QoQ: Down 4% from CHF 1,119 million to CHF 1,069 million**

The decline was primarily driven by lower revenues in systematic market making and cash equities due to less favorable trading conditions. These declines were partially offset by strong derivatives revenues. Prime services revenues also increased following a strong 2Q14 performance, which included the positive impact of the seasonally strong dividend season.

## Operating expenses

### Compensation and benefits

**YoY: Up 31% from CHF 1,080 million to CHF 1,412 million**

The increase was primarily driven by higher discretionary compensation expenses, reflecting higher results. Our deferred compensation expenses from prior-year awards and salaries expenses also increased.

**QoQ: Down 4% from CHF 1,465 to CHF 1,412 million**

The decrease was driven by lower discretionary compensation expenses.

### General and administrative expenses

**YoY: Up 3% from CHF 746 million to CHF 766 million**

The increase was driven by higher litigation expenses which offset cost reductions in infrastructure initiatives.

**QoQ: Up 13% from CHF 680 million to CHF 766 million**

The increase was primarily driven by higher litigation expenses and higher UK bank levy expenses.

# Non-strategic results

## OVERVIEW

Non-strategic results for Investment Banking include the fixed income wind-down portfolio, legacy rates business, primarily non-exchange-cleared instruments and capital-intensive structured positions, commodities trading business, legacy funding costs associated with non-Basel III compliant debt instruments, as well as certain legacy litigation costs and other small non-strategic positions.

In 3Q14, we made continued progress in winding down the non-strategic unit, including the reduction of Basel III risk-weighted assets and Swiss leverage exposure. Additionally, we completed the transfer of our commodities trading business into the non-strategic unit during the quarter. We reported a loss before taxes of CHF 479 million and negative net revenues of CHF 116 million in 3Q14. Compared to 3Q13, negative net revenues were smaller, reflecting portfolio net valuation gains and improved funding costs from proactive management of both our legacy debt instruments and trading assets. We had higher negative net revenues compared to 2Q14, which included higher positive net valuation gains in the portfolio. 3Q14 results also reflected higher costs to exit positions in our legacy rates portfolio. Total operating expenses increased compared to both 3Q13 and 2Q14, driven by higher litigation provisions.

As of the end of 3Q14, we reported Basel III risk-weighted assets of USD 12 billion, down USD 9 billion from 3Q13. Additionally, we have reduced Basel III risk-weighted assets by USD 2 billion from 2Q14. This compares to our risk-weighted assets target of USD 6 billion by year-end 2015. We reported Swiss leverage exposure of USD 66 billion, a reduction of USD 28 billion from 3Q13 and a reduction of USD 11 billion from 2Q14. This compares to our target of USD 24 billion in Swiss leverage exposure by year-end 2015.

The following provides a comparison of our non-strategic 3Q14 results versus 3Q13 (YoY) and versus 2Q14 (QoQ).

### Net revenues

**YoY: From CHF 197 million to CHF 116 million**

The smaller loss reflected net valuation gains in our legacy fixed income portfolio and lower funding costs from proactive management of both our legacy debt instruments and trading assets. These positive drivers were partially offset by higher losses in the legacy rates portfolio, reflecting the costs related to exiting concentrated portfolio positions.

**QoQ: From CHF 38 million to CHF 116 million**

We had a larger loss as 2Q14 included positive net valuation gains in the portfolio. In 3Q14 we had higher losses in the legacy rates portfolio reflecting higher costs related to exiting concentrated portfolio positions.

### Total operating expenses

**YoY: Up 31% from CHF 271 million to CHF 356 million**

The increase was driven by higher litigation provisions, primarily in connection with mortgage-related matters.

**QoQ: Up 41% from CHF 252 million to CHF 356 million**

The increase was driven by higher litigation provisions, primarily in connection with mortgage-related matters.

# Corporate Center

In 3Q14, we recorded a loss before taxes of CHF 158 million compared to a loss before taxes of CHF 559 million in 3Q13.

## RESULTS OVERVIEW

Corporate Center includes parent company operations such as Group financing, expenses for projects sponsored by the Group and certain expenses and revenues that have not been allocated to the segments. It also includes consolidation and elimination adjustments required to eliminate intercompany revenues and expenses.

Corporate Center separately presents non-strategic items, which management does not consider representative of our core performance. Such items include the valuation impacts from movements in credit spreads on our own liabilities carried at fair value, certain business realignment costs, IT architecture simplification expenses, certain litigation provisions, business wind-down costs and impairments not included in the divisional non-strategic units and legacy funding costs associated with non-Basel III compliant debt instruments not included in the results of the Investment Banking non-strategic unit.

In **3Q14**, we recorded a loss before taxes of CHF 158 million compared to a loss before taxes of CHF 559 million in 3Q13. In strategic results, we recorded a loss before taxes of CHF 245 million. Non-strategic results reported income before taxes of CHF 87 million, primarily including fair value gains from movements in own credit spreads of CHF 351 million. Fair value gains of CHF 252 million on own long-term vanilla debt reflected the widening of credit spreads on senior and subordinated debt across most currencies. The fair value gains were partially offset by reclassifications to discontinued operations of CHF 106 million related to the sale of our domestic private banking business booked in Germany, IT architecture simplification expenses of CHF 69 million and business realignment costs of CHF 69 million, primarily consisting of severance and other compensation expenses relating to the Group-wide cost efficiency initiatives.

2 Represents legacy funding costs associated with non-Basel III compliant debt instruments.
3 Includes reclassifications to discontinued operations of revenues and expenses arising from the sale of ETF, secondary private equity and Customized Fund Investment Group businesses and the domestic private banking business booked in Germany.

## Impact from movements in own credit spreads

Our Core Results revenues are impacted by changes in credit spreads on fair-valued Credit Suisse long-term vanilla debt and debit valuation adjustments (DVA) relating to certain structured notes liabilities carried at fair value. Our Core Results are also impacted by fair value gains/(losses) on stand-alone derivatives relating to certain of our funding liabilities and reflect the volatility of cross-currency swaps and yield curve volatility and, over the life of the derivatives, will result in no net gains/(losses). These fair value gains/(losses) are recorded in the Corporate Center.

# Assets under management

We had net asset inflows from continuing operations of CHF 7.8 billion during 3Q14 and assets under management from continuing operations of CHF 1,366.1 billion as of the end of 3Q14.

**Assets under management**

Assets under management comprise assets that are placed with us for investment purposes and include discretionary and advisory counterparty assets.

Discretionary assets are assets for which the client fully transfers the discretionary power to a Credit Suisse entity with a management mandate. Discretionary assets are reported in the business in which the advice is provided as well as in the business in which the investment decisions take place. Assets managed by Asset Management for Wealth Management Clients, Corporate & Institutional Clients and the non-strategic business are reported in each applicable business and eliminated at the divisional level.

Advisory assets include assets placed with us where the client is provided access to investment advice but retains discretion over investment decisions.

Assets under management and net new assets include assets managed by consolidated entities, joint ventures and strategic participations. Assets from joint ventures and participations are counted in proportion to our share in the respective entity.

Assets under management from continuing operations of CHF 1,366.1 billion increased CHF 46.5 billion or 3.5% compared to the end of 2Q14, driven mainly by favorable foreign exchange-related movements resulting from the appreciation of the US dollar, positive market movements and net new assets. Compared to the end of 3Q13, assets under management from continuing operations were CHF 126.8 billion higher, primarily reflecting positive market movements, net new assets of CHF 37.4 billion and favorable foreign exchange-related movements.

▸ Refer to “Private Banking & Wealth Management” in I – Credit Suisse results and “Note 37 – Assets under management” in V – Consolidated financial statements – Credit Suisse Group in the Credit Suisse Annual Report 2013 for further information.

[1] Assets managed by Asset Management for Wealth Management Clients, Corporate & Institutional Clients and the non-strategic businesses.

### Client assets

Client assets is a broader measure than assets under management as it includes transactional and custody accounts (assets held solely for transaction-related or safekeeping/custody purposes) and assets of corporate clients and public institutions used primarily for cash management or transaction-related purposes.

### Net new assets

Net new assets include individual cash payments, security deliveries and cash flows resulting from loan increases or repayments. Interest and dividend income credited to clients, commissions, interest and fees charged for banking services are not included as they do not reflect success in acquiring assets under management. Furthermore, changes due to foreign exchange-related and market movements as well as asset inflows and outflows due to the acquisition or divestiture of businesses are not part of net new assets.

We recorded net new assets from continuing operations of CHF 7.8 billion in 3Q14.

In our strategic portfolio, Wealth Management Clients contributed net new assets of CHF 5.1 billion in 3Q14 with continued strong inflows from emerging markets, particularly in Asia Pacific, partially offset by Western European cross-border outflows. Corporate & Institutional Clients in Switzerland reported net new assets of CHF 0.9 billion in 3Q14. Asset Management reported net new assets of CHF 3.3 billion in 3Q14, driven mainly by inflows in traditional products, including inflows from a joint venture in emerging markets, credit products and private equity investments. In our non-strategic portfolio, net asset outflows of CHF 1.4 billion reflected our exit of certain businesses, of which CHF 0.4 billion were classified as discontinued operations.

# II

# Treasury, risk, balance sheet and off-balance sheet

# Liquidity and funding management

During 3Q14, we maintained a strong liquidity and funding position. The majority of our unsecured funding was generated from core customer deposits and long-term debt.

### Overview

Securities for funding and capital purposes are issued primarily by the Bank, our principal operating subsidiary and a US registrant. The Bank lends funds to its operating subsidiaries and affiliates on both a senior and subordinated basis, as needed; the latter typically to meet capital requirements, or as desired by management to support business initiatives.

Our internal liquidity risk management framework is subject to review and monitoring by the Swiss Financial Market Supervisory Authority FINMA (FINMA), other regulators and rating agencies.

▸ Refer to "Treasury management" in III – Treasury, Risk, Balance sheet and Off-balance sheet in the Credit Suisse Annual Report 2013 for further information on liquidity and funding management.

### Liquidity risk management framework

Our liquidity and funding policy is designed to ensure that funding is available to meet all obligations in times of stress, whether caused by market events or issues specific to Credit Suisse. We achieve this through a conservative asset/liability management strategy aimed at maintaining long-term funding, including stable deposits, in excess of illiquid assets. To address short-term liquidity stress, we maintain a liquidity pool, described below, that covers unexpected outflows in the event of severe market and idiosyncratic stress. Our liquidity risk parameters reflect various liquidity stress assumptions that we believe are conservative. We manage our liquidity profile at a sufficient level such that, in the event we are unable to access unsecured funding, we will have sufficient liquidity to sustain operations for an extended period of time in excess of our minimum limit.

In December 2010, the BCBS issued the Basel III international framework for liquidity risk measurement, standards and monitoring. The Basel III framework includes a liquidity coverage ratio (LCR) and a net stable funding ratio (NSFR).

The LCR, which will be phased in beginning January 1, 2015 through January 1, 2019, addresses liquidity risk over a 30-day period. The LCR aims to ensure that banks have a stock of unencumbered high-quality liquid assets available to meet short-term liquidity needs under a severe stress scenario. The LCR is comprised of two components, the value of the stock of high-quality liquid assets in stressed conditions and the total net cash outflows calculated according to specified scenario parameters. Under the BCBS requirements, the ratio of liquid assets over net cash outflows is subject to an initial minimum requirement of 60%, which will increase by 10% for four years, reaching 100% by January 1, 2019.

The NSFR, which is expected to be introduced on January 1, 2018 following an observation period which began in 2012, establishes criteria for a minimum amount of stable funding based on the liquidity of a bank's assets and activities over a one-year horizon. The NSFR is a complementary measure to the LCR and is structured to ensure that illiquid assets are funded with an appropriate amount of stable long-term funds. The NSFR is defined as the ratio of available stable funding over the amount of required stable funding and, once it becomes effective, should always be at least 100%.

Although the NSFR is not expected to be introduced until 2018 and is still subject to adjustment by the BCBS and FINMA, we began using the NSFR in 2012 as one of our primary tools, in parallel with the liquidity barometer, to monitor our structural liquidity position, plan funding and as the basis for our funds transfer pricing policy. We estimate that our NSFR under the current FINMA framework was approximately 100% as of the end of 3Q14. Our estimate is based on the definitions and methodologies outlined in the aforementioned BCBS Basel III international framework for liquidity risk measurement, standards and monitoring issued in December 2010, the Liquidity ordinance discussed below implementing the Basel III liquidity requirements into Swiss law, and other guidance and requirements of FINMA. Where requirements are unclear or left to be determined by the BCBS and FINMA, we have made our own interpretation and assumptions which may not be consistent with those of other financial institutions or what may ultimately be required by the BCBS and FINMA. The NSFR is based on regulatory metrics, the disclosure of which is not yet required, and, as such, it represents a non-GAAP financial measure.

In January 2014, the BCBS issued final LCR rules and disclosure requirements that are to be implemented as part of banks' regular disclosures after January 1, 2015. The BCBS also proposed revisions to the NSFR, which are expected to become the minimum standard by the previously announced date of January 1, 2018.

In June 2014, the Swiss Federal Council approved proposed revisions to a liquidity ordinance, adopted in November 2012 (Liquidity ordinance), which requires Swiss banks to maintain a specified liquidity standard and implements Basel III liquidity requirements into Swiss law. The purpose of the revisions is to reflect the final Basel III LCR rules in the Liquidity ordinance. Pursuant to the revisions, all Swiss banks will be subject to an LCR requirement. Systemically relevant banks like us will be subject to an initial minimum LCR requirement of 100% beginning on January 1, 2015, while other banks will be subject to an initial 60% LCR requirement, with incremental increases by 10% per year until January 1, 2019. The revisions will enter into force on January 1, 2015. Following these revisions, beginning in 2Q14 the majority of the balance sheet usage related to a portfolio of high-quality liquid assets managed by our Treasury function and previously recorded in the Corporate Center has been allocated to the business divisions to allow for a more efficient management of their business activities from an overall Group perspective with respect to LCR and Swiss leverage requirements arising from the portfolio of assets. Prior periods have been restated for the related impact on assets and Swiss leverage exposures.

Our revised liquidity principles and our liquidity risk management framework as agreed with FINMA are in line with the Basel III liquidity framework.

**Funding sources and uses**

We fund our balance sheet primarily through core customer deposits, long-term debt, including structured notes, and shareholders' equity. We monitor the funding sources, including their concentrations, according to their currency, tenor, geography and maturity, and whether they are secured or unsecured. A substantial portion of our balance sheet is match funded and requires no unsecured funding. Match funded balance sheet items consist of assets and liabilities with close to equal liquidity durations and values so that the liquidity and funding generated or required by the positions are substantially equivalent.

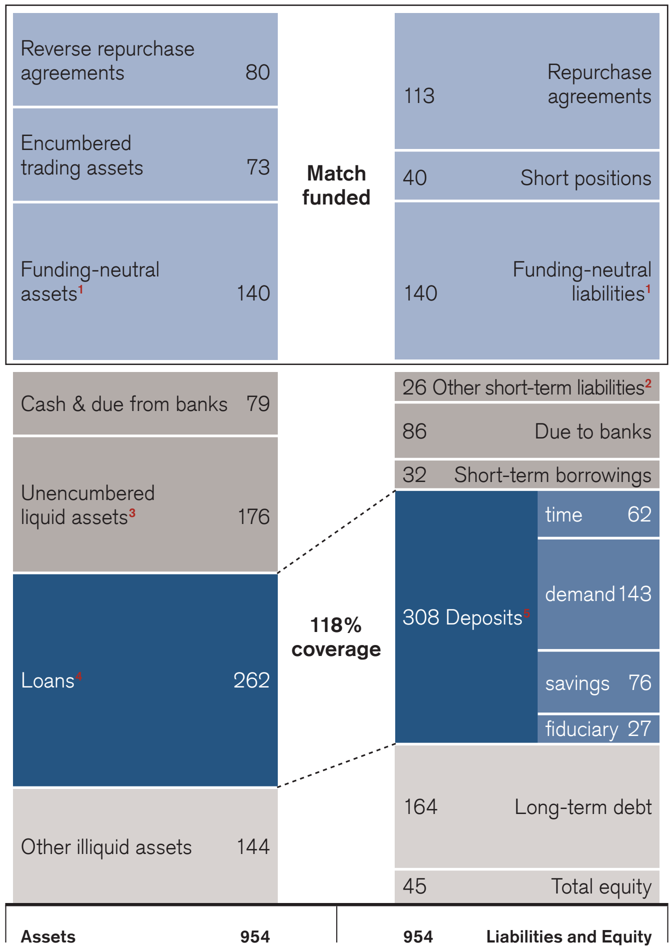
Cash and due from banks and reverse repurchase agreements are highly liquid. A significant part of our assets, principally unencumbered trading assets that support the securities business, is comprised of securities inventories and collateralized receivables that fluctuate and are generally liquid. These liquid assets are available to settle short-term liabilities.

These assets include our liquidity pool, which as of the end of 3Q14 based on our internal model was CHF 180 billion, net of a stress test level haircut. The liquidity pool consisted of CHF 58 billion of cash held at major central banks, primarily the Fed, SNB and the ECB, CHF 87 billion of securities issued by governments and government agencies, primarily of the US, Britain, France, Germany and Switzerland and CHF 35 billion of other highly liquid assets including equity securities that form part of major indices. As of September 30, 2014, our internal model included the application of a stress test level average haircut equal to approximately 33% of the market value of non-cash positions in the liquidity pool, a decrease compared to prior periods reflecting a refinement in the calculation through elimination of certain loan balances which had previously received a 100% haircut. The haircut reflects our assessment of overall market risk at the time of measurement, potential monetization capacity taking into account increased haircuts, market volatility and the quality of the relevant securities.

Loans, which comprise the largest component of our illiquid assets, are funded by our core customer deposits, with an excess coverage of 18% as of the end of 3Q14 and 2Q14, reflecting an increase in loans and in deposits. We fund other illiquid assets, including real estate, private equity and other long-term investments as well as the haircut for the illiquid portion of securities, with long-term debt and equity, in which we try to maintain a substantial funding buffer.

## Balance sheet funding structure

as of September 30, 2014 (CHF billion)



[1] Primarily includes brokerage receivables/payables, positive/negative replacement values and cash collateral.
[2] Primarily includes excess of funding neutral liabilities (brokerage payables) over corresponding assets.
[3] Primarily includes unencumbered trading assets, unencumbered investment securities and excess reverse repurchase agreements, after haircuts.
[4] Excludes loans with banks.
[5] Excludes due to banks and certificates of deposit.

Our core customer deposits totaled CHF 308 billion as of the end of 3Q14 compared to CHF 295 billion as of the end of 2Q14, reflecting a stable customer deposit base in Private Banking & Wealth Management. Core customer deposits are from clients with whom we have a broad and longstanding relationship. Core customer deposits exclude deposits from banks and certificates of deposit. We place a priority on maintaining and growing customer deposits, as they have proved to be a stable and resilient source of funding even in difficult market conditions. Our core customer deposit funding is supplemented by the issuance of long-term debt.

▸ Refer to the chart "Balance sheet funding structure" and "Balance sheet and off-balance sheet" for further information.

## Liquidity pool

| September 30, 2014 | Swiss franc | US dollar | Euro | Other currencies | Total |
|---|---|---|---|---|---|
| **Liquidity pool by currencies (CHF billion)** | | | | | |
| Cash held at central banks | 20.7 | 35.7 | 1.1 | 0.8 | 58.3 |
| Government bonds | 1.8 | 56.7 | 12.6 | 15.4 | 86.5 [1] |
| Fixed income securities | 2.0 | 2.3 | 0.7 | 3.6 | 8.6 |
| Liquid equity securities | - | 19.8 | - | 6.6 | 26.4 |
| **Total liquidy pool (based on internal model)** | **24.5** | **114.5** | **14.4** | **26.4** | **179.8** |

[1] Includes reverse repurchases of government bonds of CHF 39.2 billion.

### Debt issuances and redemptions

Our long-term debt includes senior and subordinated debt issued in US-registered offerings and medium-term note programs, euro market medium-term note programs, stand-alone offerings, structured note programs, covered bond programs, Australian dollar domestic medium-term note programs and a Samurai shelf registration statement in Japan. As a global bank, we have access to multiple markets worldwide and our major funding centers are New York, London, Zurich and Tokyo.

We use a wide range of products and currencies to ensure that our funding is efficient and well diversified across markets and investor types. Substantially all of our unsecured senior debt is issued without financial covenants, such as adverse changes in our credit ratings, cash flows, results of operations or financial ratios, which could trigger an increase in our cost of financing or accelerate the maturity of the debt. Our covered bond funding is in the form of mortgage-backed loans funded by domestic covered bonds issued through Pfandbriefbank Schweizerischer Hypothekarinstitute, one of two institutions established by a 1930 act of the Swiss Parliament to centralize the issuance of covered bonds, or from our own international covered bond program.

The table below provides information on long-term debt issuances, maturities and redemptions in 3Q14, excluding structured notes.

## Debt issuances and redemptions

| in 3Q14 | Senior | Subordinated | Long-term debt |
|---|---|---|---|
| **Long-term debt (CHF billion, notional value)** | | | |
| **Issuances** | **14.6** | **–** | **14.6** |
| of which unsecured | 12.6 | | 12.6 |
| of which secured [1] | 2.0 | – | 2.0 |
| **Maturities / Redemptions** | **0.7** | **–** | **0.7** |
| of which unsecured | 0.6 | | 0.6 |
| of which secured [1] | 0.1 | | 0.1 |

Excludes structured notes.
[1] Includes covered bonds.

As of the end of 3Q14, we had outstanding long-term debt of CHF 164 billion, which included senior and subordinated instruments. We had CHF 46.0 billion and CHF 18.9 billion of structured notes and covered bonds outstanding, respectively, as of the end of 3Q14 compared to CHF 41.7 billion and CHF 16.8 billion, respectively, as of 2Q14.

▸ Refer to “Capital issuances and redemptions” in Capital management for information on issuances of capital notes, all of which constitute subordinated debt instruments.

As of the end of 3Q14, the weighted average maturity of long-term debt was 6.4 years (including certificates of deposit with a maturity of one year or longer, but excluding structured notes, and assuming callable securities are redeemed at final maturity, or in 2030 for instruments without a stated final maturity).

Short-term borrowings increased 10% to CHF 32.3 billion as of the end of 3Q14 compared to CHF 29.4 billion in 2Q14.

### Credit ratings

The maximum impact of a simultaneous one, two or three-notch downgrade by all three major rating agencies in the Bank’s long-term debt ratings would result in additional collateral requirements or assumed termination payments under certain derivative instruments of CHF 1.3 billion, CHF 3.0 billion and CHF 4.2 billion, respectively, as of the end of 3Q14, and would not be material to our liquidity and funding planning. If the downgrade does not involve all three rating agencies, the impact may be smaller.

As of the end of 3Q14, we were compliant with the requirements related to maintaining a specific credit rating under these derivative instruments.

▸ Refer to “Credit ratings” in III – Treasury, Risk, Balance sheet and Off-balance sheet – Liquidity and funding management in the Credit Suisse Annual Report 2013 for further information.

# Capital management

As of the end of 3Q14, our CET1 ratio was 14.3% under Basel III and 9.8% on a look-through basis. Our RWA under Basel III were CHF 292.9 billion and our Swiss leverage ratio was 4.9%.

## REGULATORY CAPITAL FRAMEWORK

### Overview

Effective January 1, 2013, the Basel III framework was implemented in Switzerland along with the Swiss "Too Big to Fail" legislation and regulations thereunder (Swiss Requirements). Our related disclosures are in accordance with our current interpretation of such requirements, including relevant assumptions. Changes in the interpretation of these requirements in Switzerland or in any of our assumptions or estimates could result in different numbers from those shown in this report. Also, our capital metrics fluctuate during any reporting period in the ordinary course of business.

References to phase-in and look-through included herein refer to Basel III capital requirements. Phase-in reflects that, for the years 2014 – 2018, there will be a five-year (20% per annum) phase-in of goodwill, other intangible assets and other capital deductions (e.g., certain deferred tax assets and participations in financial institutions) and the phase-out of an adjustment for the accounting treatment of pension plans and, for the years 2013 – 2022, there will be a phase-out of certain capital instruments. Look-through assumes the full phase-in of goodwill and other intangible assets and other regulatory adjustments and the phase-out of certain capital instruments.

▸ Refer to "Capital management" in III – Treasury, Risk, Balance sheet and Off-balance sheet and "Regulation and supervision" in I – Information on the company in the Credit Suisse Annual Report 2013 for further information.

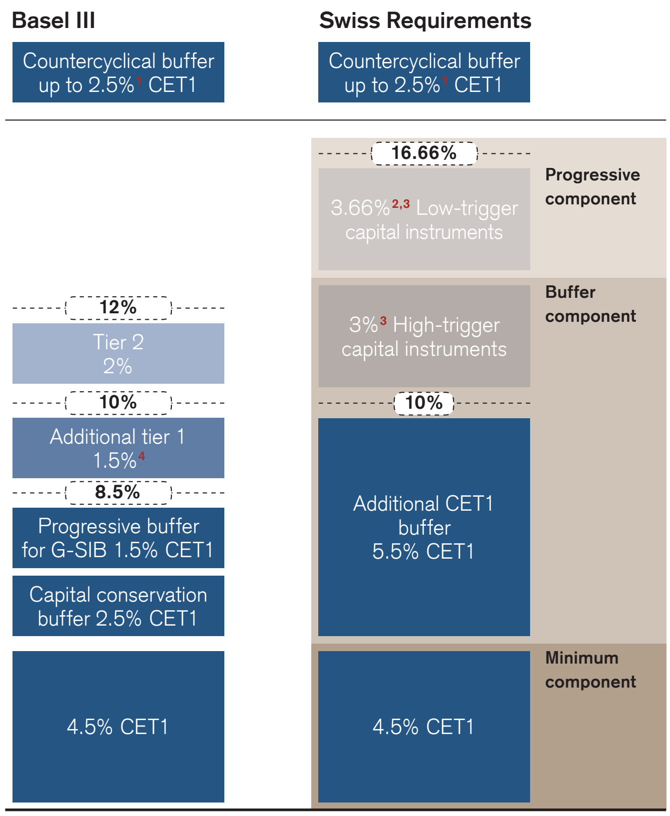
### Capital structure under Basel III

The BCBS issued the Basel III framework, with higher minimum capital requirements and conservation and countercyclical buffers, revised risk-based capital measures, a leverage ratio and liquidity standards. The framework was designed to strengthen the resilience of the banking sector and requires banks to hold more capital, mainly in the form of common equity. The new capital standards are being phased in from 2013 through 2018 and are fully effective January 1, 2019 for those countries that have adopted Basel III.

▸ Refer to the table "Basel III phase-in requirements for Credit Suisse" for capital requirements and applicable effective dates during the phase-in period.

Under Basel III, the minimum common equity tier 1 (CET1) requirement is 4.5% of risk-weighted assets (RWA). In addition, a 2.5% CET1 capital conservation buffer is required to absorb losses in periods of financial and economic stress.

### Capital frameworks for Credit Suisse



1 As of June 30, 2014, banks must hold, pursuant to both BIS and FINMA requirements, CET1 capital in the amount of 2% of RWA pertaining to mortgage loans that finance residential property in Switzerland.

2 The progressive component requirement is dependent on our size (leverage ratio exposure) and the market share of our domestic systemically relevant business and is subject to potential capital rebates that may be granted by FINMA. For 2015, FINMA increased our 2019 progressive component requirement from 3.66% to 4.05% due to the latest assessment of relevant market shares.

3 Counts towards Basel III minimum requirements as tier 1 or tier 2 capital depending on the quality of the underlying instruments.

4 Additional tier 1 instruments must provide for principal loss absorption through a conversion into common equity or write-down feature. The trigger for such a conversion or write-down must include a CET1 ratio of at least 5.125%.

A progressive buffer between 1% and 2.5% (with a possible additional 1% surcharge) of CET1, depending on a bank's systemic importance, is an additional capital requirement for global systemically important banks (G-SIB). The Financial Stability Board (FSB) has identified us as a G-SIB and requires us to maintain a 1.5% progressive buffer.

In addition to the CET1 requirements, there is also a requirement for 1.5% additional tier 1 capital and 2% tier 2 capital. These requirements may also be met with CET1 capital. To qualify as additional tier 1 under Basel III, capital instruments must provide for principal loss absorption through a conversion into common equity or a write-down of principal feature. The trigger for such conversion or write-down must include a CET1 ratio of at least 5.125%.

## Basel III phase-in requirements for Credit Suisse

| Effective January 1, for the applicable year | 2014 | 2015 | 2016 | 2017 | 2018 | 2019 |
|---|---|---|---|---|---|---|
| **Capital ratios** | | | | | | |
| CET1 | 4.0% [1] | 4.5% | 4.5% | 4.5% | 4.5% | 4.5% |
| Capital conservation buffer | | | 0.625% [1] | 1.250% [1] | 1.875% [1] | 2.5% |
| Progressive buffer for G-SIB | | | 0.375% [1] | 0.750% [1] | 1.125% [1] | 1.5% |

| Capital instruments subject to phase-out | Phased out over a 10-year horizon beginning 2013 through 2022 | | | | | |

[1] Indicates phase-in period.
[2] Includes goodwill, other intangible assets, certain deferred tax assets and participations in financial institutions.

Basel III further provides for a countercyclical buffer that could require banks to hold up to 2.5% of CET1 or other capital that would be available to fully absorb losses. This requirement is expected to be imposed by national regulators where credit growth is deemed to be excessive and leading to the build-up of system-wide risk.

Capital instruments that do not meet the strict criteria for inclusion in CET1 are excluded. Capital instruments that would no longer qualify as tier 1 or tier 2 capital will be phased out.

### Swiss Requirements

The legislation implementing the Basel III framework in Switzerland in respect of capital requirements for systemically relevant banks goes beyond Basel III's minimum standards, including requiring us, as a systemically relevant bank, to have the following minimum, buffer and progressive components.

▸ Refer to "Swiss Requirements" in III – Treasury, Risk, Balance sheet and Off-balance sheet – Capital management in the Credit Suisse Annual Report 2013 for further information.

▸ Refer to the chart "Swiss capital and leverage ratio phase-in requirements for Credit Suisse" for Swiss capital requirements and applicable effective dates during the phase-in period.

The minimum requirement of CET1 capital is 4.5% of RWA.

The buffer requirement is 8.5% and can be met with additional CET1 capital of 5.5% of RWA and a maximum of 3% of high-trigger capital instruments. High-trigger capital instruments must convert into common equity or be written off if the CET1 ratio falls below 7%.

The progressive component requirement is dependent on our size (leverage ratio exposure) and the market share of our domestic systemically relevant business. Effective in 2014, FINMA set our progressive component requirement at 3.66% for 2019. On July 28, 2014, FINMA notified us that, effective in 2015, the progressive component requirement for 2019 will be increased from 3.66% to 4.05% due to the latest assessment of our relevant market share. The progressive component requirement may be met with CET1 capital or low-trigger capital instruments. In order to qualify, low-trigger capital instruments must convert into common equity or be written off if the CET1 ratio falls below a specified percentage, the lowest of which may be 5%. In addition, until the end of 2017, the progressive component requirement may also be met with high-trigger capital instruments. Both high and low-trigger capital instruments must comply with the Basel III minimum requirements for tier 2 capital (including subordination, point-of-non-viability loss absorption and minimum maturity).

Similar to Basel III, the Swiss Requirements include a supplemental countercyclical buffer of up to 2.5% of RWA that can be activated during periods of excess credit growth. Effective September 2013, the buffer was activated and initially required banks to hold CET1 capital in the amount of 1% of their RWA pertaining to mortgages that finance residential property in Switzerland. In January 2014, upon the request of the SNB, the Swiss Federal Council increased the countercyclical buffer from 1% to 2%, effective June 30, 2014. As of the end of 3Q14, our countercyclical buffer, which applies pursuant to both Bank for International Settlements (BIS) and FINMA requirements, was CHF 299 million, which is equivalent to an additional requirement of 0.1% of CET1 capital.

In 2013, FINMA introduced increased capital charges for mortgages that finance owner occupied residential property in Switzerland (mortgage multiplier) to be phased in through January 1, 2019. The mortgage multiplier applies for purposes of both BIS and FINMA requirements.

In December 2013, FINMA issued a decree (FINMA Decree) specifying capital adequacy requirements for the Bank, on a standalone basis (Bank parent company), and the Bank and the Group, each on a consolidated basis, as systemically relevant institutions.

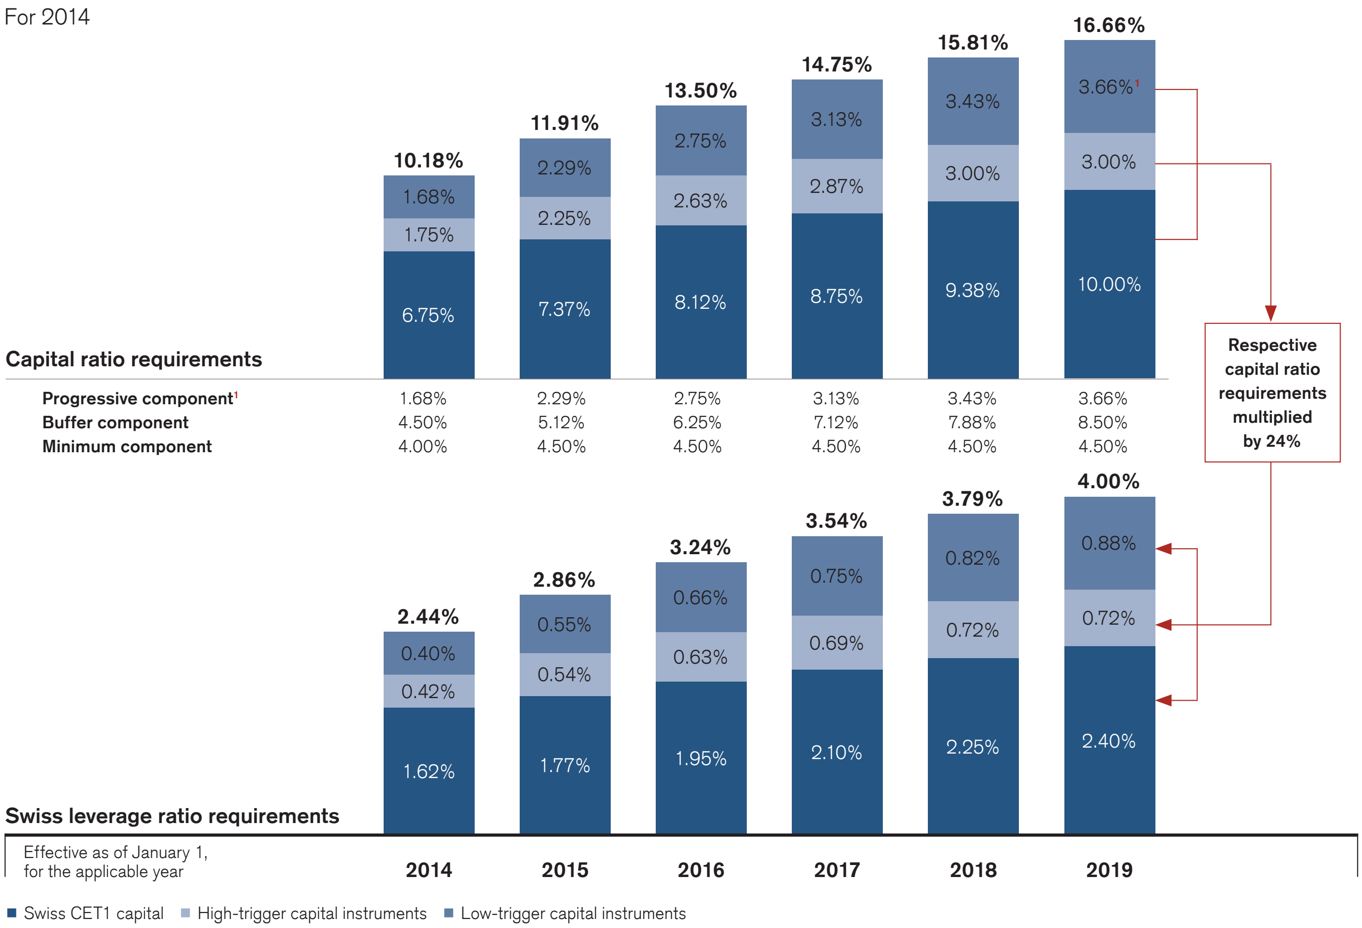
▸ Refer to "Capital management" in II – Treasury, risk, balance sheet and off-balance sheet in the Financial Report 1Q14 for further information on the FINMA Decree.

Beginning in 1Q14, we adjusted the presentation of our Swiss capital metrics and terminology and we now refer to Swiss Core Capital as Swiss CET1 capital and Swiss Total Capital as Swiss total eligible capital. Swiss Total Capital previously reflected the tier 1 participation securities, which were fully redeemed in 1Q14. Swiss CET1 capital consists of BIS CET1 capital and certain other Swiss adjustments. Swiss total eligible capital consists of Swiss CET1 capital, high-trigger capital instruments, low-trigger capital instruments and additional tier 1 instruments and tier 2 instruments subject to phase-out and phase-in deductions from CET1.

We must also comply with a leverage ratio applicable to Swiss systemically relevant banks (Swiss leverage ratio). This leverage ratio must be at least 24% of each of the respective minimum, buffer and progressive component requirements. Since the ratio is defined by reference to capital requirements subject to phase-in arrangements, the ratio will also be phased in.

### Swiss capital and leverage ratio phase-in requirements for Credit Suisse

For 2014



Excludes countercyclical buffer that was required as of September 30, 2013.

[1] The progressive component requirement is dependent on our size (leverage ratio exposure) and the market share of our domestic systemically relevant business and is subject to potential capital rebates that may be granted by FINMA. For 2015, FINMA increased our 2019 progressive component requirement from 3.66% to 4.05% due to the latest assessment of relevant market shares, which leads to a total capital ratio requirement of 17.05% and a Swiss leverage ratio requirement of 4.09%.

### Risk measurement models

Within the Basel framework for FINMA regulatory capital purposes, we implemented risk measurement models, including an incremental risk charge (IRC), stressed Value-at-Risk (VaR), risks not in VaR, comprehensive risk measure framework and advanced credit valuation adjustment (CVA).

FINMA, in line with BIS requirements, uses a multiplier to impose an increase in market risk capital for every regulatory VaR backtesting exception over four in the prior rolling 12-month period. In 3Q14, our market risk capital multiplier remained at FINMA and BIS minimum levels and we did not experience an increase in market risk capital.

▸ Refer to “Risk measurement models” in III – Treasury, Risk, Balance sheet and Off-balance sheet – Capital management in the Credit Suisse Annual Report 2013 for further information.

▸ Refer to “Market risk” in Risk management for further information on Credit Suisse’s risk measurement models and backtesting exceptions.

## REGULATORY DEVELOPMENTS AND PROPOSALS

In June 2014, FINMA released a draft circular regarding the implementation of the leverage ratio requirements in Switzerland in response to the BCBS publication of the framework and disclosure requirements for the Basel III leverage ratio. The required Basel III leverage ratio, which seeks to measure tier 1 capital against exposure, is expected to be at least 3%. Although the effective date of the Basel III leverage ratio is not until 2018, banks will be required to disclose the ratio on a consolidated basis beginning in 2015, subject to implementation by national regulators. FINMA continued this consultation in 3Q14.

## CAPITAL ISSUANCES AND REDEMPTIONS

There were no capital issuances or redemptions in 3Q14.

### Higher Trigger Capital Amount

The capital ratio write-down triggers for certain of our outstanding capital instruments take into account the fact that other outstanding capital instruments that contain relatively higher capital ratios as part of their trigger feature are expected to convert or be written down prior to the write down of such capital instruments. The amount of additional capital that is expected to be contributed by such conversion or write down is referred to as the Higher Trigger Capital Amount.

With respect to the capital instruments that specify a 5.125% trigger event if the CET1 ratio were to fall below 5.125%, the Higher Trigger Capital Amount was CHF 8.7 billion and the Higher Trigger Capital Ratio (i.e., the ratio of the Higher Trigger Capital Amount to the aggregate of all RWA of the Group) was 3.0%, both as of the end of 3Q14.

With respect to the capital instruments that specify a 5% trigger event if the CET1 ratio were to fall below 5%, the Higher Trigger Capital Amount was CHF 13.5 billion and the Higher Trigger Capital Ratio was 4.6%, both as of the end of 3Q14.

▸ Refer to the table “BIS statistics – Basel III – Group” for further information on the BIS statistics used to calculate such measures.

▸ Refer to “Capital issuances and redemptions” in III – Treasury, Risk, Balance sheet and Off-balance sheet – Capital management in the Credit Suisse Annual Report 2013 for further information on Higher Trigger Capital Amount.

## BIS CAPITAL METRICS

### Regulatory capital and ratios

Our CET1 ratio was 14.3% as of the end of 3Q14, compared to 13.8% as of the end of 2Q14, reflecting an increase in CET1 capital, partially offset by an increase in RWA. Our tier 1 ratio was 16.4% as of the end of 3Q14, compared to 16.0% as of the end of 2Q14. Our total capital ratio increased to 20.1% as of the end of 3Q14 compared to 19.5% as of the end of 2Q14.

CET1 capital was CHF 41.8 billion as of the end of 3Q14 compared to CHF 39.5 billion as of the end of 2Q14, mainly reflecting a positive foreign exchange impact, net income and the net effect of share-based compensation. CET1 capital was also impacted by a quarterly dividend accrual.

Additional tier 1 capital increased to CHF 6.3 billion and tier 2 capital increased to CHF 10.6 billion as of the end of 3Q14, mainly due to the positive foreign exchange impact.

Total eligible capital was CHF 58.8 billion as of the end of 3Q14 compared to CHF 55.6 billion as of the end of 2Q14, reflecting the increases in CET1 capital, additional tier 1 capital and tier 2 capital.

We reported a look-through CET1 ratio of 9.8% as of the end of 3Q14, compared to a year-end target of 10.0% and a long-term target of 11.0%. As of the end of 3Q14, the look-through total capital ratio was 15.9%, compared to 15.4% as of the end of 2Q14.

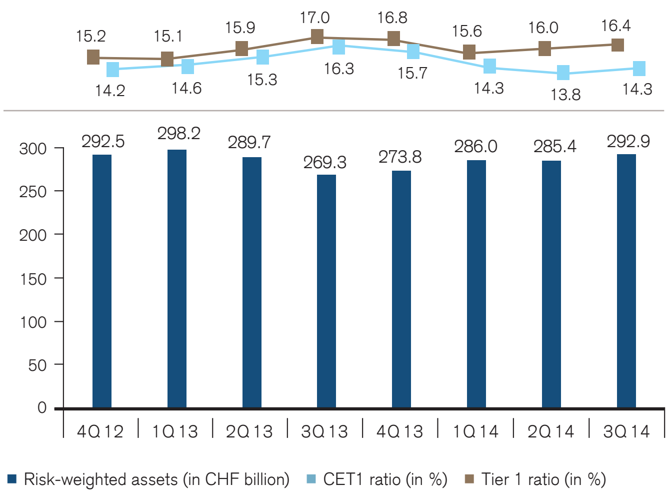
1 Includes regulatory adjustments not subject to phase-in, including a cumulative dividend accrual.
2 Reflects 20% phase-in deductions including goodwill, other intangible assets, certain deferred tax assets and 80% of an adjustment for the accounting treatment of pension plans pursuant to phase-in requirements.
3 Includes an adjustment for the accounting treatment of pension plans pursuant to phase-in requirements and other regulatory adjustments.
4 Consists of high-trigger and low-trigger capital instruments. Of this amount, CHF 6.1 billion consists of capital instruments with a capital ratio write-down trigger of 7% and CHF 4.0 billion consists of capital instruments with a capital ratio write-down trigger of 5.125%.
5 Includes hybrid capital instruments that are subject to phase-out.
6 Includes 80% of goodwill and other intangible assets (CHF 6.2 billion) and other capital deductions, including gains/(losses) due to changes in own credit risks on fair valued financial liabilities, that will be deducted from CET1 once Basel III is fully implemented.
7 Consists of high-trigger and low-trigger capital instruments. Of this amount, CHF 2.6 billion consists of capital instruments with a capital ratio write-down trigger of 7% and CHF 4.1 billion consists of capital instruments with a capital ratio write-down trigger of 5%.

### Risk-weighted assets and capital ratios – Basel III



### CET1 capital movement – Basel III

| | 3Q14 | 2Q14 |
|---|---|---|
| **CET1 capital (CHF million)** | | |
| **Balance at beginning of period** | **39,453** | **40,903** |
| Net income/(loss) | 1,025 | (700) |
| Foreign exchange impact | 1,499 | 44 |
| Other [1] | (141) | (794) |
| **Balance at end of period** | **41,836** | **39,453** |

[1] Reflects the net effect of share-based compensation, a dividend accrual and a change in other regulatory adjustments.

### Other regulatory disclosures

In connection with the implementation of Basel III, additional regulatory disclosures are required. Additional information on capital instruments, including the main features and terms and conditions of regulatory capital instruments that form part of the eligible capital base of the Group, G-SIB financial indicators, subsidiary regulatory reporting, reconciliation requirements, Pillar 3 disclosures and additional capital disclosures for the Bank parent company can be found on our website.

▸ Refer to https://www.credit-suisse.com/investors/en/regulatory_disclosures/index.jsp for additional information.

### Risk-weighted assets

Our balance sheet positions and off-balance sheet exposures translate into RWA that are categorized as market, credit, operational and non-counterparty risk RWA. When assessing RWA, it is not the nominal size, but the nature (including risk mitigation such as collateral or hedges) of the balance sheet positions or off-balance sheet exposures that determines the RWA. Market risk RWA reflect the capital requirements of potential changes in the fair values of financial instruments in response to market movements inherent in both balance sheet and off-balance sheet items. Credit risk RWA reflect the capital requirements for the possibility of a loss being incurred as the result of a borrower or counterparty failing to meet its financial obligations or as a result of a deterioration in the credit quality of the borrower or counterparty. Under Basel III, certain regulatory capital adjustments are dependent on the level of CET1 capital (thresholds). The amount above the threshold is deducted from CET1 capital and the amount below the threshold is risk weighted. RWA subject to such threshold adjustments are included in credit risk RWA. Operational risk RWA reflect the capital requirements for the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events. Non-counterparty risk RWA primarily reflect the capital requirements for our premises and equipment.

### Risk-weighted assets by division – Basel III

## Risk-weighted asset movement by risk type – Basel III

| | Credit risk (excluding CVA) | Credit risk (CVA) | Market risk | Operational risk | Non-counterparty risk | **Total risk-weighted assets** |
|---|---|---|---|---|---|---|
| **3Q14 (CHF million)** | | | | | | |
| **Balance at beginning of period** | **174,057** | **13,910** | **32,704** | **59,050** | **5,700** | **285,421** |
| Foreign exchange impact | 8,547 | 484 | 1,424 | 0 | 0 | 10,455 |
| Acquisitions and disposals | (143) | 0 | 0 | 0 | 0 | (143) |
| Movements in risk levels | (704) | 521 | (557) | 0 | 181 | (559) |
| of which credit risk – book size [1] | (37) | 550 | – | – | – | – |
| of which credit risk – book quality [2] | (667) | (29) | – | – | – | – |
| Model and parameter updates [3] | 297 | (461) | (465) | 0 | 0 | (629) |
| Methodology and policy – internal [4] | (1,145) | (1,070) | 549 | 0 | 0 | (1,666) |
| **Balance at end of period** | **180,909** | **13,384** | **33,655** | **59,050** | **5,881** | **292,879** |

[1] Represents changes in portfolio size.
[2] Represents changes in average risk weighting across credit risk classes.
[3] Represents movements arising from updates to models and recalibrations of parameters.
[4] Represents internal changes impacting how exposures are treated.

RWA increased 3% from CHF 285.4 billion as of the end of 2Q14 to CHF 292.9 billion as of the end of 3Q14, reflecting a significant increase resulting from the foreign exchange impact. Excluding the foreign exchange impact, credit risk and market risk decreased.

The decrease in **credit risk (excluding CVA)** was driven by decreases from internal methodology changes, a decrease in credit risk levels and the disposal of domestic private banking business booked in Germany, partially offset by increases in model and parameter updates. Methodology changes were mainly due to the move from a pool-based measurement approach to an individual transaction measurement approach for loans collateralized by securities within Private Banking & Wealth Management. The decrease in credit risk levels reflected a decrease in book quality in Investment Banking, primarily driven by decreases in average risk weighting for over-the-counter (OTC) derivatives in equities and lending. A slight decrease in book size reflected a securitization of an OTC derivatives portfolio in Investment Banking, which was partially offset by increases in corporate loans and loans collateralized by securities in Private Banking & Wealth Management.

The decrease in **credit risk related to CVA** was primarily driven by internal methodology changes relating to the improvement of the systems and processes with respect to over-the-counter (OTC) derivatives within Investment Banking. Decreases in model and parameter updates related to a time series update of the data set. These decreases were partially offset by movements in book size risk levels due to increased exposures and hedged positions, primarily in Private Banking & Wealth Management.

The decrease in **market risk** was primarily related to Investment Banking and was driven by movements in risk levels and model and parameter updates, partially offset by an increase due to methodology changes. Decreases in risk levels were mainly due to a reduction in trading book securitization exposures. Model and parameter updates were due to market data volatility updates. These decreases were partially offset by methodology impacts primarily driven by updates to the IRC loss given default approach relating to bonds, primarily in Investment Banking.

**Operational risk** remained unchanged.

### SWISS CAPITAL METRICS

#### Swiss regulatory capital and ratios

▸ Refer to “Swiss Requirements” for further information on Swiss regulatory requirements.

As of the end of 3Q14, our Swiss CET1 capital and Swiss total capital ratios were 14.2% and 20.0%, respectively, compared to the Swiss capital ratio phase-in requirements of 6.75% and 10.18%, respectively.

On a look-through basis, our Swiss CET1 capital was CHF 27.8 billion and our Swiss CET1 ratio was 9.7% as of the end of 3Q14. Our Swiss total eligible capital was CHF 45.4 billion and our Swiss total capital ratio was 15.8% as of the end of 3Q14, each on a look-through basis.

[2] Excludes countercyclical buffer that was required as of September 30, 2013.

### Swiss leverage ratio

The Swiss leverage ratio is calculated as Swiss total eligible capital, divided by a three-month average exposure, which consists of balance sheet assets, off-balance sheet exposures, consisting of guarantees and commitments, and regulatory adjustments, including cash collateral netting reversals and derivative add-ons. As of the end of 3Q14, our Swiss leverage ratio was 4.9% and the total average exposure was CHF 1,204.7 billion. As of the end of 3Q14, our total exposure was CHF 1,240 billion, compared to our target of approximately CHF 1,050 billion by end-2015, on a foreign exchange adjusted basis.

The Group's look-through Swiss leverage ratio was 3.8% as of the end of 3Q14, compared to the current 4% requirement effective 2019, reflecting our progressive component requirement for 2014. For 2015, the Swiss leverage ratio requirement effective 2019 will be 4.09%.

### Total shareholders' equity

Our total shareholders' equity increased to CHF 43.9 billion as of the end of 3Q14 compared to CHF 40.9 billion as of the end of 2Q14. Total shareholders' equity was positively impacted by foreign exchange-related movements on cumulative translation adjustments, net income and an increase to the share-based compensation obligation. These movements were partially offset by transactions relating to the hedging of share-based compensation awards.

▸ Refer to the "Consolidated statements of changes in equity (unaudited)" in III – Condensed consolidated financial statements – unaudited for further information on shareholders' equity.

| **Tangible book value per share** [1] | **21.98** | **20.45** | **21.34** | 7 |

[1] Management believes that tangible shareholders' equity and tangible book value per share, both non-GAAP financial measures, are meaningful as they are measures used and relied upon by industry analysts and investors to assess valuations and capital adequacy.

# Risk management

In 3Q14, overall position risk increased 3%, utilized economic capital increased 3%, average risk management VaR in US dollars increased 4% and gross impaired loans were stable at CHF 1.5 billion.

## ECONOMIC CAPITAL AND POSITION RISK

Economic capital is used as a consistent and comprehensive tool for risk management, capital management and performance measurement. It is our core Group-wide risk management tool for measuring and reporting all quantifiable risks. Economic capital measures risks in terms of economic realities rather than regulatory or accounting rules and is the estimated capital needed to remain solvent and in business, even under extreme market, business and operational conditions, given our target financial strength (our long-term credit rating).

We regularly review our economic capital methodology in order to ensure that the model remains relevant as markets and business strategies evolve. In the event of methodology changes, prior-period balances are restated in order to show meaningful trends.

In 3Q14, there were no significant changes to the position risk methodology for risk management purposes.

For utilized economic capital used for capital management purposes, we increased our other risks charge to reflect a recalibration of our economic capital model reserve component to account for upcoming methodology changes. The net impact from the change of the model reserve component on utilized economic capital for the Group as of the end of 2Q14 was an increase of CHF 460 million, or 1.4%.

‣ Refer to “Economic capital and position risk” in III – Treasury, Risk, Balance sheet and Off-balance sheet – Risk management in the Credit Suisse Annual Report 2013 for further information on economic capital and position risk.

### Key position risk trends

Position risk for risk management purposes as of the end of 3Q14 increased 3% compared to the end of 2Q14. Excluding the US dollar translation impact, position risk decreased 4%, mainly due to lower exposures in Latin America in emerging markets country event risk and reduced traded credit spread and interest rate exposures in fixed income trading.

### Position risk

Prior-period balances have been restated for methodology changes in order to show meaningful trends.
1 This category comprises fixed income trading, foreign exchange and commodity exposures.
2 This category comprises commercial and residential real estate (including RMBS and CMBS), asset-backed securities exposure, real estate acquired at auction and real estate fund investments.
3 Reflects the net difference between the sum of the position risk categories and the position risk on the total portfolio.

Compared to the end of 3Q13, position risk for risk management purposes increased 16%. Excluding the US dollar translation impact, position risk increased 11%, mainly due to new loan commitments in Investment Banking in international lending & counterparty exposures, higher risk in real estate & structured assets, mainly related to an increase in commercial mortgage-backed securities (CMBS) exposures, and increased risk in fixed income trading, primarily from higher foreign exchange exposures.

As part of our overall risk management, we hold a portfolio of hedges. Hedges are impacted by market movements, similar to other trading securities, and may result in gains or losses which offset losses or gains on the portfolios they were designated to hedge. Due to the varying nature and structure of hedges, these gains or losses may not wholly offset the losses or gains on the portfolios.

Prior-period balances have been restated for methodology changes in order to show meaningful trends.

1 Includes primarily high-trigger capital instruments, adjustments to unrealized gains on owned real estate, reduced recognition of deferred tax assets and adjustments to treatment of pensions. Economic adjustments are made to Look-through CET1 capital to enable comparison between economic capital utilization and economic capital resources under the Basel III framework.

2 Includes owned real estate risk, expense risk, pension risk, foreign exchange risk between economic capital resources and utilized economic capital, interest rate risk on treasury positions, diversification benefits, the impact from deferred share-based compensation awards and an estimate for the impacts of certain planned methodology changes.

3 Includes primarily expense risk, diversification benefits from the divisions and foreign exchange risk between economic capital resources and utilized economic capital.

4 Includes a diversification benefit of CHF 20 million, CHF 19 million, CHF 20 million and CHF 20 million as of the end of 3Q14, 2Q14, 4Q13 and 3Q13, respectively.

5 Includes a diversification benefit of CHF 19 million, CHF 19 million, CHF 20 million and CHF 21 million as of the end of 3Q14, 2Q14, 4Q13 and 3Q13, respectively.

### Utilized economic capital trends

In 3Q14, our utilized economic capital increased 3% compared to the end of 2Q14. Excluding the US dollar translation impact, utilized economic capital decreased 2%, mainly due to reduced position risk in Investment Banking.

For Private Banking & Wealth Management, utilized economic capital increased 5%, mainly due to increased position risk in equity trading & investments and in private banking corporate & retail lending.

For Investment Banking, utilized economic capital increased 4%. Excluding the US dollar translation impact, utilized economic capital decreased 3%, mainly due to reduced position risk in emerging markets country event risk and fixed income trading.

For Corporate Center, utilized economic capital decreased 8%, mainly due to a decrease in the foreign exchange risk between economic capital resources and utilized economic capital.

## MARKET RISK

### Trading portfolios

We primarily assume market risk through the trading activities in Investment Banking. Private Banking & Wealth Management also engages in trading activities, but to a much lesser extent. We are active in most of the principal trading markets of the world, using the majority of common trading and hedging products, including derivatives such as swaps, futures, options and structured products (some of which are customized transactions using combinations of derivatives and executed to meet specific client or proprietary needs). As a result of our broad participation in products and markets, our trading strategies are correspondingly diverse and exposures are generally spread across a range of risks and locations. Risks associated with the embedded derivative elements of our structured products are actively monitored and managed on a portfolio basis as part of our overall trading portfolio and are reflected in our VaR measures.

Trading risks are measured using VaR along with a number of other risk measurement tools. VaR measures the potential loss in fair value of trading positions due to adverse market movements over a defined time horizon at a specified confidence level. VaR relies on historical data and is considered a useful tool for estimating potential loss in normal markets in which there are no abrupt changes in market conditions. We use risk management VaR for internal risk management purposes and regulatory VaR for regulatory capital purposes. For risk management VaR, we use a one-day holding period and a 98% confidence level. This means there is a 1-in-50 chance of incurring a daily mark-to-market trading loss at least as large as the reported VaR. For regulatory VaR, we present one-day, 99% VaR, which is a ten-day VaR adjusted to a one-day holding period. Our VaR methodology is the same for both VaR measures, except for the confidence levels and holding periods. Other tools, including stress testing, are more appropriate for modeling the impact from severe market conditions.

We regularly review our VaR model to ensure that it remains appropriate given evolving market conditions and the composition of our trading portfolio. In 3Q14, there were no material changes to the VaR methodology.

For regulatory capital purposes, we operate under the Basel III market risk framework which includes an IRC, stressed VaR and, since January 1, 2013, consideration of the impact of changes in a counterparty's credit spreads (also known as CVA).

▸ Refer to "Market risk" in III – Treasury, Risk, Balance sheet and Off-balance sheet – Risk management in the Credit Suisse Annual Report 2013 for further information.

In order to show the aggregate market risk in our trading books, the chart entitled "Daily risk management VaR" shows the trading-related market risk on a consolidated basis.

We measure VaR in US dollars, as substantially all market risk relates to Investment Banking.

Average risk management VaR increased 4% to USD 47 million from 2Q14, driven by an increase in equity and credit spread exposures as well as higher market volatility. Compared to 3Q13, average risk management VaR increased 7%, mainly due to an increase in equity exposures, partially offset by reduced interest rate and credit spread exposures.

Period-end risk management VaR decreased 15% to USD 44 million from 2Q14, mainly reflecting reductions in equity exposures. Compared to 3Q13, period-end risk management VaR increased 13%, mainly reflecting increased equity and foreign exchange exposures.

## One-day, 98% risk management VaR and one-day, 99% regulatory VaR (CHF)

| | | | | | | | Risk management VaR (98%) | Regulatory VaR (99%) |
|---|---|---|---|---|---|---|---|---|
| in / end of | Interest rate | Credit spread | Foreign exchange | Commodity | Equity | Diversi-fication benefit | Total | Total |
| **3Q14 (CHF million)** | | | | | | | | |
| Average | 12 | 32 | 10 | 1 | 18 | (30) | 43 | 31 |
| Minimum | 10 | 29 | 6 | 1 | 14 | – [1] | 38 | 24 |
| Maximum | 15 | 35 | 15 | 2 | 23 | – [1] | 56 | 37 |
| End of period | 11 | 35 | 11 | 1 | 18 | (34) | 42 | 31 |
| **2Q14 (CHF million)** | | | | | | | | |
| Average | 13 | 30 | 8 | 2 | 16 | (29) | 40 | 30 |
| Minimum | 11 | 28 | 5 | 1 | 13 | – [1] | 35 | 25 |
| Maximum | 16 | 33 | 12 | 3 | 22 | – [1] | 46 | 36 |
| End of period | 12 | 32 | 7 | 2 | 20 | (27) | 46 | 31 |
| **3Q13 (CHF million)** | | | | | | | | |
| Average | 14 | 34 | 9 | 2 | 14 | (32) | 41 | 36 |
| Minimum | 11 | 31 | 3 | 1 | 11 | – [1] | 33 | 27 |
| Maximum | 19 | 39 | 17 | 4 | 20 | – [1] | 48 | 52 |
| End of period | 11 | 34 | 6 | 2 | 14 | (32) | 35 | 28 |

Excludes risks associated with counterparty and own credit exposures.
[1] As the maximum and minimum occur on different days for different risk types, it is not meaningful to calculate a portfolio diversification benefit.

## One-day, 98% risk management VaR and one-day, 99% regulatory VaR (USD)

| | | | | | | | Risk management VaR (98%) | Regulatory VaR (99%) |
|---|---|---|---|---|---|---|---|---|
| in / end of | Interest rate | Credit spread | Foreign exchange | Commodity | Equity | Diversi-fication benefit | Total | Total |
| **3Q14 (USD million)** | | | | | | | | |
| Average | 13 | 35 | 11 | 1 | 20 | (33) | 47 | 33 |
| Minimum | 11 | 33 | 7 | 1 | 16 | – [1] | 42 | 27 |
| Maximum | 17 | 37 | 16 | 3 | 25 | – [1] | 59 | 39 |
| End of period | 12 | 36 | 11 | 1 | 19 | (35) | 44 | 33 |
| **2Q14 (USD million)** | | | | | | | | |

| Minimum | 12 | 31 | 6 | 1 | 15 | – [1] | 40 | 28 |
| Maximum | 18 | 37 | 14 | 3 | 24 | – [1] | 52 | 41 |
| End of period | 14 | 36 | 8 | 3 | 23 | (32) | 52 | 35 |
| **3Q13 (USD million)** | | | | | | | | |
| Average | 15 | 36 | 10 | 2 | 15 | (34) | 44 | 39 |
| Minimum | 13 | 32 | 4 | 1 | 12 | – [1] | 35 | 30 |
| Maximum | 20 | 42 | 18 | 4 | 22 | – [1] | 51 | 54 |
| End of period | 13 | 37 | 7 | 2 | 16 | (36) | 39 | 31 |

Excludes risks associated with counterparty and own credit exposures.
[1] As the maximum and minimum occur on different days for different risk types, it is not meaningful to calculate a portfolio diversification benefit.

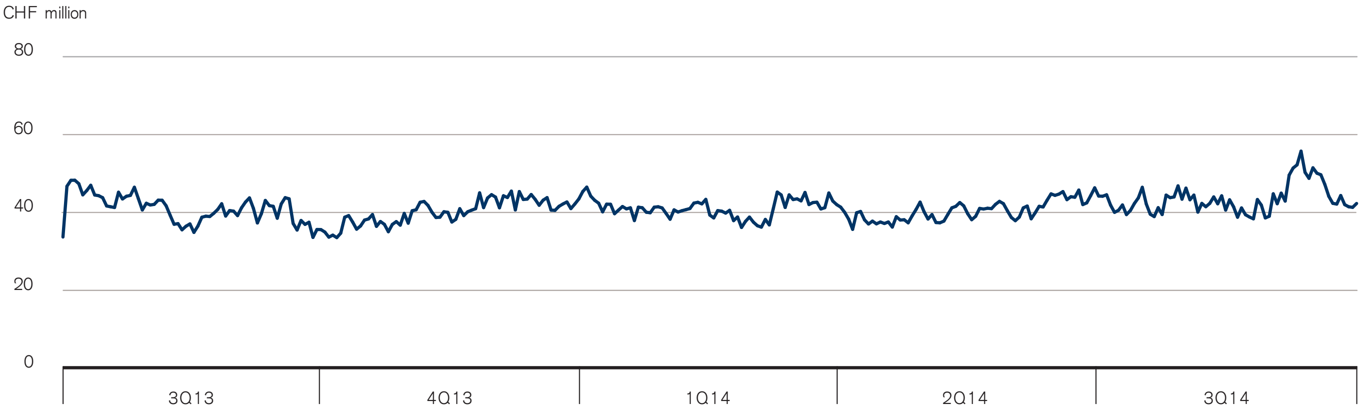
Various techniques are used to assess the accuracy of the regulatory VaR model used for trading portfolios, including backtesting. We conduct such backtesting using actual daily trading revenues. Actual daily trading revenues are compared with a regulatory 99% VaR calculated using a one-day holding period. Actual daily trading revenues for the purpose of this backtesting are defined as gains and losses arising from our trading activities, including mark-to-market gains and losses, the net cost of funding, and fees and commissions. Actual daily trading revenues do not include gains and losses resulting from valuation adjustments associated with counterparty and own credit exposures. A backtesting exception occurs when a trading loss exceeds the daily VaR estimate. We had no such backtesting exceptions in 3Q14 and in the 12-month-period through 3Q14. Since there were fewer than five backtesting exceptions in the rolling 12-month period through 2Q14, in line with BIS industry guidelines, the VaR model is deemed to be statistically valid.

For capital purposes, FINMA, in line with BIS requirements, uses a multiplier to impose an increase in market risk capital for every regulatory VaR exception over four in the prior rolling 12-month period calculated using a subset of actual daily trading revenues. The subset of actual daily trading revenues is defined on a consistent basis as the gains and losses for the regulatory VaR model but excludes non-market elements such as fees, commissions, non-market-related provisions, gains and losses from intra-day trading, cancellations and terminations.

▸ Refer to "Risk measurement models" in Capital management – Regulatory capital framework for further information on the use of our regulatory VaR model in the calculation of trading book market risk capital requirements.

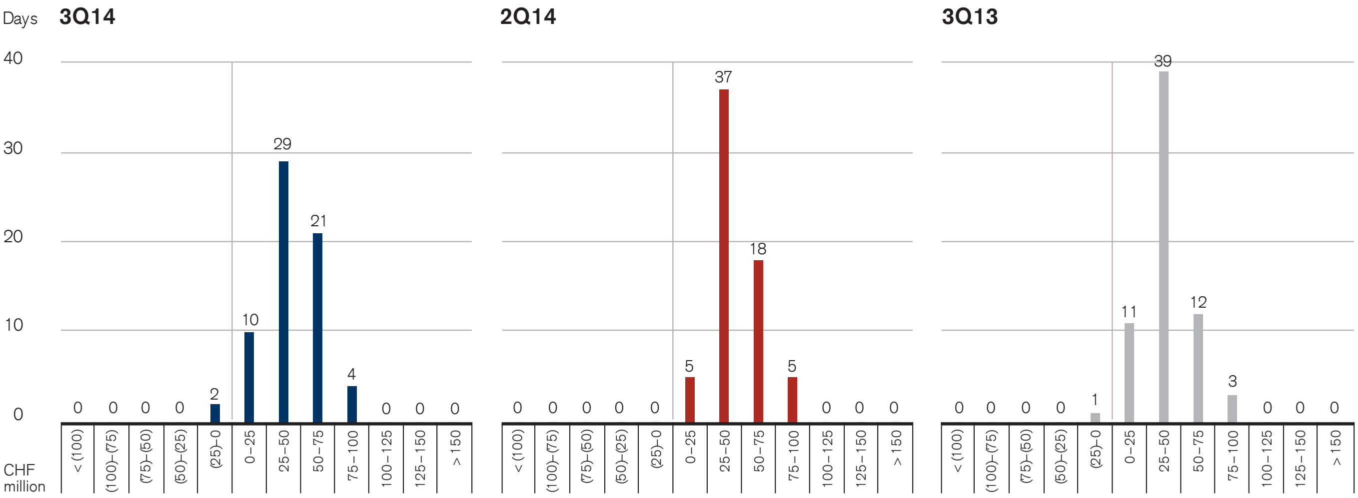
The histogram entitled "Actual daily trading revenues" compares the actual daily trading revenues for 3Q14 with those for 2Q14 and 3Q13. The dispersion of trading revenues indicates the day-to-day volatility in our trading activities. We had two trading loss days in 3Q14 and no trading loss days in 2Q14.

## Daily risk management VaR



Excludes risks associated with counterparty and own credit exposures.

## Actual daily trading revenues



Excludes Neue Aargauer Bank.
Trading revenues do not include valuation adjustments associated with counterparty and own credit exposures.

### Banking portfolios

We assume non-trading interest rate risk through interest rate-sensitive positions originated by Private Banking & Wealth Management and risk-transferred to Treasury, money market and funding activities by Treasury and the deployment of our consolidated equity as well as other activities, including market making and trading activities involving banking book positions at the divisions, primarily Investment Banking. Savings accounts and many other retail banking products have no contractual maturity date or direct market-linked interest rate and are risk-transferred from Private Banking & Wealth Management to Treasury on a pooled basis using replicating portfolios (approximating the re-pricing behavior of the underlying product). Treasury and certain other areas of the Group running interest rate risk positions actively manage the positions within approved limits. This risk is monitored on a daily basis.

The impact of a one basis point parallel increase of the yield curves on the fair value of interest rate-sensitive non-trading book positions would have amounted to a valuation increase of CHF 5.9 million as of the end of 3Q14, compared to a valuation increase of CHF 5.1 million as of the end of 2Q14.

## CREDIT RISK

Credit risk is the possibility of a loss being incurred by us as the result of a borrower or counterparty failing to meet its financial obligations or as a result of deterioration in the credit quality of the borrower or counterparty. In the event of a customer default, a bank generally incurs a loss equal to the amount owed by the debtor, less any recoveries from foreclosure, liquidation of collateral, or the restructuring of the debtor company. A change in the credit quality of a counterparty has an impact on the valuation of assets eligible for fair value measurement, with valuation changes recorded in the consolidated statements of operations.

### Sources of credit risk

The majority of our credit risk is concentrated in the Wealth Management Clients and Corporate & Institutional Clients businesses within the Private Banking & Wealth Management division and in the Investment Banking division. Credit risk exists within lending products, commitments and letters of credit, and results from counterparty exposure arising from derivatives, foreign exchange and other transactions.

Our regular review of the credit quality of clients and counterparties does not depend on the accounting treatment of the asset or commitment. We regularly review the appropriateness of allowances for credit losses. Changes in the credit quality of counterparties of loans held at fair value are reflected in valuation changes recorded directly in revenues, and therefore are not part of the impaired loans balance.

▸ Refer to "Credit risk" in III – Treasury, Risk, Balance sheet and Off-balance sheet – Risk management in the Credit Suisse Annual Report 2013 for further information on credit risk.

▸ Refer to "Note 27 – Financial instruments" in III – Condensed consolidated financial statements – unaudited for further information on counterparty credit risk.

### Credit risk overview

The following table represents credit risk from loans, irrevocable loan commitments and certain other contingent liabilities, loans held-for-sale, traded loans and derivative instruments before consideration of risk mitigation such as cash collateral and marketable securities or credit hedges. Irrevocable loan commitments include irrevocable credit facilities for Investment Banking and Private Banking & Wealth Management, but do not include unused credit limits which can be revoked at our sole discretion upon notice to the client.

## Credit risk

[1] Includes Corporate Center, in addition to Private Banking & Wealth Management and Investment Banking.
[2] Includes loans secured by financial collateral and mortgages. The value of financial collateral and mortgages, considered up to the amount of the related loans, was CHF 75,504 million, CHF 72,316 million and CHF 65,953 million as of the end of 3Q14, 2Q14 and 3Q13, respectively.
[3] Impaired loans and allowance for loan losses are only based on loans which are not carried at fair value.
[4] Excludes loans carried at fair value.

## Loan exposure

Compared to the end of 2Q14, gross loans increased CHF 10.7 billion to CHF 266.2 billion. In Private Banking & Wealth Management, gross loans were CHF 233.8 billion, up CHF 7.7 billion from 2Q14, reflecting increased lending driven by commercial and industrial loans, loans collateralized by securities, residential mortgages and the US dollar translation impact, partially offset by lower loans to financial institutions. Gross loans in Investment Banking increased CHF 3.0 billion to CHF 32.4 billion, primarily reflecting the US dollar translation impact and an increase in loans to the real estate sector.

Gross impaired loans were stable at CHF 1.5 billion. In Private Banking & Wealth Management, gross impaired loans were stable at CHF 1,232 million and mainly reflected the restructuring of potential problem loans. In Investment Banking, gross impaired loans increased CHF 17 million to CHF 251 million, mainly related to the US dollar translation impact. An increase from a new potential problem loan was offset by the repayment of a non-performing loan.

We recorded net provisions for credit losses of CHF 59 million in 3Q14, compared to CHF 18 million in 2Q14, with net provisions of CHF 36 million in Investment Banking and CHF 25 million in Private Banking & Wealth Management.

Compared to the end of 3Q13, gross loans increased 8%. An increase in Private Banking & Wealth Management of 9% was primarily due to higher commercial and industrial loans, an increase in loans collateralized by securities, higher residential mortgages, higher loans to the real estate sector and the US dollar translation impact, partially offset by a decrease in consumer finance and lower loans to financial institutions. In Investment Banking, an increase of 4% was driven by the US dollar translation impact and higher loans to governments and public institutions and to the real estate sector, partially offset by lower loans to financial institutions and a decrease in commercial and industrial loans. Gross impaired loans decreased 3% driven by decreases in potential problem and non-performing loans in Private Banking & Wealth Management, mainly due to write-offs and the restructuring of loans, and lower restructured loans in Investment Banking, partially offset by increases in restructured loans in Private Banking & Wealth Management and higher potential problem loans in Investment Banking.

## Selected European credit risk exposures

The scope of our disclosure of European credit risk exposure includes all countries of the EU which are rated below AA or its equivalent by at least one of the three major rating agencies and where our gross exposure exceeds our quantitative threshold of EUR 0.5 billion. We believe this external rating is a useful measure in determining the financial ability of countries to meet their financial obligations, including giving an indication of vulnerability to adverse business, financial and economic conditions.

### Monitoring of selected European credit risk exposures

Our credit risk exposure to these European countries is managed as part of our risk management process. The Group makes use of country limits and performs scenario analyses on a regular basis, which include analyses on our indirect sovereign credit risk exposures from our exposures to selected European financial institutions. This assessment of indirect sovereign credit risk exposures includes analysis of publicly available disclosures of counterparties' exposures to the European countries within the defined scope of our disclosure. We monitor the concentration of collateral underpinning our over-the-counter (OTC) derivative and reverse repurchase agreement exposures through monthly reporting. We also monitor the impact of sovereign rating downgrades on collateral eligibility. Strict limits on sovereign collateral from G-7 and non-G-7 countries are monitored monthly. Similar disclosure is part of our regular risk reporting to regulators.

### Presentation of selected European credit risk exposures

The basis for the presentation of the country exposure is our internal risk domicile view. The risk domicile view is based on the domicile of the legal counterparty, i.e., it may include exposure to a legal entity domiciled in the reported country where its parent is located outside of the country.

The credit risk exposure in the table and the related description of developments is presented on a risk-based view before deduction of any related allowance for loan losses. We present our credit risk exposure and related risk mitigation for the following distinct categories:

- *Gross credit risk exposure* includes the principal amount of loans drawn, letters of credit issued and undrawn portions of committed facilities, the positive replacement value (PRV) of derivative instruments after consideration of legally enforceable netting agreements, the notional value of investments in money market funds and the market values of securities financing transactions and the debt cash trading portfolio (short-term securities) netted at issuer level.
- *Risk mitigation* includes credit default swaps (CDS) and other hedges, at their net notional amount, guarantees, insurance and collateral (primarily cash, securities and, to a lesser extent, real estate, mainly for Private Banking & Wealth Management exposure to corporates & other). Collateral values applied for the calculation of the net exposure are determined in accordance with our risk management policies and reflect applicable margining considerations.
- *Net credit risk exposure* represents gross credit risk exposure net of risk mitigation.
- *Inventory* represents the long inventory positions in trading and non-trading physical debt and synthetic positions, each at market value, all netted at issuer level. Physical debt is non-derivative debt positions (e.g., bonds), and synthetic positions are created through OTC contracts (e.g., CDS purchased and/or sold and total return swaps (TRS)).

## Selected European credit risk exposures

1 Includes other hedges (derivative instruments), guarantees, insurance and collateral.
2 Represents long inventory positions netted at issuer level.
3 Substantially all of which results from CDS; represents long positions net of short positions.

CDS presented in the risk mitigation column are purchased as a direct hedge to our OTC exposure and the risk mitigation impact is considered to be the notional amount of the contract for risk purposes, with the mark-to-market fair value of CDS risk-managed against the protection provider. Net notional amounts of CDS reflect the notional amount of CDS protection purchased less the notional amount of CDS protection sold and are based on the origin of the CDS reference credit, rather than that of the CDS counterparty. CDS included in the inventory column represent contracts recorded in our trading books that are hedging the credit risk of the instruments included in the inventory column and are disclosed on the same basis as the value of the fixed income instrument they are hedging.

We do not have any tranched CDS positions on these European countries and only an insignificant amount of indexed credit derivatives is included in inventory.

The credit risk of CDS contracts themselves, i.e., the risk that the CDS counterparty will not perform in the event of a default, is managed separately from the credit risk of the reference credit. To mitigate such credit risk, all CDS contracts are collateralized and executed with counterparties with whom we have an enforceable International Swaps and Derivatives Association (ISDA) master agreement that provides for daily margining.

### Development of selected European credit risk exposures

On a gross basis, before taking into account risk mitigation, our risk-based sovereign credit risk exposure to Croatia, Cyprus, Greece, Ireland, Italy, Portugal and Spain as of the end of 3Q14 was EUR 4.9 billion, up from EUR 4.8 billion as of the end of 2Q14. Our net exposure to these sovereigns was EUR 0.8 billion, down from EUR 1.0 billion compared to the end of 2Q14. Our non-sovereign risk-based credit risk exposure in these countries as of the end of 3Q14 included net exposure to financial institutions of EUR 2.5 billion and to corporates and other counterparties of EUR 1.4 billion, compared to EUR 2.8 billion and EUR 1.6 billion, respectively, as of the end of 2Q14. A significant majority of the purchased credit protection is transacted with banks outside of the disclosed countries. For credit protection purchased from banks in the disclosed countries, such credit risk is reflected in the gross and net exposure to each respective country.

### Sovereign debt rating developments

In 3Q14, the long-term sovereign debt ratings of the countries listed in the table were affected as follows: Standard & Poor's increased Greece's rating to B from B–. Fitch decreased Croatia's rating to BB from BB+, increased Greece's rating to B from B– and increased Ireland's rating to A– from BBB+. Moody's increased Greece's rating to Caa1 from Caa3 and Portugal's rating to Ba1 from Ba2. The rating changes did not have a significant impact on the Group's financial position, result of operations, liquidity or capital resources.

## OPERATIONAL RISK

Effective January 1, 2014, we have implemented a revised FINMA-approved internal advanced measurement approach (AMA) model to calculate the regulatory capital requirement for operational risk. The AMA capital calculation includes all litigation-related provisions and also an add-on component relating to the aggregate range of the reasonably possible litigation losses that are disclosed in our financial statements but are not covered by existing provisions.

▸ Refer to "Operational risk" in III – Treasury, Risk, Balance sheet and Off-balance sheet – Risk management in the Credit Suisse Annual Report 2013 for further information on the revised AMA model used for regulatory capital calculation.

Following the changes in 2Q14, capital required for operational risk in 3Q14 remained stable with no updates to the AMA model.

# Balance sheet and off-balance sheet

Total assets were CHF 954.4 billion, total liabilities were CHF 909.4 billion and total equity was CHF 45.0 billion. Both total assets and total liabilities were up 7% for the quarter due to the foreign exchange translation impact and higher operating activities. The majority of our transactions are recorded on our balance sheet, however, we also enter into transactions that give rise to both on and off-balance sheet exposure.

## BALANCE SHEET

Total assets were CHF 954.4 billion as of the end of 3Q14, up CHF 62.8 billion, or 7%, from the end of 2Q14, reflecting the foreign exchange translation impact and an increase from operating activities. Excluding the foreign exchange translation impact, total assets increased CHF 18.1 billion.

Compared to the end of 2Q14, central bank funds sold, securities purchased under resale agreements and securities borrowing transactions increased CHF 21.5 billion, or 13%, mainly driven by the foreign exchange translation impact and an increase in customer reverse repurchase transactions, partially offset by a decrease in cash collateral for securities borrowings to customers. Cash and due from banks increased CHF 11.7 billion, or 18%, mainly driven by a higher cash position placed at the Federal Reserve Bank of New York. Net loans increased CHF 10.7 billion, or 4%, primarily reflecting increased lending driven by commercial and industrial loans, loans collateralized by securities and residential mortgages in Private Banking & Wealth Management and an increase in loans to the real estate sector in Investment Banking as well as the foreign exchange translation impact. Trading assets increased CHF 10.4 billion, or 4%, mainly reflecting the foreign exchange translation impact and an increase in derivatives instruments, partially offset by lower equity securities. Brokerage receivables increased CHF 5.2 billion, or 9%, mainly driven by the foreign exchange translation impact and an increase in margin lending balances in the prime services business. All other assets increased CHF 3.3 billion, or 3%, largely reflecting the foreign exchange translation impact.

Total liabilities were CHF 909.4 billion as of the end of 3Q14, up CHF 59.8 billion, or 7%, from the end of 2Q14, driven by the foreign exchange translation impact and an increase from operating activities. Excluding the foreign exchange translation impact, total liabilities increased CHF 16.4 billion.

Compared to the end of 2Q14, long-term debt increased CHF 19.8 billion, or 14%, primarily driven by new issuances of senior treasury debt and structured notes as well as the foreign exchange translation impact, partially offset by maturing of senior debt. Customer deposits increased CHF 16.9 billion, or 5%, mainly driven by the foreign exchange translation impact, an increase in demand and time customer deposits and an increase in investment accounts due to higher cash deposits accounts related to Swiss and German commercial and public customers. Brokerage payables were up by CHF 7.9 billion, or 11%, mainly reflecting the foreign exchange translation impact, higher margin lending balances primarily in the prime services business, higher futures balances and higher brokerage customer balances. Due to banks increased CHF 3.8 billion, or 14%, mainly driven by an increase in time deposits with banks. Trading liabilities increased CHF 2.8 billion, or 4%, mainly reflecting the foreign exchange translation impact. Central bank funds purchased, securities sold under repurchase agreements and securities lending transactions increased CHF 1.8 billion, or 2%, driven by the foreign exchange translation impact, partially offset by a decrease in repurchase transactions. All other liabilities increased CHF 6.8 billion, or 7%, largely reflecting the foreign exchange translation impact.

‣ Refer to “Funding sources and uses” in Liquidity and funding management and “Capital management” for further information, including our funding of the balance sheet and the leverage ratio.

## OFF-BALANCE SHEET

We enter into off-balance sheet arrangements in the normal course of business. Off-balance sheet arrangements are transactions or other contractual arrangements with, or for the benefit of, an entity that is not consolidated. These transactions include derivative instruments, guarantees and similar arrangements, retained or contingent interests in assets transferred to an unconsolidated entity in connection with our involvement with special purpose entities (SPEs), and obligations and liabilities (including contingent obligations and liabilities) under variable interests in unconsolidated entities that provide financing, liquidity, credit and other support.

‣ Refer to “Liquidity and funding management” in III – Treasury, Risk, Balance sheet and Off-balance sheet in the Credit Suisse Annual Report 2013 and “Note 25 – Guarantees and commitments” and “Note 29 – Litigation” in III – Condensed consolidated financial statements – unaudited for further information.

Report of Independent Registered Public Accounting Firm to the Board of Directors of

**Credit Suisse Group AG, Zurich**

We have reviewed the accompanying condensed consolidated balance sheets of Credit Suisse Group AG and subsidiaries (the "Group") as of September 30, 2014 and 2013 and the related condensed consolidated statements of operations, changes in equity and comprehensive income for the three and nine-month periods ended September 30, 2014 and 2013 and the related condensed consolidated statements of cash flows for the nine-month periods ended September 30, 2014 and 2013. These condensed consolidated financial statements are the responsibility of the Group's management.

We conducted our reviews in accordance with the standards of the Public Company Accounting Oversight Board (United States). A review of interim financial information consists principally of applying analytical procedures and making inquiries of persons responsible for financial and accounting matters. It is substantially less in scope than an audit conducted in accordance with the standards of the Public Company Accounting Oversight Board (United States), the objective of which is the expression of an opinion regarding the financial statements taken as a whole. Accordingly, we do not express such an opinion.

Based on our reviews, we are not aware of any material modifications that should be made to the condensed consolidated financial statements referred to above for them to be in conformity with U.S. generally accepted accounting principles.

We have previously audited, in accordance with standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheet of the Group as of December 31, 2013, and the related consolidated statements of operations, changes in equity, comprehensive income and cash flows for the year then ended (not presented herein); and in our report dated April 3, 2014, we expressed an unqualified opinion on those consolidated financial statements. In our opinion, the information set forth in the accompanying condensed consolidated balance sheet as of December 31, 2013, is fairly stated, in all material respects, in relation to the consolidated balance sheet from which it has been derived.

[1] Distributions to owners in funds include the return of original capital invested and any related dividends.
[2] Transactions with and without ownership changes related to fund activity are all displayed under "not changing ownership".
[3] Includes a net tax charge of CHF (36) million from the excess recognized compensation expense over fair value of shares delivered.
[4] The Group had purchased certain call options on its own shares to economically hedge share-based compensation awards. In accordance with US GAAP, these call options were designated as equity instruments and, as such, were initially recognized in shareholders' equity at their fair values and not subsequently remeasured.

# Notes to the condensed consolidated financial statements – unaudited

## 1 Summary of significant accounting policies

### Basis of presentation

The accompanying unaudited condensed consolidated financial statements of Credit Suisse Group AG (the Group) are prepared in accordance with accounting principles generally accepted in the US (US GAAP) and are stated in Swiss francs (CHF). These condensed consolidated financial statements should be read in conjunction with the US GAAP consolidated financial statements and notes thereto for the year ended December 31, 2013 included in the Credit Suisse Annual Report 2013.

‣ Refer to "Note 1 – Summary of significant accounting policies" in V – Consolidated financial statements – Credit Suisse Group in the Credit Suisse Annual Report 2013 for a description of the Group's significant accounting policies.

Certain financial information, which is normally included in annual consolidated financial statements prepared in accordance with US GAAP, but not required for interim reporting purposes, has been condensed or omitted. Certain reclassifications have been made to the prior period's consolidated financial statements to conform to the current period's presentation. These condensed consolidated financial statements reflect, in the opinion of management, all adjustments that are necessary for a fair presentation of the condensed consolidated financial statements for the periods presented. The 2Q14 consolidated statements of operations and comprehensive income, the 2Q14 and 3Q13 consolidated balance sheets and the 3Q14, 2Q14 and 3Q13 consolidated statements of changes in equity have been added for convenience of the reader and are not a required presentation under US GAAP. The results of operations for interim periods are not indicative of results for the entire year.

In preparing these condensed consolidated financial statements, management is required to make estimates and assumptions which affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities as of the date of the condensed consolidated balance sheets and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

## 2 Recently issued accounting standards

### Recently adopted accounting standards

The following provides the most relevant recently adopted accounting standards.

‣ Refer to "Note 2 – Recently issued accounting standards" in V – Consolidated financial statements – Credit Suisse Group in the Credit Suisse Annual Report 2013 for a description of accounting standards adopted in 2013.

#### ASC Topic 210 – Balance Sheet

In December 2011, the Financial Accounting Standards Board (FASB) issued Accounting Standards Update (ASU) 2011-11, "Disclosures about Offsetting Assets and Liabilities" (ASU 2011-11), an update to Accounting Standards Codification (ASC) Topic 210 – Balance Sheet. The amendments in ASU 2011-11 require an entity to prepare additional disclosures about offsetting and related arrangements. In January 2013, the FASB issued ASU 2013-01, "Clarifying the Scope of Disclosures about Offsetting Assets and Liabilities" (ASU 2013-01), an update to ASC Topic 210 – Balance Sheet. ASU 2013-01 clarifies the scope of ASU 2011-11. The adoption of ASU 2011-11 and ASU 2013-01 on January 1, 2013 did not have an impact on the Group's financial position, results of operations or cash flows.

‣ Refer to "Note 20 – Offsetting of financial assets and financial liabilities" for further information.

#### ASC Topic 220 – Comprehensive Income

In January 2013, the FASB issued ASU 2013-02, "Reporting of Amounts Reclassified Out of Accumulated Other Comprehensive Income" (ASU 2013-02), an update to ASC Topic 220 – Comprehensive Income. The amendments in ASU 2013-02 require an entity to provide information about the amounts reclassified out of accumulated other comprehensive income (AOCI) by component. The adoption of ASU 2013-02 on January 1, 2013 did not have an impact on the Group's financial position, results of operations or cash flows.

‣ Refer to "Note 19 – Accumulated other comprehensive income and additional share information" for further information.

#### ASC Topic 830 – Foreign Currency Matters

In March 2013, the FASB issued ASU 2013-05, "Parent's Accounting for the Cumulative Translation Adjustment upon Derecognition of Certain Subsidiaries or Groups of Assets within a Foreign Entity or of an Investment in a Foreign Entity" (ASU 2013-05), an update to ASC Topic 830 – Foreign Currency Matters. The amendments in ASU 2013-05 provide guidance for the treatment of the cumulative translation adjustment when an entity ceases to hold a controlling financial interest in a subsidiary or group of assets within a foreign entity. ASU 2013-05 is effective prospectively for interim and annual reporting periods beginning after December 15, 2013 with early adoption permitted. The Group elected to early adopt ASU 2013-05 on January 1, 2013 which did not have a material impact on the Group's financial position, results of operations or cash flows.

### ASC Topic 946 – Financial Services – Investment Companies

In June 2013, the FASB issued ASU 2013-08, "Amendments to the Scope, Measurement, and Disclosure Requirements" (ASU 2013-08) an update to ASC Topic 946 – Financial Services – Investment Companies. The amendments in ASU 2013-08 change the approach to the investment company assessment in ASC Topic 946, clarify the characteristics of an investment company and provide comprehensive guidance for assessing whether an entity is an investment company. The adoption of ASU 2013-08 on January 1, 2014 did not have a material impact on the Group's financial position, results of operations or cash flows.

**Standards to be adopted in future periods**

### ASC Topic 205 – Presentation of Financial Statements

In August 2014, the FASB issued ASU 2014-15, "Disclosure of Uncertainties about an Entity's Ability to Continue as a Going Concern" (ASU 2014-15), an update to ASC Topic 205 – Presentation of Financial Statements. The amendments in ASU 2014-15 provide guidance in US GAAP about management's responsibility to evaluate whether there are conditions and events, considered in the aggregate, that raise substantial doubt about an entity's ability to continue as a going concern and to provide related disclosures in the notes to the financial statements. The amendments are expected to reduce diversity in the timing and content of such disclosures. ASU 2014-15 is effective for the annual reporting period ending after December 15, 2016, and for the interim and annual reporting periods thereafter. Early adoption is permitted. As these amendments relate only to disclosures, there will be no impact of the adoption of ASU 2014-15 on the Group's financial position, results of operations and cash flows.

### ASC Topic 205 – Presentation of Financial Statements
### ASC Topic 360 – Property, Plant, and Equipment

In April 2014, the FASB issued ASU 2014-08, "Reporting Discontinued Operations and Disclosures of Disposals of Components of an Entity" (ASU 2014-08), an update to ASC Topic 205 – Presentation of Financial Statements and ASC Topic 360 – Property, Plant, and Equipment. The amendments in ASU 2014-08 change the requirements for reporting discontinued operations and require additional disclosures about discontinued operations. ASU 2014-08 is effective for interim and annual reporting periods beginning after December 15, 2014 with early adoption permitted. The Group will evaluate the impact of the adoption of ASU 2014-08 on the Group's financial position, results of operations and cash flows when any future discontinued operations or disposals are identified.

### ASC Topic 310 – Receivables

In August 2014, the FASB issued ASU 2014-14, "Classification of Certain Government-Guaranteed Mortgage Loans upon Foreclosure" (ASU 2014-14), an update to ASC Topic 310 – Receivables. ASU 2014-14 requires that a mortgage loan be derecognized and that a separate other receivable be recognized upon foreclosure if certain conditions are met and provides guidance for the measurement of the separate other receivable. ASU 2014-14 is effective for interim and annual periods beginning after December 15, 2014. The adoption of ASU 2014-14 is not expected to have a material impact on the Group's financial position, results of operations and cash flows.

### ASC Topic 606 – Revenue from Contracts with Customers

In May 2014, the FASB issued ASU 2014-09, "Revenue from Contracts with Customers" (ASU 2014-09), an update to ASC Topic 606 – Revenue from Contracts with Customers. The core principle of the guidance is that an entity should recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services. The ASU outlines key steps that an entity should follow to achieve the core principle. ASU 2014-09 is effective for annual periods beginning after December 15, 2016. The Group is currently evaluating the impact of the adoption of ASU 2014-09 on the Group's financial position, results of operations and cash flows.

### ASC Topic 718 – Compensation – Stock Compensation

In June 2014, the FASB issued ASU 2014-12, "Accounting for Share-Based Payments When the Terms of an Award Provide That a Performance Target Could Be Achieved after the Requisite Service Period" (ASU 2014-12), an update to Topic 718 – Compensation – Stock Compensation. The amendments in ASU 2014-12 require that a performance target that affects vesting and that could be achieved after the requisite service period be treated as a performance condition. ASU 2014-12 is effective for interim and annual periods beginning after December 15, 2015 with early adoption permitted. The Group is currently evaluating the impact of the adoption of ASU 2014-12 on the Group's financial position, results of operations and cash flows.

### ASC Topic 810 – Consolidation

In August 2014, the FASB issued ASU 2014-13, "Measuring the Financial Assets and the Financial Liabilities of a Consolidated Collateralized Financing Entity" (ASU 2014-13), an update to ASC Topic 810 – Consolidation. ASU 2014-13 applies to reporting entities that are required to consolidate a collateralized financing entity (CFE) under the variable interest entities guidance. These entities may elect to measure the financial assets and the financial liabilities of the CFE at fair value using either ASC Topic 820 – Fair Value Measurements or an alternative provided in ASU 2014-13. When using the measurement alternative provided in this update, the reporting entity should measure both the financial assets and the financial liabilities of the CFE, using the most observable of

(i) the fair value of the financial assets and (ii) the fair value of the financial liabilities. ASU 2014-13 is effective for interim and annual periods beginning after December 15, 2015 with early adoption permitted as of the beginning of an annual period. The Group is currently evaluating the impact of the adoption of ASU 2014-13 on the Group's financial position, results of operations and cash flows.

### ASC Topic 860 – Transfers and Servicing

In June 2014, the FASB issued ASU 2014-11, "Repurchase-to-Maturity Transactions, Repurchase Financings, and Disclosures" (ASU 2014-11), an update to ASC Topic 860 – Transfers and Servicing. ASU 2014-11 amends the accounting guidance for repurchase-to-maturity transactions and repurchase financing arrangements. As a result of these amendments repurchase-to-maturity transactions will be reported as secured borrowings. For repurchase financing arrangements, the amendments require separate accounting for a transfer of a financial asset executed contemporaneously with a repurchase agreement with the same counterparty, which will result in secured borrowing accounting for the repurchase agreement. The amendments also specify new disclosures that entities must include. ASU 2014-11 is effective for interim and annual periods beginning after December 15, 2014. The Group is currently evaluating the impact of the adoption of ASU 2014-11 on the Group's financial position, results of operations and cash flows.

## 3 Business developments

### Business developments

▸ Refer to "Note 4 – Discontinued operations" for information on business divestitures in 3Q14.

In July 2014, the Group entered into an agreement to sell Private Banking & Wealth Management's local affluent and upper affluent business in Italy to Banca Generali S.p.A. The transaction also includes approximately 60 agents of Credit Suisse (Italy) S.p.A., with over EUR 2.0 billion of assets under management. The transaction is expected to close by November 2014, subject to customary closing conditions.

In July 2014, the Group announced that with respect to the global macro products business, it decided to exit its small commodities trading business. The Group will also re-focus its foreign exchange business towards a combination of electronic trading and voice offering for larger and more complex trades and will further simplify its rates product offering to focus primarily on satisfying client liquidity needs in cash products and derivatives.

In August 2014, the Group announced the sale of Prime Fund Services (PFS), including the existing PFS team, to BNP Paribas. The transaction is expected to close in 2015, subject to customary closing conditions, including related to antitrust and regulatory clearances. Revenues, expenses and the expected pre-tax gain on the disposal from this sale are immaterial.

## 4 Discontinued operations

In August 2014, the Group completed the sale of its domestic private banking business booked in Germany (German private banking business) to Bethmann Bank AG, a subsidiary of ABN AMRO, and recognized a pre-tax gain on disposal of CHF 109 million in 3Q14. As of the end of 2Q14, the German private banking business had total assets and total liabilities of CHF 979 million and CHF 742 million, respectively, that were held-for-sale. Bethmann Bank AG and ABN AMRO are companies unrelated to the Group.

In January 2014, the Group completed the sale of its Customized Fund Investment Group (CFIG), its private equity fund of funds and co-investment business, to Grosvenor Capital Management and recognized a pre-tax gain on disposal of CHF 91 million in 1Q14 net of allocated goodwill of CHF 23 million. As of the end of 4Q13, CFIG had total assets of CHF 31 million that were held-for-sale. The Group continues to hold investments in, and have unfunded commitments to, investment funds managed by CFIG. Grosvenor Capital Management is a company unrelated to the Group.

In March 2014, the Group completed the spin-off of DLJ Merchant Banking Partners, the Group's mid-market leveraged buyout business, for no consideration to aPriori Capital Partners L.P., an independent advisory firm established and controlled by members of the business' management. The transaction was completed with no gain or loss from disposal and insignificant impact on net revenues, operating expenses and net income/(loss) from discontinued operations for 1Q14 and prior periods have not been restated. The Group retained certain carried interest rights. aPriori Capital Partners L.P. is a company unrelated to the Group.

▸ Refer to "Note 4 – Discontinued operations" in V – Consolidated financial statements – Credit Suisse Group in the Credit Suisse Annual Report 2013 for further information.

For the operations discontinued in 2013 and 2014, the revenues, expenses and gains from disposals were included in the results of the Private Banking & Wealth Management segment. The reclassification of these revenues and expenses from the segment results to discontinued operations for Group reporting was effected through the Corporate Center.

The results of operations of the businesses sold have been reflected in income/(loss) from discontinued operations in the consolidated statements of operations for the relevant periods presented. The assets and liabilities of discontinued operations for which the sale has not yet been completed are presented as assets of discontinued operations held-for-sale and liabilities of discontinued operations held-for-sale, respectively, and prior periods are not reclassified.

## 5 Segment information

### Overview

The Group is a global financial services company domiciled in Switzerland. The Group's business consists of two segments: Private Banking & Wealth Management and Investment Banking. The two segments are complemented by Shared Services, which provides support in the areas of finance, operations, human resources, legal and compliance, risk management and IT. Corporate Center includes parent company operations such as Group financing, expenses for projects sponsored by the Group and certain expenses that have not been allocated to the segments. In addition, Corporate Center includes consolidation and elimination adjustments required to eliminate intercompany revenues and expenses. For the operations discontinued, the revenues, expenses and gains from disposals were included in the results of the Private Banking & Wealth Management segment. The reclassification of these revenues and expenses from the segment results to discontinued operations for Group reporting was effected through the Corporate Center.

Beginning in 2Q14, the majority of the balance sheet usage related to a portfolio of high-quality liquid assets managed by the Treasury function and previously recorded in the Corporate Center has been allocated to the business divisions to allow for a more efficient management of their business activities from an overall Group perspective with respect to LCR and Swiss leverage requirements arising from the portfolio of assets. Prior periods have been restated for the related impact on total assets.

▸ Refer to "Note 5 – Segment information" in V – Consolidated financial statements – Credit Suisse Group in the Credit Suisse Annual Report 2013 for further information on segment information, revenue sharing and cost allocation, funding and taxes.

1 Reflects MACCS issued in July 2012 that were mandatorily convertible into shares on March 29, 2013, which shares were settled and delivered on April 8, 2013.

2 Reflects changes in the fair value of the PAF2 units which were reflected in the net results of the Group until the awards were finally settled. In 1Q14, the Group restructured the PAF2 awards as due to regulatory changes the capital relief provided by PAF2 awards was no longer available under Basel III. The PAF2 units were converted into other capital eligible compensation instruments and will no longer be settleable in Credit Suisse Group shares.

3 Reflects weighted-average shares outstanding on PAF2 units. In 1Q14, the Group restructured the PAF2 awards as due to regulatory changes the capital relief provided by PAF2 awards was no longer available under Basel III. The PAF2 units were converted into other capital eligible compensation instruments and will no longer be settleable in Credit Suisse Group shares.

4 Weighted-average potential common shares relating to instruments that were not dilutive for the respective periods (and therefore not included in the diluted earnings per share calculation above) but could potentially dilute earnings per share in the future were 8.7 million, 8.8 million, 33.7 million, 8.8 million and 12.3 million for 3Q14, 2Q14, 3Q13, 9M14 and 9M13, respectively.

5 Due to the net loss in 2Q14, 1.3 million weighted-average share options and warrants outstanding and 12.2 million weighted-average share awards outstanding were excluded from the diluted earnings per share calculation, as the effect would be antidilutive.

## 14 Trading assets and liabilities

| end of | **3Q14** | 2Q14 | 4Q13 | 3Q13 |
|---|---|---|---|---|
| **Trading assets (CHF million)** | | | | |
| Debt securities | 108,519 | 105,038 | 110,116 | 117,354 |

| **Total debt securities** | **2,309** | **2,375** | **1.67** |

## 16 Loans, allowance for loan losses and credit quality

Loans are divided in two portfolio segments, "consumer" and "corporate & institutional". Consumer loans are disaggregated into the classes of mortgages, loans collateralized by securities and consumer finance. Corporate & institutional loans are disaggregated into the classes of real estate, commercial and industrial loans, financial institutions and governments and public institutions.

The determination of the loan classes is primarily driven by the customer segmentation in the two business divisions, Private Banking & Wealth Management and Investment Banking, both of which are engaged in credit activities.

The Group assigns both counterparty and transaction ratings to its credit exposures. The counterparty rating reflects the probability of default of the counterparty. The transaction rating reflects the expected loss, considering collateral, on a given transaction if the counterparty defaults. Credit risk is assessed and monitored on the single obligor and single obligation level as well as on the credit portfolio level as represented by the classes of loans. Credit limits are used to manage counterparty credit risk.

▸ Refer to "Note 18 – Loans, allowance for loan losses and credit quality" in V – Consolidated financial statements – Credit Suisse Group in the Credit Suisse Annual Report 2013 for further information on loans, allowance for loan losses, credit quality and impaired loans.

[1] Includes drawdowns under purchased loan commitments.
[2] Includes loans previously reclassified to held-for-sale that were not sold and were reclassified back to loans held-to-maturity.
[3] All loans held at amortized cost which are sold are reclassified to loans held-for-sale on or prior to the date of the sale.

### Credit quality of loans held at amortized cost

Management monitors the credit quality of loans through its credit risk management processes, which are structured to assess, quantify, measure, monitor and manage risk on a consistent basis. This process requires careful consideration of proposed extensions of credit, the setting of specific limits, monitoring during the life of the exposure, active use of credit mitigation tools and a disciplined approach to recognizing credit impairment.

Management evaluates many factors when assessing the credit quality of loans. These factors include the volatility of default probabilities, rating changes, the magnitude of potential loss, internal risk ratings, and geographic, industry and other economic factors. For the purpose of credit quality disclosures, the Group uses detailed internal risk ratings which are aggregated to the credit quality indicators investment grade and non-investment grade.

The Group employs a set of credit ratings for the purpose of internally rating counterparties. Credit ratings are intended to reflect the risk of default of each obligor or counterparty. Ratings are assigned based on internally developed rating models and processes, which are subject to governance and internally independent validation procedures.

In 3Q14, Group credit risk management enhanced its internal credit rating methodology for lombard loans on the Swiss platform across all loan classes by considering the quality and diversification of collateral securities as a basis for determining the internal risk rating both for regulatory and financial reporting purposes. The change in the internal rating methodology for lombard loans on the Swiss platform did not have a significant impact on the Group's total investment grade and non-investment grade loans.

‣ Refer to "Credit quality of loans held at amortized cost" in V – Consolidated financial statements – Credit Suisse Group – Note 18 – Loans, allowance for loan losses and credit quality in the Credit Suisse Annual Report 2013 for further information on internal ratings and the scope of the credit quality disclosures.

[1] Includes the value of collateral up to the amount of the outstanding related loans. For mortgages, collateral values are generally values at the time of granting the loan.

### Value of collateral

In Private Banking & Wealth Management, all collateral values for loans are regularly reviewed according to our risk management policies and directives, with maximum review periods determined by market liquidity, market transparency and appraisal costs. For example, traded securities are revalued on a daily basis and property values are appraised over a period of more than one year considering the characteristics of the borrower, current developments in the relevant real estate market and the current level of credit exposure to the borrower. If the credit exposure to a borrower has changed significantly, in volatile markets or in times of increasing general market risk, collateral values may be appraised more frequently. Management judgment is applied in assessing whether markets are volatile or general market risk has increased to a degree that warrants a more frequent update of collateral values. Movements in monitored risk metrics that are statistically different compared to historical experience are considered in addition to analysis of externally-provided forecasts, scenario techniques and macro-economic research. For impaired loans, the fair value of collateral is determined within 90 days of the date the impairment was identified and thereafter regularly revalued by Group credit risk management within the impairment review process.

In Investment Banking, few loans are collateral dependent. The collateral values for these loans are appraised on at least an annual basis, or when a loan-relevant event occurs.

In 3Q14, most loan modifications of the Group included interest rate reductions to rates lower than the current market rate for new loans with similar risk, partially in combination with extended repayment terms and/or amended collateral terms. Certain restructurings included a reduction of the principal loan balance and/or accrued interest.

In 3Q14, 2Q14, 3Q13, 9M14 and 9M13, the Group did not experience a default on any loan which had been restructured within the previous 12 months.

In addition to the treasury shares, a maximum of 680,000,000 unissued shares (conditional, conversion and authorized capital) were available for issuance without further approval of the shareholders. 498,874,240 of these shares were reserved for capital instruments.
[3] At par value CHF 0.04 each, fully paid. In addition to the treasury shares, a maximum of 661,735,049 unissued shares (conditional, conversion and authorized capital) were available for issuance without further approval of the shareholders. 498,874,240 of these shares were reserved for capital instruments.

## 20 Offsetting of financial assets and financial liabilities

The disclosures set out in the tables below include derivatives, reverse repurchase and repurchase agreements, and securities lending and borrowing transactions that:

- are offset in the Group's consolidated balance sheets; or
- are subject to an enforceable master netting agreement or similar agreement (enforceable master netting agreements), irrespective of whether they are offset in the Group's consolidated balance sheets.

Similar agreements include derivative clearing agreements, global master repurchase agreements and global master securities lending agreements.

**Derivatives**

The Group transacts bilateral OTC derivatives mainly under ISDA Master Agreements and Swiss Master Agreements for OTC derivative instruments. These agreements provide for the net settlement of all transactions under the agreement through a single payment in the event of default or termination under the agreement. They allow the Group to offset balances from derivative assets and liabilities as well as the receivables and payables to related cash collateral transacted with the same counterparty. Collateral for OTC derivatives is received and provided in the form of cash and marketable securities. Such collateral may be subject to the standard industry terms of an ISDA Credit Support Annex. The terms of an ISDA Credit Support Annex provide that securities received or provided as collateral may be pledged or sold during the term of the transactions and must be returned upon maturity of the transaction. These terms also give each counterparty the right to terminate the related transactions upon the other counterparty's failure to post collateral. Financial collateral received or pledged for OTC derivatives may also be subject to collateral agreements which restrict the use of financial collateral.

For derivatives transacted with exchanges (exchange-traded derivatives) and central clearing counterparties (OTC-cleared derivatives), positive and negative replacement values (NRV) and related cash collateral may be offset if the terms of the rules and regulations governing these exchanges and central clearing counterparties permit such netting and offset.

Where no such agreements exist, fair values are recorded on a gross basis.

Under US GAAP, the Group elected to account for substantially all financial instruments with an embedded derivative that is not considered clearly and closely related to the host contract at fair value. There is an exception for certain bifurcatable hybrid debt instruments which the Group did not elect to account for at fair value. However, these bifurcated embedded derivatives are generally not subject to enforceable master netting agreements and are not recorded as derivative instruments under trading assets and liabilities or other assets and other liabilities. Information on bifurcated embedded derivatives has therefore not been included in the offsetting disclosures.

The following table presents the gross amount of derivatives subject to enforceable master netting agreements by contract and transaction type, the amount of offsetting, the amount of derivatives not subject to enforceable master netting agreements and the net amount presented in the consolidated balance sheets.

### Offsetting of derivatives

| of which recorded in other assets and other liabilities | 1.6 | 0.3 | 2.1 | 0.4 |

[1] Represents derivatives where a legal opinion supporting the enforceability of netting in the event of default or termination under the agreement is not in place.

### Reverse repurchase and repurchase agreements and securities lending and borrowing transactions

Reverse repurchase and repurchase agreements are generally covered by global master repurchase agreements with netting terms similar to ISDA Master Agreements. In certain situations, for example in the event of default, all contracts under the agreements are terminated and are settled net in one single payment. Transactions under such agreements are netted in the consolidated balance sheets if they are with the same counterparty, have the same maturity date, settle through the same clearing institution and are subject to the same master netting agreement. The amounts offset are measured on the same basis as the underlying transaction (i.e., on an accrual basis or fair value basis).

Securities lending and borrowing transactions are generally executed under global master securities lending agreements with netting terms similar to ISDA Master Agreements. In certain situations, for example in the event of default, all contracts under the agreement are terminated and are settled net in one single payment. Transactions under these agreements are netted in the consolidated balance sheets if they meet the same right of offset criteria as for reverse repurchase and repurchase agreements. In general, most securities lending and borrowing transactions do not meet the criterion of having the same settlement date specified at inception of the transaction, and therefore they are not eligible for netting in the consolidated balance sheets. However, securities lending and borrowing transactions with explicit maturity dates may be eligible for netting in the consolidated balance sheets.

Reverse repurchase and repurchase agreements are collateralized principally by government securities, money market instruments and corporate bonds and have terms ranging from overnight to a longer or unspecified period of time. In the event of counterparty default, the reverse repurchase agreement or securities lending agreement provides the Group with the right to liquidate the collateral held. As is the case in the Group's normal course of business, substantially all of the collateral received that may be sold or repledged was sold or repledged as of September 30, 2014 and December 31, 2013. In certain circumstances, financial collateral received may be restricted during the term of the agreement (e.g., in tri-party arrangements).

The following table presents the gross amount of securities purchased under resale agreements and securities borrowing transactions subject to enforceable master netting agreements, the amount of offsetting, the amount of securities purchased under resale agreements and securities borrowing transactions not subject to enforceable master netting agreements and the net amount presented in the consolidated balance sheets.

**Offsetting of securities purchased under resale agreements and securities borrowing transactions**

| | | | 3Q14 | | | 4Q13 |
|---|---|---|---|---|---|---|
| end of | Gross | Offsetting | Net | Gross | Offsetting | Net |
| **Securities purchased under resale agreements and securities borrowing transactions (CHF billion)** | | | | | | |
| Securities purchased under resale agreements | 128.8 | (30.4) | 98.4 | 112.0 | (25.1) | 86.9 |
| Securities borrowing transactions | 32.3 | (6.9) | 25.4 | 22.7 | (1.7) | 21.0 |

| **Total not subject to enforceable master netting agreements** [1] | **63.5** | **–** | **63.5** | **52.1** | **–** | **52.1** |
| **Total** | **224.6** | **(37.3)** | **187.3** [2] | **186.8** | **(26.8)** | **160.0** [2] |

[1] Represents securities purchased under resale agreements and securities borrowing transactions where a legal opinion supporting the enforceability of netting in the event of default or termination under the agreement is not in place.
[2] CHF 108,076 million and CHF 96,587 million of the total net amount as of the end of 3Q14 and 4Q13, respectively, are reported at fair value.

The following table presents the gross amount of securities sold under repurchase agreements and securities lending transactions subject to enforceable master netting agreements, the amount of offsetting, the amount of securities sold under repurchase agreements and securities lending transactions not subject to enforceable master netting agreements and the net amount presented in the consolidated balance sheets.

## Offsetting of securities sold under repurchase agreements and securities lending transactions

| | | | 3Q14 | | | 4Q13 |
|---|---|---|---|---|---|---|
| end of | Gross | Offsetting | **Net** | Gross | Offsetting | **Net** |
| **Securities sold under repurchase agreements and securities lending transactions (CHF billion)** | | | | | | |
| Securities sold under repurchase agreements | 84.3 | (34.4) | 49.9 | 86.5 | (26.8) | 59.7 |
| Securities lending transactions | 12.9 | (2.9) | 10.0 | 6.6 | 0.0 | 6.6 |
| Obligation to return securities received as collateral, at fair value | 18.9 | 0.0 | 18.9 | 18.5 | 0.0 | 18.5 |
| **Total subject to enforceable master netting agreements** | **116.1** | **(37.3)** | **78.8** | **111.6** | **(26.8)** | **84.8** |
| **Total not subject to enforceable master netting agreements** [1] | **33.3** | **–** | **33.3** | **32.0** | **–** | **32.0** |
| **Total** | **149.4** | **(37.3)** | **112.1** | **143.6** | **(26.8)** | **116.8** |
| of which securities sold under repurchase agreements and securities lending transactions | 127.2 | (37.3) | 89.9 [2] | 120.8 | (26.8) | 94.0 [2] |
| of which obligation to return securities received as collateral, at fair value | 22.2 | 0.0 | 22.2 | 22.8 | 0.0 | 22.8 |

[1] Represents securities sold under repurchase agreements and securities lending transactions where a legal opinion supporting the enforceability of netting in the event of default or termination under the agreement is not in place.
[2] CHF 64,269 million and CHF 76,104 million of the total net amount as of the end of 3Q14 and 4Q13, respectively, are reported at fair value.

The following table presents the net amount presented in the consolidated balance sheets of financial assets and liabilities subject to enforceable master netting agreements and the gross amount of financial instruments and cash collateral not offset in the consolidated balance sheets. The table excludes derivatives, reverse repurchase and repurchase agreements and securities lending and borrowing transactions not subject to enforceable master netting agreements where a legal opinion supporting the enforceability of netting in the event of default or termination under the agreement is not in place. Net exposure reflects risk mitigation in the form of collateral.

## Amounts not offset in the consolidated balance sheets

| | | | | 3Q14 | | | | 4Q13 |
|---|---|---|---|---|---|---|---|---|
| end of | Net | Financial instruments [1] | Cash collateral received/ pledged [1] | **Net exposure** | Net | Financial instruments [1] | Cash collateral received/ pledged [1] | **Net exposure** |
| **Financial assets subject to enforceable master netting agreements (CHF billion)** | | | | | | | | |
| Derivatives | 28.5 | 5.8 | 0.1 | 22.6 | 23.6 | 4.9 | 0.1 | 18.6 |
| Securities purchased under resale agreements | 98.4 | 98.4 | 0.0 | 0.0 | 86.9 | 86.9 | 0.0 | 0.0 |
| Securities borrowing transactions | 25.4 | 24.8 | 0.0 | 0.6 | 21.0 | 20.2 | 0.0 | 0.8 |
| **Total financial assets subject to enforceable master netting agreements** | **152.3** | **129.0** | **0.1** | **23.2** | **131.5** | **112.0** | **0.1** | **19.4** |
| **Financial liabilities subject to enforceable master netting agreements (CHF billion)** | | | | | | | | |
| Derivatives | 27.0 | 12.0 | 0.0 | 15.0 | 25.6 | 9.9 | 0.0 | 15.7 |
| Securities sold under repurchase agreements | 49.9 | 49.7 | 0.0 | 0.2 | 59.7 | 59.7 | 0.0 | 0.0 |
| Securities lending transactions | 10.0 | 9.5 | 0.0 | 0.5 | 6.6 | 6.2 | 0.0 | 0.4 |
| Obligation to return securities received as collateral, at fair value | 18.9 | 17.9 | 0.0 | 1.0 | 18.5 | 17.5 | 0.0 | 1.0 |
| **Total financial liabilities subject to enforceable master netting agreements** | **105.8** | **89.1** | **0.0** | **16.7** | **110.4** | **93.3** | **0.0** | **17.1** |

[1] The total amount reported in financial instruments (recognized financial assets and financial liabilities and non-cash financial collateral) and cash collateral is limited to the amount of the related instruments presented in the consolidated balance sheets and therefore any over-collateralization of these positions is not included.

Net exposure is subject to further credit mitigation through the transfer of the exposure to other market counterparties by the use of CDS and credit insurance contracts. Therefore the net exposure presented in the table above is not representative for the Group's counterparty exposure.

## 21 Tax

The income tax expense of CHF 366 million recorded in 3Q14 mainly reflected the impact of the geographical mix of results.

The presentation of income tax expense and deferred tax assets and liabilities is in accordance with ASC Topic 740 – Income Taxes – guidance to interim reporting.

The quarterly income tax expense includes the impact of the continuous re-assessment of the estimated annual effective tax rate as well as the impact of items that need to be recorded in the specific interim period in which they occur.

Net deferred tax assets related to net operating losses, net deferred tax assets on temporary differences and net deferred tax liabilities are presented in the following manner. Nettable gross deferred tax liabilities are allocated on a pro-rata basis to gross deferred tax assets on net operating losses and gross deferred tax assets on temporary differences. This approach is aligned with the underlying treatment of netting gross deferred tax assets and liabilities under the Basel III framework. Valuation allowances have been allocated against such deferred tax assets on net operating losses first with any remainder allocated to such deferred tax assets on temporary differences. This presentation is considered the most appropriate disclosure given the underlying nature of the gross deferred tax balances.

As of September 30, 2014, the Group had accumulated undistributed earnings from foreign subsidiaries of CHF 6.6 billion which are considered indefinitely reinvested. The Group would need to accrue and pay taxes on these undistributed earnings if such earnings were repatriated. No deferred tax liability was recorded in respect of those amounts as these earnings are considered indefinitely reinvested. It is not practicable to estimate the amount of unrecognized deferred tax liabilities for these undistributed foreign earnings.

The Group is currently subject to ongoing tax audits, inquiries and litigation with the tax authorities in a number of jurisdictions, including Brazil, the Netherlands, the US, the UK and Switzerland. Although the timing of completion is uncertain, it is reasonably possible that some of these will be resolved within 12 months of the reporting date. It is reasonably possible that there will be a decrease between zero and CHF 78 million in unrecognized tax benefits within 12 months of the reporting date.

The Group remains open to examination from federal, state, provincial or similar local jurisdictions from the following years onward in these major countries: Switzerland – 2010; Brazil – 2009; Japan – 2009; the UK – 2006; the US – 2006; and the Netherlands – 2005.

### Effective tax rate

| in | **3Q14** | 2Q14 | 3Q13 | **9M14** | 9M13 |
|---|---|---|---|---|---|
| **Effective tax rate (%)** | **27.4** | (88.7) | 40.4 | **44.5** | 30.2 |

### Tax expense reconciliation

| in | **3Q14** |
|---|---|
| **CHF million** | |
| **Income tax expense/(benefit) computed at the Swiss statutory tax rate of 22%** | **294** |
| Increase/(decrease) in income taxes resulting from | |
| Foreign tax rate differential | (27) |
| Other non-deductible expenses | 87 |
| Changes in deferred tax valuation allowance | 43 |
| Lower taxed income | (82) |
| Income taxable to noncontrolling interests | (15) |
| Change in recognition of outside basis difference | 243 |
| Tax deductible impairments of Swiss subsidiary investments | (174) |
| Other | (3) |
| **Income tax expense** | **366** |

#### Foreign tax rate differential

3Q14 included a foreign tax benefit of CHF 27 million in respect of earnings in higher tax jurisdictions, such as the US, as well as earnings in lower tax jurisdictions, such as Singapore.

#### Other non-deductible expenses

3Q14 included the impact of non-deductible interest expenses of CHF 52 million, non-deductible bank levy costs and other non-deductible expenses of CHF 35 million.

#### Changes in deferred tax valuation allowance

3Q14 included the impact of the increase of valuation allowances of CHF 44 million mainly in respect of four of the Group's operating entities, three in Europe and one in Asia, related to estimated current year earnings.

#### Lower taxed income

3Q14 included the impact of a beneficial earnings mix in one of the Group's operating entities in Switzerland of CHF 44 million, a CHF 21 million income tax benefit related to non-taxable life insurance income and various other smaller items totaling CHF 17 million.

#### Change in recognition of outside basis difference

3Q14 included a CHF 243 million income tax charge related to a partial reversal of the outside basis differences relating to Swiss subsidiary investments.

### Net deferred tax assets

| end of | 3Q14 | 2Q14 |
|---|---|---|
| **Net deferred tax assets (CHF million)** | | |
| Deferred tax assets | 5,833 | 5,557 |
| of which net operating losses | 990 | 758 |
| of which deductible temporary differences | 4,843 | 4,799 |
| Deferred tax liabilities | (441) | (423) |
| **Net deferred tax assets** | **5,392** | **5,134** |

## 22 Employee deferred compensation

The Group's current and previous deferred compensation plans include share awards, performance share awards, Contingent Capital Awards, Capital Opportunity Facility awards, Plus Bond awards, Partner Asset Facilities awards, Adjustable Performance Plan awards, Restricted Cash Awards, Scaled Incentive Share Units (SISUs), Incentive Share Units (ISUs) and other cash awards.

▸ Refer to "Note 28 – Employee deferred compensation" in V – Consolidated financial statements – Credit Suisse Group in the Credit Suisse Annual Report 2013 for further information.

The following tables show the expense for deferred compensation awards recognized in the consolidated statements of operations, the estimated unrecognized expense for deferred compensation awards granted in 3Q14 and prior periods and the associated remaining requisite service period over which the unrecognized expense will be recognized. The estimated unrecognized deferred compensation expense was based on the fair value of each award on the date of grant and included the current estimated outcome of relevant performance criteria and estimated future forfeitures but no estimate for future mark-to-market adjustments.

### Deferred compensation expense

| in | 3Q14 | 2Q14 | 3Q13 | 9M14 | 9M13 |
|---|---|---|---|---|---|
| **Deferred compensation expense (CHF million)** | | | | | |
| Share awards | 232 | 227 | 183 | 709 | 640 |
| Performance share awards | 145 | 156 | 138 | 473 | 468 |
| Contingent Capital Awards | 17 | 79 | – | 192 | – |

| **Total deferred compensation expense** | **529** | **632** | **541** | **1,870** | **1,731** |

[1] Compensation expense primarily relates to mark-to-market changes of the underlying assets of the Plus Bonds and the amortization of the voluntary Plus Bonds elected in 1Q13 and expensed over a three-year vesting period.
[2] Compensation expense mainly includes the change in underlying fair value of the indexed assets during the period.
[3] Includes forfeitures and downward adjustments according to the plan terms and conditions.
[4] Includes forfeitures.

## 24 Derivatives and hedging activities

▸ Refer to "Note 31 – Derivatives and hedging activities" in V – Consolidated financial statements – Credit Suisse Group in the Credit Suisse Annual Report 2013 for further information.

### Fair value of derivative instruments

The tables below present gross derivative replacement values by type of contract and balance sheet location and whether the derivative is used for trading purposes or in a qualifying hedging relationship. Notional amounts have also been provided as an indication of the volume of derivative activity within the Group.

Information on bifurcated embedded derivatives has not been included in these tables. Under US GAAP, the Group elected to account for substantially all financial instruments with an embedded derivative that is not considered clearly and closely related to the host contract at fair value.

▸ Refer to "Note 27 – Financial instruments" for further information.

### Fair value of derivative instruments

| | | | Trading | | | Hedging [1] |
|---|---|---|---|---|---|---|
| end of 3Q14 | Notional amount | Positive replacement value (PRV) | Negative replacement value (NRV) | Notional amount | Positive replacement value (PRV) | Negative replacement value (NRV) |

[1] Included in trading revenues.
[2] Included in other revenues.

As of the end of 3Q14, the maximum length of time over which the Group hedged its exposure to the variability in future cash flows for forecasted transactions, excluding those forecasted transactions related to the payment of variable interest on existing financial instruments, was five years.

The net gain associated with cash flow hedges expected to be reclassified from AOCI within the next 12 months is CHF 4 million.

## Net investment hedges

| in | 3Q14 | 2Q14 | 3Q13 | 9M14 | 9M13 |
|---|---|---|---|---|---|

| Foreign exchange products [1] | 0 | 0 | 2 | 0 | 2 |
| **Total** | **0** | **0** | **2** | **0** | **2** |

Represents gains/(losses) on effective portion.
[1] Included in other revenues.

The Group includes all derivative instruments not included in hedge accounting relationships in its trading activities.

▸ Refer to "Note 8 – Trading revenues" for gains and losses on trading activities by product type.

### Disclosures relating to contingent credit risk

Certain of the Group's derivative instruments contain provisions that require it to maintain a specified credit rating from each of the major credit rating agencies. If the ratings fall below the level specified in the contract, the counterparties to the agreements could request payment of additional collateral on those derivative instruments that are in a net liability position. Certain of the derivative contracts also provide for termination of the contract, generally upon a downgrade of either the Group or the counterparty, at the existing mark-to-market replacement value of the derivative contract.

The following table provides the Group's current net exposure from contingent credit risk relating to derivative contracts with bilateral counterparties and SPEs that include credit support agreements, the related collateral posted and the additional collateral required in a one-notch and a two-notch downgrade event, respectively. The table also includes derivative contracts with contingent credit risk features without credit support agreements that have accelerated termination event conditions. The current net exposure for derivative contracts with bilateral counterparties and contracts with accelerated termination event conditions is the aggregate fair value of derivative instruments that were in a net liability position. For SPEs, the current net exposure is the contractual amount that is used to determine the collateral payable in the event of a downgrade. The contractual amount could include both the NRV and a percentage of the notional value of the derivative.

### Contingent credit risk

| Additional collateral required in a two-notch downgrade event | 2.1 | 0.8 | 0.1 | **3.0** | 2.3 | 1.1 | 0.0 | **3.4** |

### Credit derivatives

▸ Refer to "Note 31 – Derivatives and hedging activities" in V – Consolidated financial statements – Credit Suisse Group in the Credit Suisse Annual Report 2013 for further information on credit derivatives.

#### Credit protection sold/purchased

The following tables do not include all credit derivatives and differ from the credit derivatives in the "Fair value of derivative instruments" tables. This is due to the exclusion of certain credit derivative instruments under US GAAP, which defines a credit derivative as a derivative instrument (a) in which one or more of its underlyings are related to the credit risk of a specified entity (or a group of entities) or an index based on the credit risk of a group of entities and (b) that exposes the seller to potential loss from credit risk-related events specified in the contract.

Certain cash collateralized debt obligations (CDOs) and other derivative instruments were excluded as they do not fall within the scope of US GAAP rules. TRS of CHF 12.2 billion and CHF 7.4 billion as of the end of 3Q14 and 4Q13, respectively, were also excluded because a TRS does not expose the seller to potential loss from credit risk-related events specified in the contract. A TRS only provides protection against a loss in asset value and not against additional amounts as a result of specific credit events.

#### Credit protection sold

Credit protection sold is the maximum potential payout, which is based on the notional value of derivatives and represents the amount of future payments that the Group would be required to make as a result of credit risk-related events.

#### Credit protection purchased

Credit protection purchased represents those instruments where the underlying reference instrument is identical to the reference instrument of the credit protection sold.

#### Other protection purchased

In the normal course of business, the Group purchases protection to offset the risk of credit protection sold that may have similar, but not identical, reference instruments and may use similar, but not identical, products, which reduces the total credit derivative exposure. Other protection purchased is based on the notional value of the instruments.

#### Fair value of credit protection sold

The fair values of the credit protection sold give an indication of the amount of payment risk, as the negative fair values increase when the potential payment under the derivative contracts becomes more probable.

| **Total instruments** | **(645.1)** | **617.9** | **(27.2)** | **103.3** | **10.8** | **(698.7)** | **663.9** | **(34.8)** | **109.0** | **12.5** |
| of which sovereign | (89.5) | 86.3 | (3.2) | 10.3 | (0.1) | (98.9) | 95.9 | (3.0) | 10.0 | (0.4) |
| of which non-sovereign | (555.6) | 531.6 | (24.0) | 93.0 | 10.9 | (599.8) | 568.0 | (31.8) | 99.0 | 12.9 |

1 Represents credit protection purchased with identical underlyings and recoveries.
2 Based on internal ratings of BBB and above.
3 Includes the Clock Finance transaction.

The following table reconciles the notional amount of credit derivatives included in the table "Fair value of derivative instruments" to the table "Credit protection sold/purchased".

## Credit derivatives

| end of | **3Q14** | 4Q13 |
|---|---|---|
| **Credit derivatives (CHF billion)** | | |
| Credit protection sold | 645.1 | 698.7 |
| Credit protection purchased | 617.9 | 663.9 |
| Other protection purchased | 103.3 | 109.0 |
| Other instruments [1] | 23.5 | 11.7 |
| **Total credit derivatives** | **1,389.8** | **1,483.3** |

1 Consists of certain cash collateralized debt obligations, total return swaps and other derivative instruments.

The segregation of the future payments by maturity range and underlying risk gives an indication of the current status of the potential for performance under the derivative contracts.

## Maturity of credit protection sold

| end of | Maturity less than 1 year | Maturity between 1 to 5 years | Maturity greater than 5 years | **Total** |
|---|---|---|---|---|
| **3Q14 (CHF billion)** | | | | |
| Single-name instruments | 79.4 | 268.6 | 37.2 | 385.2 |
| Multi-name instruments | 29.5 | 210.1 | 20.3 | 259.9 |
| **Total instruments** | **108.9** | **478.7** | **57.5** | **645.1** |
| **4Q13 (CHF billion)** | | | | |
| Single-name instruments | 91.2 | 281.4 | 42.0 | 414.6 |
| Multi-name instruments | 19.2 | 208.2 | 56.7 | 284.1 |
| **Total instruments** | **110.4** | **489.6** | **98.7** | **698.7** |

## 25 Guarantees and commitments

### Guarantees

In the ordinary course of business, guarantees are provided that contingently obligate Credit Suisse to make payments to third parties if the counterparty fails to fulfill its obligation under a borrowing or other contractual arrangement. The total gross amount disclosed within the Guarantees table reflects the maximum potential payment under the guarantees. The carrying value represents the higher of the initial fair value (generally the related fee received or receivable) less cumulative amortization and the Group's current best estimate of payments that will be required under existing guarantee arrangements.

Guarantees provided by the Group are classified as follows: credit guarantees and similar instruments, performance guarantees and similar instruments, securities lending indemnifications, derivatives and other guarantees.

▸ Refer to "Guarantees" in V – Consolidated financial statements – Credit Suisse Group – Note 32 – Guarantees and commitments in the Credit Suisse Annual Report 2013 for a detailed description of guarantees.

### Guarantees

| end of | Maturity less than 1 year | Maturity greater than 1 year | **Total gross amount** | Total net amount [1] | Carrying value | Collateral received |
|---|---|---|---|---|---|---|
| **3Q14 (CHF million)** | | | | | | |
| Credit guarantees and similar instruments | 2,862 | 1,593 | 4,455 | 4,218 | 15 | 2,165 |
| Performance guarantees and similar instruments | 4,923 | 2,730 | 7,653 | 6,766 | 61 | 3,132 |
| Securities lending indemnifications | 12,729 | 0 | 12,729 | 12,729 | 0 | 12,729 |
| Derivatives [2] | 28,130 | 9,681 | 37,811 | 37,811 | 884 | – [3] |
| Other guarantees | 3,553 | 1,239 | 4,792 | 4,783 | 37 | 2,545 |
| **Total guarantees** | **52,197** | **15,243** | **67,440** | **66,307** | **997** | **20,571** |
| **4Q13 (CHF million)** | | | | | | |
| Credit guarantees and similar instruments | 2,688 | 1,526 | 4,214 | 4,066 | 14 | 2,333 |
| Performance guarantees and similar instruments | 4,910 | 3,136 | 8,046 | 7,125 | 107 | 3,312 |
| Securities lending indemnifications | 11,479 | 0 | 11,479 | 11,479 | 0 | 11,479 |
| Derivatives [2] | 18,247 | 13,403 | 31,650 | 31,650 | 715 | – [3] |
| Other guarantees | 4,003 | 1,212 | 5,215 | 5,191 | 3 | 2,631 |
| **Total guarantees** | **41,327** | **19,277** | **60,604** | **59,511** | **839** | **19,755** |

[1] Total net amount is computed as the gross amount less any participations.
[2] Excludes derivative contracts with certain active commercial and investment banks and certain other counterparties, as such contracts can be cash settled and the Group had no basis to conclude it was probable that the counterparties held, at inception, the underlying instruments.
[3] Collateral for derivatives accounted for as guarantees is not significant.

Deposit-taking banks and securities dealers in Switzerland and certain other European countries are required to ensure the payout of privileged deposits in case of specified restrictions or compulsory liquidation of a deposit-taking bank. In Switzerland, deposit-taking banks and securities dealers jointly guarantee an amount of up to CHF 6 billion. Upon occurrence of a payout event triggered by a specified restriction of business imposed by FINMA or by the compulsory liquidation of another deposit-taking bank, the Group's contribution will be calculated based on its share of privileged deposits in proportion to total privileged deposits. Based on FINMA's estimate for the Group's banking subsidiaries in Switzerland, the Group's share in the deposit insurance guarantee program for the period July 1, 2014 to June 30, 2015 is CHF 0.6 billion. These deposit insurance guarantees were reflected in other guarantees.

### Representations and warranties on residential mortgage loans sold

In connection with Investment Banking's sale of US residential mortgage loans, the Group has provided certain representations and warranties relating to the loans sold. The Group has provided these representations and warranties relating to sales of loans to: the US government-sponsored enterprises (GSEs) Fannie Mae and Freddie Mac; institutional investors, primarily banks; and non-agency, or private label, securitizations. The loans sold are primarily loans that the Group has purchased from other parties. The scope of representations and warranties, if any, depends on the transaction, but can include: ownership of the mortgage loans and legal capacity to sell the loans; loan-to-value ratios and other characteristics of the property, the borrower and the loan; validity of the liens securing the loans and absence of delinquent taxes or related liens; conformity to underwriting standards and completeness of documentation; and origination in compliance with law. If it is determined that representations and warranties were breached, the Group may be required to repurchase the related loans or indemnify the investors to make them whole for losses. Whether the Group will incur a loss in connection with repurchases and make whole payments depends on: the extent to which claims are made; the validity of such claims (including the likelihood and ability to enforce claims); whether the Group can successfully claim against parties that sold loans to the Group and made representations and warranties to the Group; the residential real estate market, including the number of defaults; and whether the obligations of the securitization vehicles were guaranteed or insured by third parties.

With respect to its outstanding repurchase claims, the Group is unable to estimate reasonably possible losses in excess of the amounts accrued because of the heterogeneity of its portfolio, the complexity of legal and factual determinations related to each claim, the limited amount of discovery and/or other factors.

The following tables present the total amount of residential mortgage loans sold during the period from January 1, 2004 to September 30, 2014 by counterparty type and the development of outstanding repurchase claims and provisions for outstanding repurchase claims in 3Q14, 2Q14 and 3Q13, including realized losses from the repurchase of residential mortgage loans sold.

### Residential mortgage loans sold

| January 1, 2004 to September 30, 2014 (USD billion) | |
|---|---|
| Government-sponsored enterprises | 8.2 |
| Private investors [1] | 24.8 |
| Non-agency securitizations | 136.1 [2] |
| **Total residential mortgage loans sold** | **169.1** |

[1] Primarily banks.
[2] Of the total residential mortgage loans sold to non-agency securitizations USD 26.1 billion were outstanding as of the end of 3Q14. The difference of the total balance of mortgage loans sold and the outstanding balance as of the end of 3Q14 is attributable to borrower payments of USD 90.7 billion and losses of USD 19.3 billion due to loan defaults.

### Residential mortgage loans sold – outstanding repurchase claims

| **Balance at beginning of period** | **77** | **420** | **83** | **580** | **67** | **464** | **1,395** | **1,926** |
| New claims | 10 | 1 | 374 | 385 | 48 | 137 | 498 | 683 |
| Claims settled through repurchases | 0 | 0 | 0 | 0 | (4) | 0 | (2) | (6) [1] |
| Other settlements | (4) | (416) | (5) | (425) [2] | (26) | (178) | (7) | (211) [2] |
| Total claims settled | (4) | (416) | (5) | (425) | (30) | (178) | (9) | (217) |
| Claims rescinded | (16) | 0 | 0 | (16) | (19) | (4) | 0 | (23) |
| Transfers to/from arbitration and litigation, net [3] | 0 | (2) | (369) | (371) | 0 | 0 | (1,812) | (1,812) |
| **Balance at end of period** | **67** | **3** | **83** | **153** | **66** | **419** | **72** | **557** |

1 Settled at a repurchase price of USD 6 million.
2 Settled at USD 66 million and USD 45 million in 9M14 and 9M13, respectively.
3 Refer to "Note 29 – Litigation" for repurchase claims that are in arbitration or litigation.

### Provisions for outstanding repurchase claims

| | 3Q14 | 2Q14 | 3Q13 | 9M14 | 9M13 |
|---|---|---|---|---|---|
| **Provisions for outstanding repurchase claims (USD million)** [1] | | | | | |
| **Balance at beginning of period** | **60** | **136** | **98** | **146** | **55** |
| Increase/(decrease) in provisions, net | 0 | (17) | 10 | (20) | 84 |
| Realized losses [2] | 0 | (59) [3] | (20) [4] | (66) [3] | (51) [4] |
| **Balance at end of period** [5] | **60** | **60** | **88** | **60** | **88** |

1 Excludes provisions for repurchase claims related to residential mortgage loans sold that are in arbitration or litigation. Refer to "Note 29 – Litigation" for further information.
2 Includes indemnifications paid to resolve loan repurchase claims.
3 Primarily related to private investors.
4 Primarily related to government-sponsored enterprises and private investors.
5 Primarily related to government-sponsored enterprises.

Representations and warranties relating to residential mortgage loans sold to non-agency securitization vehicles are more limited in scope than those relating to residential mortgage loans sold to GSEs, and it can be more difficult to establish causation and standing in making a repurchase claim for breach of representations and warranties on residential mortgage loans sold in non-agency securitizations. The Group is involved in litigation relating to representations and warranties on residential mortgage loans sold.

▸ Refer to "Note 29 – Litigation" for further information.

Repurchase claims on residential mortgage loans sold that are subject to arbitration or litigation proceedings, or become so during the reporting period, are not included in the Guarantees and commitments disclosure of repurchase claims and related loss contingencies and provisions but are addressed in litigation and related loss contingencies and provisions.

Repurchase claims relating to residential mortgage loans sold may increase in the future based on the large number of defaults in residential mortgages, including those sold or securitized by the Group.

#### Disposal-related contingencies and other indemnifications

The Group has certain guarantees for which its maximum contingent liability cannot be quantified. These guarantees include disposal-related contingencies in connection with the sale of assets or businesses, and other indemnifications. These guarantees are not reflected in the "Guarantees" table.

▸ Refer to "Disposal-related contingencies and other indemnifications" in V – Consolidated financial statements – Credit Suisse Group – Note 32 – Guarantees and commitments in the Credit Suisse Annual Report 2013 for a description of these guarantees.

### Other commitments

Other commitments of the Group are classified as follows: irrevocable commitments under documentary credits, irrevocable loan commitments, forward reverse repurchase agreements and other commitments.

‣ Refer to "Other commitments" in V – Consolidated financial statements – Credit Suisse Group – Note 32 – Guarantees and commitments in the Credit Suisse Annual Report 2013 for a description of these commitments.

### Other commitments

| | 3Q14 | | | | | 4Q13 | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| end of | Maturity less than 1 year | Maturity greater than 1 year | **Total gross amount** | Total net amount [1] | Collateral received | Maturity less than 1 year | Maturity greater than 1 year | **Total gross amount** | Total net amount [1] | Collateral received |
| **Other commitments (CHF million)** | | | | | | | | | | |
| Irrevocable commitments under documentary credits | 5,342 | 30 | 5,372 | 5,180 | 3,357 | 5,484 | 28 | 5,512 | 5,452 | 3,381 |
| Irrevocable loan commitments [2] | 34,096 | 84,957 | 119,053 | 115,312 | 57,719 | 27,250 | 69,740 | 96,990 | 92,732 | 47,996 |
| Forward reverse repurchase agreements | 32,350 | 0 | 32,350 | 32,350 | 32,350 | 26,893 | 0 | 26,893 | 26,893 | 26,893 |

| **Total other commitments** | **72,688** | **86,166** | **158,854** | **154,921** | **93,426** | **62,108** | **71,178** | **133,286** | **128,968** | **78,620** |

1 Total net amount is computed as the gross amount less any participations.
2 Irrevocable loan commitments do not include a total gross amount of CHF 102,069 million and CHF 90,254 million of unused credit limits as of the end of 3Q14 and 4Q13, respectively, which were revocable at the Group's sole discretion upon notice to the client.

## 26 Transfers of financial assets and variable interest entities

In the normal course of business, the Group enters into transactions with, and makes use of, SPEs. An SPE is an entity in the form of a trust or other legal structure designed to fulfill a specific limited need of the company that organized it and is generally structured to isolate the SPE's assets from creditors of other entities, including the Group. The principal uses of SPEs are to assist the Group and its clients in securitizing financial assets and creating investment products. The Group also uses SPEs for other client-driven activity, such as to facilitate financings, and Group tax or regulatory purposes.

### TRANSFERS OF FINANCIAL ASSETS

#### Securitizations

The majority of the Group's securitization activities involve mortgages and mortgage-related securities and are predominantly transacted using SPEs. In a typical securitization, the SPE purchases assets financed by proceeds received from the SPE's issuance of debt and equity instruments, certificates, commercial paper (CP) and other notes of indebtedness. These assets and liabilities are recorded on the balance sheet of the SPE and not reflected on the Group's consolidated balance sheet, unless either the Group sold the assets to the entity and the accounting requirements for sale were not met or the Group consolidates the SPE.

The Group purchases commercial and residential mortgages for the purpose of securitization and sells these mortgage loans to SPEs. These SPEs issue CMBS, RMBS and ABS that are collateralized by the assets transferred to the SPE and that pay a return based on the returns on those assets. Investors in these mortgage-backed securities or ABS typically have recourse to the assets in the SPEs, unless a third-party guarantee has been received to further enhance the creditworthiness of the assets. The investors and the SPEs have no recourse to the Group's assets. The Group is typically an underwriter of, and makes a market in, these securities.

The Group also transacts in re-securitizations of previously issued RMBS securities. Typically, certificates issued out of an existing securitization vehicle are sold into a newly created and separate securitization vehicle. Often, these re-securitizations are initiated in order to repackage an existing security to give the investor a higher rated tranche.

The Group also uses SPEs for other asset-backed financings relating to client-driven activity and for Group tax or regulatory purposes. Types of structures included in this category include CDOs, leveraged finance, repack and other types of transactions, including life insurance structures, emerging market structures set up for financing, loan participation or loan origination purposes, and other alternative structures created for the purpose of investing in venture capital-like investments. CDOs are collateralized by the assets transferred to the CDO vehicle and pay a return based on the returns on those assets. Leveraged finance structures are used to assist in the syndication of certain loans held by the Group, while repack structures are designed to give a client collateralized exposure to specific cash flows or credit risk backed by collateral purchased from the Group. In these asset-backed financing structures investors typically only have recourse to the collateral of the SPE and do not have recourse to the Group's assets.

When the Group transfers assets into an SPE, it must assess whether that transfer is accounted for as a sale of the assets. Transfers of assets may not meet sale requirements if the assets have not been legally isolated from the Group and/or if the Group's continuing involvement is deemed to give it effective control over the assets. If the transfer is not deemed a sale, it is instead accounted for as a secured borrowing, with the transferred assets as collateral.

Gains and losses on securitization transactions depend, in part, on the carrying values of mortgages and CDOs involved in the transfer and are allocated between the assets sold and any beneficial interests retained according to the relative fair values at the date of sale.

The Group does not retain material servicing responsibilities from securitization activities.

The following table provides the gains or losses and proceeds from the transfer of assets relating to 9M14 and 9M13 securitizations of financial assets that qualify for sale accounting and subsequent derecognition, along with the cash flows between the Group and the SPEs used in any securitizations in which the Group still has continuing involvement, regardless of when the securitization occurred.

### Securitizations

| in | 9M14 | 9M13 |
|---|---|---|
| **Gains and cash flows (CHF million)** | | |
| **CMBS** | | |
| Net gain [1] | 8 | 1 |
| Proceeds from transfer of assets | 3,007 | 4,204 |
| Cash received on interests that continue to be held | 74 | 50 |
| **RMBS** | | |
| Net gain/(loss) [1] | 13 | (7) |
| Proceeds from transfer of assets | 20,113 | 20,200 |
| Purchases of previously transferred financial assets or its underlying collateral | (4) | (8) |
| Servicing fees | 1 | 3 |
| Cash received on interests that continue to be held | 303 | 400 |
| **Other asset-backed financings** | | |
| Net gain [1] | 20 | 12 |
| Proceeds from transfer of assets | 1,249 | 740 |
| Purchases of previously transferred financial assets or its underlying collateral [2] | 0 | (213) |
| Cash received on interests that continue to be held | 5 | 605 |

[1] Includes underwriting revenues, deferred origination fees, gains or losses on the sale of collateral to the SPE and gains or losses on the sale of newly issued securities to third parties, but excludes net interest income on assets prior to the securitization. The gains or losses on the sale of the collateral is the difference between the fair value on the day prior to the securitization pricing date and the sale price of the loans.

[2] Represents market making activity and voluntary repurchases at fair value where no repurchase obligations were present.

### Continuing involvement in transferred financial assets

The Group may have continuing involvement in the financial assets that are transferred to an SPE which may take several forms, including, but not limited to, servicing, recourse and guarantee arrangements, agreements to purchase or redeem transferred assets, derivative instruments, pledges of collateral and beneficial interests in the transferred assets.

▸ Refer to "Transfer of financial assets" in V – Consolidated financial statements – Credit Suisse Group – Note 33 – Transfer of financial assets and variable interest entities in the Credit Suisse Annual Report 2013 for a detailed description of continuing involvement in transferred financial assets.

The following table provides the outstanding principal balance of assets to which the Group continued to be exposed after the transfer of the financial assets to any SPE and the total assets of the SPE as of the end of 3Q14 and 4Q13, regardless of when the transfer of assets occurred.

### Principal amounts outstanding and total assets of SPEs resulting from continuing involvement

| end of | 3Q14 | 4Q13 |
|---|---|---|
| **CHF million** | | |
| **CMBS** | | |
| Principal amount outstanding | 38,395 | 37,308 |
| Total assets of SPE | 42,882 | 48,715 |
| **RMBS** | | |
| Principal amount outstanding | 53,296 | 45,571 |
| Total assets of SPE | 53,436 | 48,741 |
| **Other asset-backed financings** | | |
| Principal amount outstanding | 26,160 | 27,854 |
| Total assets of SPE | 26,160 | 27,854 |

Principal amount outstanding relates to assets transferred from the Group and does not include principal amounts for assets transferred from third parties.

### Fair value of beneficial interests

The fair value measurement of the beneficial interests held at the time of transfer and as of the reporting date that result from any continuing involvement is determined using fair value estimation techniques, such as the present value of estimated future cash flows that incorporate assumptions that market participants customarily use in these valuation techniques. The fair value of the assets or liabilities that result from any continuing involvement does not include any benefits from financial instruments that the Group may utilize to hedge the inherent risks.

## Key economic assumptions at the time of transfer

▸ Refer to "Note 27 – Financial instruments" for information on fair value hierarchy levels.

### Key economic assumptions used in measuring fair value of beneficial interests at time of transfer

| | | 9M14 | | 9M13 |
|---|---|---|---|---|
| at time of transfer, in | CMBS | RMBS | CMBS | RMBS |
| **CHF million, except where indicated** | | | | |
| Fair value of beneficial interests | 1,493 | 3,374 | 337 | 2,482 |
| of which level 2 | 1,423 | 3,183 | 252 | 2,389 |
| of which level 3 | 70 | 191 | 85 | 93 |
| Weighted-average life, in years | 3.9 | 8.3 | 7.2 | 7.7 |
| Prepayment speed assumption (rate per annum), in % [1] | – [2] | 1.5–23.0 | – [2] | 5.4–31.0 |
| Cash flow discount rate (rate per annum), in % [3] | 1.0–11.0 | 2.0–17.8 | 1.6–11.6 | 0.0–45.9 |
| Expected credit losses (rate per annum), in % | 1.0–2.0 | 2.0–15.3 | 0.0–7.5 | 0.0–45.8 |

Transfers of assets in which the Group does not have beneficial interests are not included in this table.

[1] Prepayment speed assumption (PSA) is an industry standard prepayment speed metric used for projecting prepayments over the life of a residential mortgage loan. PSA utilizes the constant prepayment rate (CPR) assumptions. A 100% prepayment assumption assumes a prepayment rate of 0.2% per annum of the outstanding principal balance of mortgage loans in the first month. This increases by 0.2% thereafter during the term of the mortgage loan, leveling off to a CPR of 6% per annum beginning in the 30th month and each month thereafter during the term of the mortgage loan. 100 PSA equals 6 CPR.

[2] To deter prepayment, commercial mortgage loans typically have prepayment protection in the form of prepayment lockouts and yield maintenances.

[3] The rate was based on the weighted-average yield on the beneficial interests.

## Key economic assumptions as of the reporting date

The following table provides the sensitivity analysis of key economic assumptions used in measuring the fair value of beneficial interests held in SPEs as of the end of 3Q14 and 4Q13.

### Key economic assumptions used in measuring fair value of beneficial interests held in SPEs

| | | | 3Q14 | | | 4Q13 |

[1] To deter prepayment, commercial mortgage loans typically have prepayment protection in the form of prepayment lockouts and yield maintenances.

[2] CDOs within this category are generally structured to be protected from prepayment risk.

[3] Prepayment speed assumption (PSA) is an industry standard prepayment speed metric used for projecting prepayments over the life of a residential mortgage loan. PSA utilizes the constant prepayment rate (CPR) assumptions. A 100% prepayment assumption assumes a prepayment rate of 0.2% per annum of the outstanding principal balance of mortgage loans in the first month. This increases by 0.2% thereafter during the term of the mortgage loan, leveling off to a CPR of 6% per annum beginning in the 30th month and each month thereafter during the term of the mortgage loan. 100 PSA equals 6 CPR.

[4] The rate was based on the weighted-average yield on the beneficial interests.

These sensitivities are hypothetical and do not reflect economic hedging activities. Changes in fair value based on a 10% or 20% variation in assumptions generally cannot be extrapolated because the relationship of the change in assumption to the change in fair value may not be linear. Also, the effect of a variation in a particular assumption on the fair value of the beneficial interests is calculated without changing any other assumption. In practice, changes in one assumption may result in changes in other assumptions (for example, increases in market interest rates may result in lower prepayments and increased credit losses), which might magnify or counteract the sensitivities.

### Secured borrowings

The following table provides the carrying amounts of transferred financial assets and the related liabilities where sale treatment was not achieved as of the end of 3Q14 and 4Q13.

▸ Refer to "Note 28 – Assets pledged and collateral" for further information.

## VARIABLE INTEREST ENTITIES

As a normal part of its business, the Group engages in various transactions that include entities that are considered VIEs and are grouped into three primary categories: CDOs, CP conduits and financial intermediation.

▸ Refer to "Variable interest entities" in V – Consolidated financial statements – Credit Suisse Group – Note 33 – Transfer of financial assets and variable interest entities in the Credit Suisse Annual Report 2013 for a detailed description of VIEs, CDOs, CP conduit or financial intermediation.

### Collateralized debt obligations

The Group engages in CDO transactions to meet client and investor needs, earn fees and sell financial assets. The Group may act as underwriter, placement agent or asset manager and may warehouse assets prior to the closing of a transaction.

### Commercial paper conduit

The Group continues to act as the administrator and provider of liquidity and credit enhancement facilities for one asset-backed CP conduit, Alpine, a client-focused multi-seller conduit vehicle. Alpine publishes portfolio and asset data and submits its portfolio to a rating agency for public ratings based on the cash flows of the portfolio taken as a whole. This CP conduit purchases assets, primarily loans and receivables, from clients and finances such purchases through the issuance of CP backed by these assets. For an asset to qualify for acquisition by the CP conduit, it must be rated at least investment grade after giving effect to the related asset-specific credit enhancement primarily provided by the client seller of the asset. The clients provide credit support to investors of the CP conduit in the form of over-collateralization and other asset-specific enhancements. Further, an unaffiliated investor retains a limited first-loss position in Alpine's entire portfolio. Alpine is a separate legal entity that is wholly owned by the Group. However, its assets are available to satisfy only the claims of its creditors. In addition, the Group, as administrator and liquidity and credit enhancement facilities provider, has significant exposure to and power over the activities of Alpine. Alpine is considered a VIE for accounting purposes and the Group is deemed the primary beneficiary and consolidates this entity.

The overall average maturity of the conduit's outstanding CP was approximately 52 days and 19 days as of 3Q14 and 4Q13, respectively. As of 3Q14 and 4Q13, Alpine had the highest short-term ratings from Moody's and Dominion Bond Rating Service and was rated A-1 by Standard & Poor's and F-1 by Fitch. The majority of Alpine's purchased assets were highly rated reverse repurchase agreements as well as advance financing receivables, equipment loans or leases, and student loans. As of 3Q14 and 4Q13, those assets had an average rating of AA, based on the lowest of each asset's internal rating and, where available, external rating, and an average maturity of 1.7 years and 2.1 years as of 3Q14 and 4Q13, respectively.

### Financial intermediation

The Group has significant involvement with VIEs in its role as a financial intermediary on behalf of clients.

Financial intermediation consists of securitizations, funds, loans and other vehicles.

### Consolidated VIEs

The Group has significant involvement with VIEs in its role as a financial intermediary on behalf of clients. The Group consolidates all VIEs related to financial intermediation for which it was the primary beneficiary.

The consolidated VIEs tables provide the carrying amounts and classifications of the assets and liabilities of consolidated VIEs as of the end of 3Q14 and 4Q13.

## Non-consolidated VIEs

The non-consolidated VIEs tables provide the carrying amounts and classification of the assets and liabilities of variable interests recorded in the Group's consolidated balance sheets, maximum exposure to loss and total assets of the non-consolidated VIEs.

Certain VIEs have not been included in the following table, including VIEs structured by third parties in which the Group's interest is in the form of securities held in the Group's inventory, certain single-asset financing vehicles not sponsored by the Group to which the Group provides financing but has very little risk of loss due to over-collateralization and guarantees, failed sales where the Group does not have any other holdings and other entities out of scope.

▸ Refer to "Variable interest entities" in V – Consolidated financial statements – Credit Suisse Group – Note 33 – Transfer of financial assets and variable interest entities in the Credit Suisse Annual Report 2013 for further information on non-consolidated VIEs.

## 27 Financial instruments

The disclosure of the Group's financial instruments below includes the following sections:

- Concentration of credit risk;
- Fair value measurement (including fair value hierarchy, transfers between levels; level 3 reconciliation; qualitative and quantitative disclosures of valuation techniques and nonrecurring fair value changes)
- Fair value option; and
- Disclosures about fair value of financial instruments not carried at fair value.

### CONCENTRATIONS OF CREDIT RISK

Credit risk concentrations arise when a number of counterparties are engaged in similar business activities, are located in the same geographic region or when there are similar economic features that would cause their ability to meet contractual obligations to be similarly impacted by changes in economic conditions.

▸ Refer to "Note 34 – Financial instruments" in V – Consolidated financial statements – Credit Suisse Group in the Credit Suisse Annual Report 2013 for further information on the Group's concentrations of credit risk.

## FAIR VALUE MEASUREMENT

A significant portion of the Group's financial instruments are carried at fair value. Deterioration of financial markets could significantly impact the fair value of these financial instruments and the results of operations.

The fair value of the majority of the Group's financial instruments is based on quoted prices in active markets or observable inputs. These instruments include government and agency securities, certain CP, most investment grade corporate debt, certain high yield debt securities, exchange-traded and certain OTC derivative instruments and most listed equity securities.

In addition, the Group holds financial instruments for which no prices are available and which have little or no observable inputs. For these instruments, the determination of fair value requires subjective assessment and judgment, depending on liquidity, pricing assumptions, the current economic and competitive environment and the risks affecting the specific instrument. In such circumstances, valuation is determined based on management's own judgments about the assumptions that market participants would use in pricing the asset or liability, including assumptions about risk. These instruments include certain OTC derivatives, including equity and credit derivatives, certain corporate equity-linked securities, mortgage-related and CDO securities, private equity investments, certain loans and credit products, including leveraged finance, certain syndicated loans and certain high yield bonds, and life finance instruments.

The fair value of financial assets and liabilities is impacted by factors such as benchmark interest rates, prices of financial instruments issued by third parties, commodity prices, foreign exchange rates and index prices or rates. In addition, valuation adjustments are an integral part of the valuation process when market prices are not indicative of the credit quality of a counterparty, and are applied to both OTC derivatives and debt instruments. The impact of changes in a counterparty's credit spreads (known as CVA) is considered when measuring the fair value of assets and the impact of changes in the Group's own credit spreads (known as DVA) is considered when measuring the fair value of its liabilities. For OTC derivatives, the impact of changes in both the Group's and the counterparty's credit standing is considered when measuring their fair value, based on current CDS prices. The adjustments also take into account contractual factors designed to reduce the Group's credit exposure to a counterparty, such as collateral held and master netting agreements. For hybrid debt instruments with embedded derivative features, the impact of changes in the Group's credit standing is considered when measuring their fair value, based on current funded debt spreads.

ASU 2011-04 permits a reporting entity to measure the fair value of a group of financial assets and financial liabilities on the basis of the price that would be received to sell a net long position or paid to transfer a net short position for a particular risk exposure in an orderly transaction between market participants at the measurement date. This change to the fair value measurement guidance is consistent with industry practice. As such, the Group continues to apply bid and offer adjustments to net portfolios of cash securities and/or derivative instruments to adjust the value of the net position from a mid-market price to the appropriate bid or offer level that would be realized under normal market conditions for the net long or net short position for a specific market risk. In addition, the Group reflects the net exposure to credit risk for its derivative instruments where the Group has legally enforceable agreements with its counterparties that mitigate credit risk exposure in the event of default. Valuation adjustments are recorded in a reasonable and consistent manner that results in an allocation to the relevant disclosures in the notes to the financial statements as if the valuation adjustment had been allocated to the individual unit of account.

### Fair value hierarchy

The levels of the fair value hierarchy are defined as follows:

- Level 1: Quoted prices (unadjusted) in active markets for identical assets or liabilities that the Group has the ability to access. This level of the fair value hierarchy provides the most reliable evidence of fair value and is used to measure fair value whenever available.
- Level 2: Inputs other than quoted prices included within level 1 that are observable for the asset or liability, either directly or indirectly. These inputs include: (i) quoted prices for similar assets or liabilities in active markets; (ii) quoted prices for identical or similar assets or liabilities in markets that are not active, that is, markets in which there are few transactions for the asset or liability, the prices are not current or price quotations vary substantially either over time or among market makers, or in which little information is publicly available; (iii) inputs other than quoted prices that are observable for the asset or liability; or (iv) inputs that are derived principally from or corroborated by observable market data by correlation or other means.
- Level 3: Inputs that are unobservable for the asset or liability. These inputs reflect the Group's own assumptions about the assumptions that market participants would use in pricing the asset or liability (including assumptions about risk). These inputs are developed based on the best information available in the circumstances, which include the Group's own data. The Group's own data used to develop unobservable inputs is adjusted if information indicates that market participants would use different assumptions.

### Transfers between level 1 and level 2

All transfers between level 1 and level 2 are reported through the last day of the reporting period.

In 9M14, transfers to level 1 out of level 2 were from trading assets and trading liabilities. The transfers were primarily in exchange traded derivatives as they moved closer to maturity and pricing inputs became more observable.

In 9M14, transfers out of level 1 to level 2 were from trading assets and from trading liabilities. The transfers from trading assets were primarily in debt and exchange traded derivatives as pricing inputs became less observable. The transfers from trading liabilities were primarily in debt as pricing inputs became less observable.

[1] Excludes net realized/unrealized gains/(losses) attributable to foreign currency translation impact.

Both observable and unobservable inputs may be used to determine the fair value of positions that have been classified within level 3. As a result, the unrealized gains and losses for assets and liabilities within level 3 presented in the table above may include changes in fair value that were attributable to both observable and unobservable inputs.

The Group employs various economic hedging techniques in order to manage risks, including risks in level 3 positions. Such techniques may include the purchase or sale of financial instruments that are classified in levels 1 and/or 2. The realized and unrealized gains and losses for assets and liabilities in level 3 presented in the table above do not reflect the related realized or unrealized gains and losses arising on economic hedging instruments classified in levels 1 and/or 2.

### Transfers in and out of level 3

Transfers into level 3 assets during 9M14 were CHF 4,873 million, primarily from trading assets and loans held-for-sale. The transfers were primarily in the corporate credit businesses due to limited observability of pricing data and reduced pricing information from external providers. Transfers out of level 3 assets during 9M14 were CHF 6,565 million, primarily in trading assets and loans held-for-sale. The transfers out of level 3 assets were primarily in the corporate credit, alternative investment, emerging markets, securitized products and prime services businesses due to improved observability of pricing data and increased availability of pricing information from external providers.

Transfers into level 3 assets during 3Q14 were CHF 2,054 million, primarily from trading assets and loans held-for-sale. The transfers were primarily in the corporate credit business due to limited observability of pricing data and reduced pricing information from external providers. Transfers out of level 3 assets during 3Q14 were CHF 2,282 million, primarily in trading assets and loans held-for-sale. The transfers out of level 3 assets were primarily in the corporate credit and securitized products businesses due to improved observability of pricing data and increased availability of pricing information from external providers.

### Qualitative disclosures of valuation techniques

#### Overview

The Group has implemented and maintains a valuation control framework, which is supported by policies and procedures that define the principles for controlling the valuation of the Group's financial instruments. Product Control and Risk Management create, review and approve significant valuation policies and procedures. The framework includes three main internal processes: (i) valuation governance; (ii) independent price verification and significant unobservable inputs review; and (iii) a cross-functional pricing model review. Through this framework, the Group determines the reasonableness of the fair value of its financial instruments.

On a monthly basis, meetings are held for each business line with senior representatives of the Front Office and Product Control to discuss independent price verification results, valuation adjustments, and other significant valuation issues. On a quarterly basis, a review of significant changes in the fair value of financial instruments is undertaken by Product Control and conclusions are reached regarding the reasonableness of those changes. Additionally, on a quarterly basis, meetings are held for each business line with senior representatives of the Front Office, Product Control, Risk Management, and Financial Accounting to discuss independent price verification results, valuation issues, business and market updates, as well as a review of significant changes in fair value from the prior quarter, significant unobservable inputs and prices used in valuation techniques, and valuation adjustments.

The results of these meetings are aggregated for presentation to the Valuation and Risk Management Committee (VARMC) and the Audit Committee. The VARMC, which is comprised of Executive Board members and the heads of the business and control functions, meets to review and ratify valuation review conclusions, and to resolve significant valuation issues for the Group. Oversight of the valuation control framework is through specific and regular reporting on valuation directly to the Group's Executive Board through the VARMC.

One of the key components of the governance process is the segregation of duties between the Front Office and Product Control. The Front Office is responsible for measuring inventory at fair value on a daily basis, while Product Control is responsible for independently reviewing and validating those valuations on a periodic basis. The Front Office values the inventory using, wherever

possible, observable market data which may include executed transactions, dealer quotes, or broker quotes for the same or similar instruments. Product Control validates this inventory using independently sourced data that also includes executed transactions, dealer quotes, and broker quotes.

Product Control utilizes independent pricing service data as part of their review process. Independent pricing service data is analyzed to ensure that it is representative of fair value including confirming that the data corresponds to executed transactions or executable broker quotes, review and assessment of contributors to ensure they are active market participants, review of statistical data and utilization of pricing challenges. The analysis also includes understanding the sources of the pricing service data and any models or assumptions used in determining the results. The purpose of the review is to judge the quality and reliability of the data for fair value measurement purposes and its appropriate level of usage within the Product Control independent valuation review.

For certain financial instruments the fair value is estimated in full or in part using valuation techniques based on assumptions that are not supported by market observable prices, rates, or other inputs. In addition, there may be uncertainty about a valuation, which results from the choice of valuation technique or model used, the assumptions embedded in those models, the extent to which inputs are not market observable, or as a consequence of other elements affecting the valuation technique or model. Model calibration is performed when significant new market information becomes available or at a minimum on a quarterly basis as part of the business review of significant unobservable inputs for level 3 instruments. For models that have been deemed to be significant to the overall fair value of the financial instrument, model validation is performed as part of the periodic review of the related model.

The Group performs a sensitivity analysis of its significant level 3 financial instruments. This sensitivity analysis estimates a fair value range by changing the related significant unobservable inputs value. This sensitivity analysis is an internal mechanism to monitor the impact of reasonable alternative inputs or prices for level 3 financial instruments. Where a model-based technique is used to determine the fair value of the level 3 financial instrument, an alternative input value is utilized to derive an estimated fair value range. Where a price-based technique is used to determine the fair value of the level 3 financial instruments, Front Office professional judgment is used to estimate a fair value range.

The following information on the valuation techniques and significant unobservable inputs of the various financial instruments, and the sensitivity of fair value measurements to changes in significant unobservable inputs, should be read in conjunction with the tables "Quantitative information about level 3 assets at fair value" and "Quantitative information about level 3 liabilities at fair value".

### Central bank funds sold, securities purchased under resale agreements and securities borrowing transactions

Securities purchased under resale agreements and securities sold under repurchase agreements are measured at fair value using discounted cash flow analysis. Future cash flows are discounted using observable market interest rate repurchase/resale curves for the applicable maturity and underlying collateral of the instruments. As such, the significant majority of both securities purchased under resale agreements and securities sold under repurchase agreements are included in level 2 of the fair value hierarchy. Structured resale and repurchase agreements include embedded derivatives, which are measured using the same techniques as described below for stand-alone derivative contracts held for trading purposes or used in hedge accounting relationships. If the value of the embedded derivative is determined using significant unobservable inputs, those structured resale and repurchase agreements are classified within level 3 of the fair value hierarchy. Significant unobservable input is funding spread.

Securities purchased under resale agreements are usually fully collateralized or over collateralized by government securities, money market instruments, corporate bonds, or other debt instruments. In the event of counterparty default, the collateral service agreement provides the Group with the right to liquidate the collateral held.

### Debt securities

#### Foreign governments and corporates

Government debt securities typically have quoted prices in active markets and are categorized as level 1 instruments. For debt securities for which market prices are not available, valuations are based on yields reflecting credit rating, historical performance, delinquencies, loss severity, the maturity of the security, recent transactions in the market or other modeling techniques, which may involve judgment. Those securities where the price or model inputs are observable in the market are categorized as level 2 instruments, while those securities where prices are not observable and significant model inputs are unobservable are categorized as level 3 of the fair value hierarchy.

Corporate bonds are priced to reflect current market levels either through recent market transactions or broker or dealer quotes. Where a market price for the particular security is not directly available, valuations are obtained based on yields reflected by other instruments in the specific or similar entity's capital structure and adjusting for differences in seniority and maturity, benchmarking to a comparable security where market data is available (taking into consideration differences in credit, liquidity and maturity), or through the application of cash flow modeling techniques utilizing observable inputs, such as current interest rate curves and observable CDS spreads. Significant unobservable inputs may include price, buyback probability, correlation and credit spread. For securities using market comparable price, the differentiation between level 2 and level 3 is based upon the relative significance of any yield adjustments as well as the accuracy of the comparison characteristics (i.e., the observable comparable security may be in the same country but a different industry and may have a different seniority level – the lower the comparability the more likely the security will be level 3).

### CMBS, RMBS and CDO securities

Fair values of RMBS, CMBS and CDO may be available through quoted prices, which are often based on the prices at which similarly structured and collateralized securities trade between dealers and to and from customers. Fair values of RMBS, CMBS and CDO for which there are significant unobservable inputs are valued using capitalization rate and discount rate. Price may not be observable for fair value measurement purposes for many reasons, such as the length of time since the last executed transaction for the related security, use of a price from a similar instrument, or use of a price from an indicative quote. Fair values determined by market comparable price may include discounted cash flow models using the inputs prepayment rate, default rate, loss severity and discount rate. Prices from similar observable instruments are used to calculate implied inputs which are then used to value unobservable instruments using discounted cash flow. The discounted cash flow price is then compared to the unobservable prices and assessed for reasonableness.

For most structured debt securities, determination of fair value requires subjective assessment depending on liquidity, ownership concentration, and the current economic and competitive environment. Valuation is determined based on the Front Office's own assumptions about how market participants would price the asset. Collateralized bond and loan obligations are split into various structured tranches and each tranche is valued based upon its individual rating and the underlying collateral supporting the structure. Valuation models are used to value both cash and synthetic CDOs.

## Equity securities

The majority of the Group's positions in equity securities are traded on public stock exchanges for which quoted prices are readily and regularly available and are therefore categorized as level 1 instruments. Level 2 and level 3 equities include fund-linked products, convertible bonds or equity securities with restrictions that are not traded in active markets. Significant unobservable inputs may include market comparable price, earnings before interest, taxes, depreciation and amortization (EBITDA) multiple, discount rate and capitalization rate.

## Derivatives

Derivatives held for trading purposes or used in hedge accounting relationships include both OTC and exchange-traded derivatives. The fair values of exchange-traded derivatives measured using observable exchange prices are included in level 1 of the fair value hierarchy. For exchange-traded derivatives where the volume of trading is low, the observable exchange prices may not be considered executable at the reporting date. These derivatives are valued in the same manner as similar observable OTC derivatives and are included in level 2 of the fair value hierarchy. If the similar OTC derivative used for valuing the exchange-traded derivative is not observable, than the exchange-traded derivative is included in level 3 of the fair value hierarchy.

The fair values of OTC derivatives are determined on the basis of either industry standard models or internally developed proprietary models. Both model types use various observable and unobservable inputs in order to determine fair value. The inputs include those characteristics of the derivative that have a bearing on the economics of the instrument. The determination of the fair value of many derivatives involves only a limited degree of subjectivity because the required inputs are observable in the marketplace, while more complex derivatives may use unobservable inputs that rely on specific proprietary modeling assumptions. Where observable inputs (prices from exchanges, dealers, brokers or market consensus data providers) are not available, attempts are made to infer values from observable prices through model calibration (spot and forward rates, mean reversion, benchmark interest rate curves and volatility inputs for commonly traded option products). For inputs that cannot be derived from other sources, estimates from historical data may be made. OTC derivatives where the majority of the value is derived from market observable inputs are categorized as level 2 instruments, while those where the majority of the value is derived from unobservable inputs are categorized as level 3 of the fair value hierarchy.

Our valuation of derivatives does not include an adjustment for the cost of funding uncollateralized OTC derivatives due to a lack of clear observability in the marketplace.

### Interest rate derivatives

OTC vanilla interest rate products, such as interest rate swaps, swaptions, and caps and floors are valued by discounting the anticipated future cash flows. The future cash flows and discounting are derived from market standard yield curves and industry standard volatility inputs. Where applicable, exchange-traded prices are also used to value exchange-traded futures and options and can be used in yield curve construction. For more complex products, inputs include, but are not limited to correlation, volatility skew, prepayment rate, credit spread, basis spread, mean reversion and gap risk.

### Foreign exchange derivatives

Foreign exchange derivatives include vanilla products such as spot, forward and option contracts where the anticipated discounted future cash flows are determined from foreign exchange forward curves and industry standard optionality modeling techniques. Where applicable, exchange-traded prices are also used for futures and option prices. For more complex products inputs include, but are not limited to prepayment rate and correlation.

### Equity and index-related derivatives

Equity derivatives include vanilla options and swaps in addition to different types of exotic options. Inputs for equity derivatives can include correlation, volatility, skew and buyback probability.

Generally, the interrelationship between the volatility and correlation is positively correlated.

### Credit derivatives

Credit derivatives include index and single name CDS in addition to more complex structured credit products. Vanilla products are

valued using industry standard models and inputs that are generally market observable including credit spread and recovery rate.

Complex structured credit derivatives are valued using proprietary models requiring unobservable inputs such as recovery rate, credit spread, correlation and funding spread. These inputs are generally implied from available market observable data. Fair values determined by price may include discounted cash flow models using the inputs prepayment rate, default rate, loss severity and discount rate.

#### Other trading assets

Other trading assets primarily include RMBS loans and life settlement and premium finance instruments. Life settlement and premium finance instruments are valued using proprietary models with several inputs. The significant unobservable inputs of the fair value for life settlement and premium finance instruments is the estimate of market implied life expectancy, while for RMBS loans it is market comparable price.

For life settlement and premium finance instruments, individual life expectancy rates are typically obtained by multiplying a base mortality curve for the general insured population provided by a professional actuarial organization together with an individual-specific multiplier. Individual-specific multipliers are determined based on data from third-party life expectancy data providers, which examine the insured individual's medical conditions, family history and other factors to arrive at a life expectancy estimate.

For RMBS loans, the use of market comparable price varies depending upon each specific loan. For some loans, similar to unobservable RMBS securities, prices from similar observable instruments are used to calculate implied inputs which are then used to value unobservable instruments using discounted cash flow. The discounted cash flow price is then compared to the unobservable prices and assessed for reasonableness. For other RMBS loans, the loans are categorized by specific characteristics, such as loan-to-value ratio, average account balance, loan type (single or multi-family), lien, seasoning, coupon, FICO score, locality, delinquency status, cash flow velocity, roll rates, loan purpose, occupancy, servicers advance agreement type, modification status, Federal Housing Administration insurance, property value and documentation quality. Loans with unobservable prices are put into consistent buckets which are then compared to market observable comparable prices in order to assess the reasonableness of those unobservable prices.

#### Other investments

##### Private equity, hedge funds and other equity investments

Other equity investments principally includes equity investments in the form of a) direct investments in third-party hedge funds, private equity funds and funds of funds, b) equity-method investments where the Group has the ability to significantly influence the operating and financial policies of the investee, and c) direct investments in non-marketable equity securities.

Direct investments in third-party hedge funds, private equity funds and funds of funds are measured at fair value based on their published net asset values (NAVs). Most of these investments are classified as level 3 of the fair value hierarchy, as there are restrictions imposed upon the redemption of the funds at their NAV in the near term. In some cases, NAVs may be adjusted where there is sufficient evidence that the NAV published by the investment manager is not current with observed market movements, it is probable that these investments will be sold for an amount other than NAV or there exist other circumstances that would require an adjustment to the published NAV. Although rarely adjusted, significant judgment is involved in making any adjustments to the published NAVs.

Direct investments in non-marketable equity securities consist of both real estate investments and non-real estate investments. Equity-method investments and direct investments in non-marketable equity securities are initially measured at their transaction price, as this is the best estimate of fair value. Thereafter, these investments are individually measured at fair value based upon a number of factors that include any recent rounds of financing involving third-party investors, comparable company transactions, multiple analyses of cash flows or book values, or discounted cash flow analyses. Unobservable input may include contingent probability. The availability of information used in these modeling techniques is often limited and involves significant judgment in evaluating these different factors over time. As a result, these investments are included in level 3 of the fair value hierarchy.

##### Life finance instruments

Life finance instruments include Single Premium Immediate Annuities (SPIA) and other premium finance instruments. Life finance instruments are valued in a similar manner as described for life settlement and premium finance instruments under the other trading assets section above.

#### Loans

The Group's loan portfolio which is measured at fair value primarily consists of commercial and industrial loans and loans to financial institutions. Within these categories, loans measured at fair value include commercial loans, real estate loans, corporate loans, leverage finance loans and emerging market loans. Fair value is based on recent transactions and quoted prices, where available. Where recent transactions and quoted prices are not available, fair value may be determined by relative value benchmarking (which includes pricing based upon another position in the same capital structure, other comparable loan issues, generic industry credit spreads, implied credit spreads derived from CDS for the specific borrower, and enterprise valuations) or calculated based on the exit price of the collateral, based on current market conditions.

Both the funded and unfunded portion of revolving credit lines on the corporate lending portfolio are valued using a CDS pricing model, which requires estimates of significant inputs including credit spreads, recovery rates, credit conversion factors, and weighted average life of the loan. Significant unobservable inputs may include credit spread, recovery rate and price.

The Group's other assets and liabilities include mortgage loans held in conjunction with securitization activities and assets and liabilities of VIEs and mortgage securitizations that do not meet the criteria for sale treatment under US GAAP. The fair value of mortgage loans held in conjunction with securitization activities is determined on a whole-loan basis and is consistent with the valuation of RMBS loans discussed in "Other trading assets" above. Whole-loan valuations are calculated based on the exit price reflecting the current market conditions. The fair value of assets and liabilities of VIEs and mortgage securitizations that do not meet the criteria for sale treatment under US GAAP are determined based on the quoted prices for securitized bonds, where available, or on cash flow analyses for securitized bonds, when quoted prices are not available.

Accrual based Private Banking & Wealth Management loans, for which an estimated fair value is disclosed in the table "Carrying value and fair value of financial instruments not carried at fair value" below, include consumer loans relating to mortgages, loans collateralized by securities or consumer finance, as well as corporate and institutional loans relating to real estate, commercial and industrial loans, and loans to financial institutions, governments and public institutions. Fair values for these loans are determined by using a discounted cash flow model. Future cash flows are discounted using risk-adjusted discount rates which are derived from observable market interest rates for the applicable maturity and currency and from counterparty-related credit spreads.

### Deposits

Accrual based deposits with a stated maturity, for which an estimated fair value is disclosed in the table "Carrying value and fair value of financial instruments not carried at fair value" below, are generally fair valued by using a discounted cash flow model incorporating the Group's credit spreads. The estimated fair value of accrual accounted deposits without a stated maturity approximates the carrying amount; however, the value does not include an estimate of the value attributed to the long-term relationships with its customers that in the aggregate adds significant value to the Group's stable deposit base.

### Short-term borrowings and long-term debt

The Group's short-term borrowings and long-term debt include structured notes (hybrid financial instruments that are both bifurcatable and non-bifurcatable) and vanilla debt. The fair value of structured notes is based on quoted prices, where available. When quoted prices are not available, fair value is determined by using a discounted cash flow model incorporating the Group's credit spreads, the value of derivatives embedded in the debt and the residual term of the issuance based on call options. Derivatives structured into the issued debt are valued consistently with the Group's stand-alone derivative contracts held for trading purposes or used in hedge accounting relationships as discussed above. The fair value of structured debt is heavily influenced by the combined call options and performance of the underlying derivative returns. Significant unobservable inputs for long-term debt include buyback probability, gap risk, correlation, volatility, credit spread and price.

Generally, the interrelationships between volatility, skew, correlation, gap risk and credit spreads inputs are positively correlated.

### Other liabilities

#### Failed sales

These liabilities represent the financing of assets that did not achieve sale accounting treatment under US GAAP. Failed sales are valued in a manner consistent with the related underlying financial instruments.

### Short-term financial instruments

Certain short-term financial instruments are not carried at fair value on the balance sheet, but a fair value has been disclosed in the table "Carrying value and fair value of financial instruments not carried at fair value" below. These instruments include: cash and due from banks, cash collateral receivables and payables and other receivables and payables arising in the ordinary course of business. For these financial instruments, the carrying value approximates the fair value due to the relatively short period of time between their origination and expected realization, as well as the minimal credit risk inherent in these instruments.

### Sensitivity of fair value measurements to changes in significant unobservable inputs

For level 3 assets with a significant unobservable input of buyback probability, EBITDA multiple, market implied life expectancy (for life finance instruments), correlation, price, volatility, volatility skew, recovery rate, funding spread, mean reversion and contingent probability, in general, an increase in the significant unobservable input would increase the fair value. For level 3 assets with a significant unobservable input of market implied life expectancy (for life settlement and premium finance instruments), capitalization rate, discount rate, prepayment rate and credit spread, in general, an increase in the significant unobservable input would decrease the fair value.

For level 3 liabilities, in general, an increase in the related significant unobservable inputs would have the inverse impact on fair value. An increase in the significant unobservable input gap risk would increase the fair value. An increase in the significant unobservable inputs basis spread and skew would decrease the fair value.

### Interrelationships between significant unobservable inputs

Except as noted above, there are no material interrelationships between the significant unobservable inputs for the financial instruments. As the significant unobservable inputs move independently, generally an increase or decrease in one significant unobservable input will have no impact on the other significant unobservable inputs.

**Quantitative disclosures of valuation techniques**

The following tables provide the representative range of minimum and maximum values and the associated weighted averages of each significant unobservable input for level 3 assets and liabilities by the related valuation technique most significant to the related financial instrument.

**Quantitative information about level 3 assets at fair value**

| end of 3Q14 | Fair value | Valuation technique | Unobservable input | Minimum value | Maximum value | Weighted average [1] |
|---|---|---|---|---|---|---|

[3] Estimate of the probability of structured notes being put back to the Group at the option of the investor over the remaining life of the financial instruments.
[4] Risk of unexpected large declines in the underlying values occuring between collateral settlement dates.

### Qualitative discussion of the ranges of significant unobservable inputs

The following sections provide further information about the ranges of significant unobservable inputs included in the tables above. The level of aggregation and diversity within the financial instruments disclosed in the tables above result in certain ranges of significant inputs being wide and unevenly distributed across asset and liability categories.

### Discount rate
The discount rate is the rate of interest used to calculate the present value of the expected cash flows of a financial instrument. There are multiple factors that will impact the discount rate for any given financial instrument including the coupon on the instrument, the term and the underlying risk of the expected cash flows. Two instruments of similar term and expected cash flows may have significantly different discount rates because the coupons on the instruments are different.

### Default rate and loss severity
For financial instruments backed by residential real estate or other assets, diversity in the portfolio is reflected in a wide range for loss severity due to varying levels of default. The lower end of the range represents high performing or government guaranteed collateral with a low probability of default or guaranteed timely payment of principal and interest, while the higher end of the range relates collateral with a greater risk of default.

### Credit spread and recovery rate
For financial instruments where credit spread is the significant unobservable input, the wide range represents positions with varying levels of risk. The lower end of the credit spread range typically represents shorter-dated instruments and/or those with better perceived credit risk. The higher end of the range typically comprises longer-dated financial instruments or those referencing non-performing, distressed or impaired reference credits. Similarly, the spread between the reference credit and an index can vary significantly based on the risk of the instrument. The spread will be positive for instruments that have a higher risk of default than the index (which is based on a weighted average of its components) and negative for instruments that have a lower risk of default than the index.

Similarly, recovery rates can vary significantly depending upon the specific assets and terms of each transaction. Transactions with higher seniority or more valuable collateral will have higher recovery rates, while those transactions which are more subordinated or with less valuable collateral will have lower recovery rates.

### Correlation
There are many different types of correlation inputs, including credit correlation, cross-asset correlation (such as equity-interest rate correlation), and same-asset correlation (such as interest rate-interest rate correlation). Correlation inputs are generally used to value hybrid and exotic instruments. Generally, same-asset correlation inputs have a narrower range than cross-asset correlation inputs. However, due to the complex and unique nature of these instruments, the ranges for correlation inputs can vary widely across portfolios.

### Prepayment rate
Prepayment rates may vary from collateral pool to collateral pool, and are driven by a variety of collateral-specific factors, including the type and location of the underlying borrower, the remaining tenor of the obligation and the level and type (e.g., fixed or floating) of interest rate being paid by the borrower.

### Volatility and skew
Volatility and skew are impacted by the underlying risk, term and strike price of the derivative. In the case of interest rate derivatives, volatility rates may vary significantly between different underlying currencies and expiration dates on the options. Similarly, equity derivatives' volatility may vary greatly depending upon the underlying reference name on the derivative.

### Market implied life expectancy
Market implied life expectancy is the primary significant unobservable input on such products as life settlement, premium finance and SPIA, and represents the estimated mortality rate for the underlying insured for each contract. This estimate may vary depending upon multiple factors including the age and specific health characteristics of each insured.

**Fair value measurements of investments in certain entities that calculate NAV per share**

Investments in funds held in trading assets and liabilities primarily include positions held in equity funds of funds as an economic hedge for structured notes and derivatives issued to clients that reference the same underlying risk and liquidity terms of the fund. A majority of these funds have limitations imposed on the amount of withdrawals from the fund during the redemption period due to illiquidity of the investments. In other instances, the withdrawal amounts may vary depending on the redemption notice period and are usually larger for the longer redemption notice periods. In addition, penalties may apply if redemption is within a certain time period from initial investment.

Investment in funds held in other investments principally involves private securities and, to a lesser extent, publicly traded securities and fund of funds. Several of these investments have redemption restrictions subject to the discretion of the Board of Directors of the fund and/or redemption is permitted without restriction, but is limited to a certain percentage of total assets or only after a certain date.

Furthermore, for those investments held in both trading assets and other investments that are nonredeemable, the underlying assets of such funds are expected to be liquidated over the life of the fund, which are generally up to ten years.

The following table pertains to investments in certain entities that calculate NAV per share or its equivalent, primarily private equity and hedge funds. These investments do not have a readily determinable fair value and are measured at fair value using NAV.

### Fair value, unfunded commitments and term of redemption conditions

[6] Includes CHF 133 million and CHF 107 million attributable to noncontrolling interests in 3Q14 and 4Q13, respectively.
[7] Includes CHF 180 million and CHF 405 million attributable to noncontrolling interests in 3Q14 and 4Q13, respectively.

### Nonrecurring fair value changes

Certain assets and liabilities are measured at fair value on a non-recurring basis; that is, they are not measured at fair value on an ongoing basis but are subject to fair value adjustments in certain circumstances, for example, when there is evidence of impairment. The Group typically uses nonfinancial assets measured at fair value on a recurring or nonrecurring basis in a manner that reflects their highest and best use.

### Nonrecurring fair value changes

| end of | 3Q14 | 4Q13 |
|---|---|---|
| **Assets held-for-sale recorded at fair value on a nonrecurring basis (CHF billion)** | | |
| **Assets held-for-sale recorded at fair value on a nonrecurring basis** | **0.4** | **0.3** |
| of which level 2 | 0.2 | 0.0 |
| of which level 3 | 0.2 | 0.3 |

## FAIR VALUE OPTION

The Group has availed itself of the simplification in accounting offered under the fair value option, primarily in Investment Banking and Private Banking & Wealth Management's Asset Management business. This has been accomplished generally by electing the fair value option, both at initial adoption and for subsequent transactions, on items impacted by the hedge accounting requirements of US GAAP. That is, for instruments for which there was an inability to achieve hedge accounting and for which the Group is economically hedged, the Group has elected the fair value option. Similarly, where the Group manages an activity on a fair value basis but previously has been unable to achieve fair value accounting, the Group has utilized the fair value option to align its risk management reporting to its financial accounting.

▸ Refer to "Note 34 – Financial instruments" in V – Consolidated financial statements – Credit Suisse Group in the Credit Suisse Annual Report 2013 for further information on the Group's election of the fair value option for certain of its financial statement captions.

## Difference between the aggregate fair value and the aggregate unpaid principal balances on loans and financial instruments

1 Primarily recognized in net interest income.
2 Primarily recognized in trading revenues.
3 Primarily recognized in other revenues.
4 Changes in fair value related to credit risk are due to the change in the Group's own credit spreads. Other changes in fair value are attributable to changes in foreign currency exchange rates and interest rates, as well as movements in the reference price or index for structured notes. Changes in fair value on Credit Suisse vanilla debt and on debit valuation adjustments on structured notes related to credit risk were CHF 131 million and CHF 97 million in 9M14, respectively, and CHF (88) million and CHF (48) million in 9M13, respectively.

## FINANCIAL INSTRUMENTS NOT CARRIED AT FAIR VALUE

The following table provides the carrying value and fair value of financial instruments which are not carried at fair value in the consolidated balance sheet. The disclosure excludes all non-financial instruments such as lease transactions, real estate, premises and equipment, equity method investments and pension and benefit obligations.

### Carrying value and fair value of financial instruments not carried at fair value

[1] Primarily includes cash and due from banks, interest-bearing deposits with banks, brokerage receivables, loans held-for-sale, cash collateral on derivative instruments, interest and fee receivables and non-marketable equity securities.

[2] Primarily includes brokerage payables, cash collateral on derivative instruments and interest and fee payables.

## 28 Assets pledged and collateral

The Group pledges assets mainly for repurchase agreements and other securities financing. Certain pledged assets may be encumbered, meaning they have the right to be sold or repledged. The encumbered assets are disclosed on the consolidated balance sheet.

### Assets pledged

| end of | 3Q14 | 4Q13 |
|---|---|---|
| **Assets pledged (CHF million)** | | |
| Total assets pledged or assigned as collateral | 143,067 | 142,952 |
| of which encumbered | 90,518 | 92,300 |

### Collateral

The Group receives cash and securities in connection with resale agreements, securities borrowing and loans, derivative transactions and margined broker loans. A substantial portion of the collateral and securities received by the Group was sold or repledged in connection with repurchase agreements, securities sold not yet purchased, securities borrowings and loans, pledges to clearing organizations, segregation requirements under securities laws and regulations, derivative transactions and bank loans.

### Collateral

| end of | 3Q14 | 4Q13 |
|---|---|---|
| **Collateral (CHF million)** | | |
| Fair value of collateral received with the right to sell or repledge | 438,548 | 359,517 |
| of which sold or repledged | 330,591 | 267,896 |

## 29 Litigation

The Group is involved in a number of judicial, regulatory and arbitration proceedings concerning matters arising in connection with the conduct of its businesses. The Group's material proceedings, related provisions and estimate of the aggregate range of reasonably possible losses that are not covered by existing provisions are described in *Note 38 – Litigation in V – Consolidated financial statements – Credit Suisse Group in the Credit Suisse Annual Report 2013* and updated in subsequent quarterly reports (including those discussed below). Some of these proceedings have been brought on behalf of various classes of claimants and seek damages of material and/or indeterminate amounts.

The Group accrues loss contingency litigation provisions and takes a charge to income in connection with certain proceedings when losses, additional losses or ranges of loss are probable and reasonably estimable. The Group also accrues litigation provisions for the estimated fees and expenses of external lawyers and other service providers in relation to such proceedings, including in cases for which it has not accrued a loss contingency provision. The Group accrues these fee and expense litigation provisions and takes a charge to income in connection therewith when such fees and expenses are probable and reasonably estimable. The Group reviews its legal proceedings each quarter to determine the adequacy of its litigation provisions and may increase or release provisions based on management's judgment and the advice of counsel. The establishment of additional provisions or releases of litigation provisions may be necessary in the future as developments in such proceedings warrant.

The specific matters described include (a) proceedings where the Group has accrued a loss contingency provision, given that it is probable that a loss may be incurred and such loss is reasonably estimable; and (b) proceedings where the Group has not accrued such a loss contingency provision for various reasons, including, but not limited to, the fact that any related losses are not reasonably estimable. The description of certain of the matters includes a statement that the Group has established a loss contingency provision and discloses the amount of such provision; for the other matters no such statement is made. With respect to the matters for which no such statement is made, either (a) the Group has not established a loss contingency provision, in which case the matter is treated as a contingent liability under the applicable accounting standard, or (b) the Group has established such a provision but believes that disclosure of that fact would violate confidentiality obligations to which the Group is subject or otherwise compromise attorney-client privilege, work product protection or other protections against disclosure or compromise the Group's management of the matter. The future outflow of funds in respect of any matter for which the Group has accrued loss contingency provisions cannot be determined with certainty based on currently available information, and accordingly may ultimately prove to be substantially greater (or may be less) than the provision that is reflected on the Group's balance sheet.

It is inherently difficult to determine whether a loss is probable or even reasonably possible or to estimate the amount of any loss or loss range for many of the Group's legal proceedings. Estimates, by their nature, are based on judgment and currently available information and involve a variety of factors, including, but not limited to, the type and nature of the proceeding, the progress of the matter, the advice of counsel, the Group's defenses and its experience in similar matters, as well as its assessment of matters, including settlements, involving other defendants in similar or related cases or proceedings. Factual and legal determinations, many of which are complex, must be made before a loss, additional losses or ranges of loss can be reasonably estimated for any proceeding.

Most matters pending against the Group seek damages of an indeterminate amount. While certain matters specify the damages claimed, such claimed amount may not represent the Group's reasonably possible losses. For certain of the proceedings discussed the Group has disclosed the amount of damages claimed and certain other quantifiable information that is publicly available.

The Group's aggregate litigation provisions include estimates of losses, additional losses or ranges of loss for proceedings for which such losses are probable and can be reasonably estimated. The Group does not believe that it can estimate an aggregate range of reasonably possible losses for certain of its proceedings because of their complexity, the novelty of some of the claims, the early stage of the proceedings, the limited amount of discovery that has occurred and/or other factors. The Group's estimate of the aggregate range of reasonably possible losses that are not covered by existing provisions for the proceedings discussed in Note 38 referenced above and updated in quarterly reports (including below) for which the Group believes an estimate is possible is zero to CHF 1.2 billion.

In 3Q14, the Group recorded net litigation provisions of CHF 390 million. After taking into account its litigation provisions, the Group believes, based on currently available information and advice of counsel, that the results of its legal proceedings, in the aggregate, will not have a material adverse effect on the Group's financial condition. However, in light of the inherent uncertainties of such proceedings, including those brought by regulators or other governmental authorities, the ultimate cost to the Group of resolving such proceedings may exceed current litigation provisions and any excess may be material to its operating results for any particular period, depending, in part, upon the operating results for such period.

**Research-related litigation**

This case was brought against Credit Suisse Securities (USA) LLC (CSS LLC) on behalf of a class of purchasers of common shares of the former AOL Time Warner Inc. (AOL) who have alleged that CSS LLC's equity research coverage of AOL between January 2001 and July 2002 was false and misleading. On January 13, 2012, the US District Court for the District of Massachusetts granted summary judgment in favor of the defendants upon its determination to preclude a plaintiff expert witness. The plaintiffs appealed the summary judgment decision. On May 14, 2014, the circuit court affirmed the grant of summary judgment. The plaintiffs then moved for rehearing and rehearing en banc. Subsequently, the circuit court denied the motion for rehearing and rehearing en banc, and therefore this case is now concluded.

**Mortgage-related matters**

The amounts disclosed below do not reflect actual realized plaintiff losses to date or anticipated future litigation exposure. Rather, unless otherwise stated, these amounts reflect the original unpaid principal balance amounts as alleged in these actions and do not include any reduction in principal amounts since issuance.

On August 21, 2014, the Superior Court of New Jersey, Chancery Division, Mercer County, dismissed without prejudice the action brought against CSS LLC and its affiliates by the New Jersey Attorney General (NJAG), on behalf of the State of New Jersey. On September 4, 2014, the NJAG filed an amended complaint against CSS LLC and its affiliates, asserting additional allegations but not expanding the number of claims or RMBS referenced in the original complaint. On September 16, 2014, the Commonwealth of Virginia (Commonwealth), on behalf of the Virginia Retirement System, filed an action against CSS LLC and other financial institutions in Virginia state court relating to an unstated amount of RMBS at issue in connection with losses allegedly incurred by the Virginia Retirement System. On October 16, 2014, the Commonwealth's claims against CSS LLC and other financial institutions based on offerings issued by affiliates of Countrywide Securities Corporation were removed to the US District Court for the Eastern District of Virginia. The Commonwealth's other claims against CSS LLC and other financial institutions remain pending in Virginia state court.

**Individual investor actions**

On July 28, 2014, the Ohio state court presiding in the action brought by the Western & Southern Life Insurance Company and affiliated entities dismissed with prejudice claims pertaining to certain RMBS offerings, reducing the RMBS at issue relating to claims against CSS LLC and its affiliates in that case by approximately USD 5 million, and on August 8, 2014, following a settlement, the Ohio state court dismissed with prejudice all remaining claims against CSS LLC and its affiliates, relating to approximately USD 255 million of RMBS at issue against CSS LLC and its affiliates. On August 25, 2014, following a settlement, the US District Court for the District of New Jersey presiding in the action brought by The Prudential Insurance Company of America and affiliated entities dismissed with prejudice all claims against CSS LLC and its affiliates, relating to approximately USD 461 million of RMBS at issue against CSS LLC and its affiliates. On August 29, 2014, the US District Court for the Southern District of New York (SDNY) presiding in the action brought by the FDIC, as receiver for Colonial Bank, dismissed in its entirety with prejudice all claims against CSS LLC, relating to approximately USD 92 million of RMBS at issue against CSS LLC. On October 2, 2014, following a settlement, the Massachusetts state court presiding in the two actions brought by Cambridge Place Investment Management Inc. dismissed with prejudice all claims against CSS LLC and its affiliates, relating to less than USD 525 million of RMBS at issue against CSS LLC and its affiliates. On October 7, 2014, following a settlement, CSS LLC and its affiliates filed a stipulation of discontinuance with prejudice to discontinue claims against CSS LLC and its affiliates relating to approximately USD 169 million of RMBS at issue brought by The Allstate Insurance Company in the Supreme Court for the State of New York, New York County.

### Class action litigations

CSS LLC and other underwriter defendants have agreed to a settlement of the class action, In re IndyMac Mortgage-Backed Securities Litigation, that is pending in the SDNY and brought on behalf of purchasers of securities in various IndyMac Bancorp RMBS offerings. In an order dated September 30, 2014, the SDNY granted preliminary approval to the settlement and scheduled a final approval hearing for February 3, 2015.

### Bank loan litigation

The Bank and other affiliates continue to be the subject of certain litigation regarding the four real estate developments that are the subject of the lawsuit filed in the US District Court for the District of Idaho and other similar real estate developments. Such litigation includes two cases brought in Texas and New York state courts against Bank affiliates by entities related to Highland Capital Management LP (Highland). The case in the Texas state court is currently scheduled to go to trial in December 2014. Bank affiliates separately sued Highland-managed funds on related trades and received a favorable judgment which has been appealed.

### Caspian Energy Litigation

A lawsuit was brought against CSI in English court by Rosserlane Consultants Limited and Swinbrook Developments Limited. The litigation relates to the forced sale by CSI in 2008 of Caspian Energy Group LP (CEG), the vehicle through which the plaintiffs held a 51% stake in the Kyurovdag oil and gas field in Azerbaijan. CEG was sold for USD 245 million following two unsuccessful merger and acquisition processes. The plaintiffs allege that CEG should have been sold for at least USD 700 million. The trial commenced in October 2014.

## 30 Subsidiary guarantee information

Certain wholly-owned finance subsidiaries of the Group, including Credit Suisse Group (Guernsey) I Limited and Credit Suisse Group (Guernsey) III Limited, each of which is a Guernsey incorporated non-cellular company limited by shares, may issue contingent convertible securities fully and unconditionally guaranteed by the Group. There are various legal and regulatory requirements, including the satisfaction of a solvency test under Guernsey law, applicable to some of the Group's subsidiaries that limit their ability to pay dividends or distributions and make loans and advances to the Group.

On March 26, 2007, the Group and the Bank issued full, unconditional and several guarantees of Credit Suisse (USA), Inc.'s outstanding SEC-registered debt securities. In accordance with the guarantees, if Credit Suisse (USA), Inc. fails to make any timely payment under the agreements governing such debt securities, the holders of the debt securities may demand payment from either the Group or the Bank, without first proceeding against Credit Suisse (USA), Inc. The guarantee from the Group is subordinated to senior liabilities. Credit Suisse (USA), Inc. is an indirect, wholly owned subsidiary of the Group.

In 4Q13, as part of an announced program to evolve the Group's legal entity structure to meet developing and future regulatory requirements and Fed regulation on establishing Intermediate Holding Companies in the US for non-US banks, several existing legal entities were re-parented as subsidiaries of Credit Suisse (USA), Inc. In the tables below, prior periods have been restated to conform to the current presentation to reflect the impact of these transactions.

**Cautionary statement regarding forward-looking information**

This report contains statements that constitute forward-looking statements. In addition, in the future we, and others on our behalf, may make statements that constitute forward-looking statements. Such forward-looking statements may include, without limitation, statements relating to the following:

- our plans, objectives or goals;
- our future economic performance or prospects;
- the potential effect on our future performance of certain contingencies; and
- assumptions underlying any such statements.

Words such as “believes,” “anticipates,” “expects,” “intends” and “plans” and similar expressions are intended to identify forward-looking statements but are not the exclusive means of identifying such statements. We do not intend to update these forward-looking statements except as may be required by applicable securities laws.

By their very nature, forward-looking statements involve inherent risks and uncertainties, both general and specific, and risks exist that predictions, forecasts, projections and other outcomes described or implied in forward-looking statements will not be achieved. We caution you that a number of important factors could cause results to differ materially from the plans, objectives, expectations, estimates and intentions expressed in such forward-looking statements. These factors include:

- the ability to maintain sufficient liquidity and access capital markets;
- market and interest rate fluctuations and interest rate levels;
- the strength of the global economy in general and the strength of the economies of the countries in which we conduct our operations, in particular the risk of continued slow economic recovery or downturn in the US or other developed countries in 2014 and beyond;
- the direct and indirect impacts of deterioration or slow recovery in residential and commercial real estate markets;
- adverse rating actions by credit rating agencies in respect of sovereign issuers, structured credit products or other credit-related exposures;
- the ability to achieve our strategic objectives, including improved performance, reduced risks, lower costs and more efficient use of capital;
- the ability of counterparties to meet their obligations to us;
- the effects of, and changes in, fiscal, monetary, trade and tax policies, and currency fluctuations;
- political and social developments, including war, civil unrest or terrorist activity;
- the possibility of foreign exchange controls, expropriation, nationalization or confiscation of assets in countries in which we conduct our operations;
- operational factors such as systems failure, human error, or the failure to implement procedures properly;
- actions taken by regulators with respect to our business and practices in one or more of the countries in which we conduct our operations;
- the effects of changes in laws, regulations or accounting policies or practices;
- competition in geographic and business areas in which we conduct our operations;
- the ability to retain and recruit qualified personnel;
- the ability to maintain our reputation and promote our brand;
- the ability to increase market share and control expenses;
- technological changes;
- the timely development and acceptance of our new products and services and the perceived overall value of these products and services by users;
- acquisitions, including the ability to integrate acquired businesses successfully, and divestitures, including the ability to sell non-core assets;
- the adverse resolution of litigation and other contingencies;
- the ability to achieve our cost efficiency goals and cost targets; and
- our success at managing the risks involved in the foregoing.

We caution you that the foregoing list of important factors is not exclusive. When evaluating forward-looking statements, you should carefully consider the foregoing factors and other uncertainties and events, including the information set forth in “Risk factors“ in I – Information on the company in our Annual Report 2013.

Our 2013 annual publication suite consisting of Annual Report and Corporate Responsibility Report, which also contains the Company Profile, is available on our website www.credit-suisse.com/investors.

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(1):

**Note:** Regulation S-T Rule 101(b)(1) only permits the submission in paper of a Form 6-K if submitted solely to provide an attached annual report to security holders.

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(7):

**Note:** Regulation S-T Rule 101(b)(7) only permits the submission in paper of a Form 6-K if submitted to furnish a report or other document that the registrant foreign private issuer must furnish and make public under the laws of the jurisdiction in which the registrant is incorporated, domiciled or legally organized (the registrant's "home country"), or under the rules of the home country exchange on which the registrant's securities are traded, as long as the report or other document is not a press release, is not required to be and has not been distributed to the registrant's security holders, and, if discussing a material event, has already been the subject of a Form 6-K submission or other Commission filing on EDGAR.

# Introduction

This report filed on Form 6-K contains certain information about Credit Suisse AG (Bank) relating to its results as of and for the three and nine months ended September 30, 2014. On October 23, 2014, Credit Suisse Group AG (Group) announced its results for such three and nine month period. A copy of the related Earnings Release is attached as an exhibit to this Form 6-K.

This Form 6-K (including the exhibit hereto) is hereby (i) incorporated by reference into the Registration Statement on Form F-3 (file no. 333-180300) and (ii) shall be deemed to be "filed" for purposes of the Securities Exchange Act of 1934, as amended except, in the case of both (i) and (ii), the information on page 3 of the Earnings Release.

The 3Q14 Credit Suisse Financial Report as of and for the three and nine months ended September 30, 2014 will be published on or about October 31, 2014.

Credit Suisse AG is a Swiss bank and joint stock corporation established under Swiss law, and is a wholly-owned subsidiary of the Group. The Bank's registered head office is in Zurich, and it has additional executive offices and principal branches in London, New York, Hong Kong, Singapore and Tokyo.

References herein to "CHF" are to Swiss francs.

# Operating and financial review and prospects

Except where noted, the business of the Bank is substantially the same as the business of the Group, and substantially all of the Bank's operations are conducted through the Private Banking & Wealth Management and Investment Banking segments. These segment results are included in Core Results. Certain other assets, liabilities and results of operations are managed as part of the activities of the two segments. However, since they are legally owned by the Group, they are not included in the Bank's consolidated financial statements. These relate principally to the activities of Neue Aargauer Bank and BANK-now, which are managed as part of Private Banking & Wealth Management. Core Results also includes certain Corporate Center activities of the Group that are not applicable to the Bank.

These operations and activities vary from period to period and give rise to differences between the Bank's consolidated assets, liabilities, revenues and expenses, including pensions and taxes, and those of the Group.

## Differences between the Group and the Bank businesses

| Entity | Principal business activity |
|---|---|
| Neue Aargauer Bank | Banking (in the Swiss canton of Aargau) |
| BANK-now | Private credit and car leasing (in Switzerland) |
| Financing vehicles of the Group | Special purpose vehicles for various funding activities of the Group, including for purposes of raising consolidated capital |

# Earnings Release

## Credit Suisse 3Q14 results: Core pre-tax income of CHF 1,622 million for strategic businesses and return on equity of 11%; reported Core pre-tax income of CHF 1,301 million and return on equity of 10%

## Credit Suisse 9M14 results: Core pre-tax income of CHF 5,341 million for strategic businesses and return on equity of 13%; reported Core pre-tax income of CHF 2,331 million and return on equity of 4%

## Look-through CET1 ratio of 9.8% as of the end of 3Q14; on track to exceed 10% by year-end 2014

## 3Q14 Private Banking & Wealth Management results for strategic businesses reflect continued cost discipline and stable revenues; strategic net new assets of CHF 8.8 billion and total net new assets of CHF 7.4 billion

## 3Q14 Investment Banking results reflect stronger profitability and returns, as well as increased client activity; continued progress in winding down non-strategic unit

**Private Banking & Wealth Management strategic businesses with continued progress on costs:**

- Strategic businesses with pre-tax income of CHF 872 million, up 8% compared to 3Q13; return on regulatory capital of 27%
- 3Q14 total reported pre-tax income of CHF 943 million, reflecting solid strategic business performance and a gain recorded in the non-strategic unit on the sale of the domestic private banking business booked in Germany
- Continued cost efficiency gains in strategic businesses with cost/income ratio of 69% for 9M14 and 3Q14
- Wealth Management Clients net margin of 27 basis points for 9M14 and 25 basis points for 3Q14; excluding certain litigation provisions of CHF 41 million, net margin of 27 basis points for 3Q14
- Strong net new assets from strategic businesses of CHF 8.8 billion in 3Q14, with particularly strong growth in Asia Pacific, notwithstanding continued outflows of CHF 0.7 billion from Western European cross-border business due to ongoing regularization of asset base; total net new assets of CHF 7.4 billion, including total Western European cross-border outflows of CHF 1.5 billion
- Sustained growth from ultra-high-net-worth individual lending initiatives with good momentum across both emerging and mature markets; CHF 3.9 billion in net new lending for 9M14 compared to CHF 1.0 billion in 9M13

**Investment Banking 3Q14 strategic results reflect substantially increased profitability, improved returns and robust client activity:**

- Strategic businesses with pre-tax income of CHF 995 million, up 43% against 3Q13, and return on regulatory capital of 17%; driven by higher client activity across many businesses
- Strong fixed income performance, particularly in securitized products and emerging markets
- Stable equities results as robust derivatives revenues were offset by muted trading volumes in cash equities
- Underwriting and advisory results reflect strong origination activity and sustained market shares
- Total reported pre-tax income of CHF 516 million with broad-based increase in client activity across many strategic businesses, partly offset by increased expenses
- 9M14 return on regulatory capital of 19% from strategic businesses and 11% from total reported results
- Continued progress in wind-down of non-strategic unit with risk-weighted assets reduced by USD 2 billion and leverage exposure reduced by USD 11 billion

**Resilient capital base and leverage ratio as of the end of 3Q14; progress toward exceeding 10% Look-through CET1 ratio by year-end:**

- Look-through BIS CET1 ratio of 9.8%; progress in executing capital measures announced after settlement of the US cross-border matter and on track to exceed 10% by year-end, including continued accrual of cash dividend for 2014; Look-through Swiss total capital ratio at 15.8%
- Look-through Swiss leverage ratio of 3.8%, within reach of the 2019 requirement of 4.1%, effective in 2015; targeting approximately 4.5% by end-2015

**On track to reach cost reduction targets:**

- Delivered CHF 3.6 billion of adjusted annualized savings compared to the annualized expense run rate for 6M11; on track towards target of over CHF 4.5 billion by end-2015

For further information on the differences between return on equity and return on regulatory capital, which are primarily due to the treatment of goodwill and capital components ineligible for look-through regulatory capital under Basel III, refer to the Appendix.

October 23, 2014 **Credit Suisse Group reports 3Q14 and 9M14 results**

Brady W. Dougan, Chief Executive Officer, said: "We delivered a good performance, with our strategic businesses generating returns on equity of 11% for the quarter and 13% for the first nine months of this year. During the quarter, our momentum with clients across both divisions remained strong. With a Look-through CET1 ratio of 9.8% at quarter end, we are executing our capital measures and are on track to exceed 10% by the end of the year."

Commenting on Private Banking & Wealth Management, he said: "Our profitability benefitted from ongoing cost discipline, although margins remain subdued and revenues continue to be impacted by the low interest-rate environment. We generated net new assets of CHF 8.8 billion in our strategic businesses, driven by strong growth in emerging markets, particularly in Asia Pacific. This was partly offset by continued outflows from the Western European cross-border business due to the importance that we have placed on the regularization of our asset base. We saw sustained growth in our ultra-high-net-worth individual lending initiative and increased collaboration revenues across both divisions, which we view as a competitive advantage, particularly with this client segment."

Commenting on Investment Banking, he said: "Investment Banking's strategic results reflect substantially increased profitability, improved returns and robust client activity across many of our businesses. Our strong results in fixed income trading, especially in emerging markets and securitized products, and in equity underwriting were driven by significant client transactions. We continued to work towards increasing the capital and cost efficiency of our strategic businesses, reporting a return on regulatory capital of 19% and a cost/income ratio of 69% for the first nine months of this year. We also made further progress in winding down the capital positions in our non-strategic unit."

On the outlook for the fourth quarter, he said: "We have seen a mixed start to October, with recent market volatility benefitting certain businesses across both divisions, while negatively impacting others. We have a strong advisory and underwriting pipeline but the pace of execution in the fourth quarter will depend on market conditions."

## Core Results summary

For additional information on financial information presented in this Earnings Release, including references to return on equity and return on regulatory capital, refer to the tabular disclosures in the Appendix and other explanatory disclosures regarding capital and leverage metrics in the section titled "Important information" on page 19.

Core Results do not include noncontrolling interests without significant economic interests.

**Net income attributable to shareholders** was CHF 1,025 million in 3Q14.

**Income before taxes** of CHF 1,301 million increased 89% compared to 3Q13, reflecting a 20% increase in net revenues, partially offset by a 10% increase in total operating expenses. In strategic businesses, income before taxes of CHF 1,622 million increased 15% compared to 3Q13. In the non-strategic businesses, the loss before taxes was CHF 321 million in 3Q14 compared to a loss before taxes of CHF 728 million in 3Q13.

**Net revenues** of CHF 6,537 million increased 20% compared to 3Q13. In the strategic businesses, net revenues increased 10% to CHF 6,287 million compared to 3Q13, primarily reflecting higher net revenues in Investment Banking and stable net revenues in Private Banking & Wealth Management. In the non-strategic businesses, net revenues were CHF 250 million in 3Q14 compared to negative net revenues of CHF 244 million in 3Q13.

**Provision for credit losses** was CHF 59 million in 3Q14, with net provisions of CHF 36 million in Investment Banking and CHF 25 million in Private Banking & Wealth Management.

**Total operating expenses** of CHF 5,177 million were up 10% compared to 3Q13, primarily reflecting 15% higher general and administrative expenses and 9% higher compensation and benefits. In strategic businesses, total operating expenses of CHF 4,612 million increased 8% compared to 3Q13, mainly reflecting a 12% increase in compensation and benefits and a 8% increase in general and administrative expenses. In non-strategic businesses, total operating expenses of CHF 565 million increased 22% compared to 3Q13, primarily reflecting a 55% increase in general and administrative expenses, partially offset by a 34% decrease in compensation and benefits. Business realignment costs in 3Q14 were CHF 93 million.

**Income tax expense** of CHF 366 million recorded in 3Q14 mainly reflected the impact of the geographical mix of results. Overall, net deferred tax assets increased CHF 258 million to CHF 5,392 million mainly driven by foreign exchange movements as of the end of 3Q14 compared to 2Q14. Deferred tax assets on net operating losses increased CHF 232 million to CHF 990 million during 3Q14. The Core Results effective tax rate was 28.1% in 3Q14, compared to (83.0)% in 2Q14. The 2Q14 effective tax rate reflected that the majority of the litigation settlement charge was non-deductible.

**Range of reasonably possible losses related to certain legal proceedings.** The Group's estimate of the aggregate range of reasonably possible losses that are not covered by existing provisions for certain proceedings for which the Group believes an estimate is possible was zero to CHF 1.2 billion at the end 3Q14.

**Diluted earnings per share from continuing operations** were CHF 0.55 for 3Q14 compared to CHF 0.17 in 3Q13 and a diluted loss per share of CHF (0.45) in 2Q14.

**Capital and leverage.** As of the end of 3Q14, Credit Suisse reported a BIS Look-through common equity tier 1 (CET1) ratio of 9.8%, compared to 9.5% as of the end of 2Q14. As of the end of 3Q14, the Look-through Swiss total capital ratio was 15.8%, compared to 15.3% as of the end of 2Q14.

The CET1 ratio as of the end of 3Q14 was 14.3%, compared to 13.8% as of the end of 2Q14, reflecting an increase in CET1 capital, partially offset by an increase in Basel III risk-weighted assets for the Group, which increased to CHF 292.9 billion as of the end of 3Q14. The increase in risk-weighted assets reflected a significant increase resulting from the foreign exchange impact. Excluding the foreign exchange impact, credit risk and market risk decreased.

As of the end of 3Q14, Credit Suisse's Swiss leverage exposure amounted to CHF 1,240 billion. The Look-through Swiss leverage ratio was 3.8%.

**Benefits of the integrated bank.** In 3Q14, Credit Suisse generated CHF 1.2 billion of collaboration revenues from the integrated bank. This corresponds to 17.6% of Core net revenues in 3Q14.

## Private Banking & Wealth Management

In 3Q14, Private Banking & Wealth Management reported income before taxes of CHF 943 million and net revenues of CHF 3,125 million. In its **strategic businesses**, Private Banking & Wealth Management reported income before taxes of CHF 872 million and net revenues of CHF 2,939 million. Compared to 3Q13, income before taxes increased 8%, mainly driven by lower operating expenses reflecting continued cost efficiency gains. Net revenues were stable compared to 3Q13 as higher transaction- and performance-based revenues and improved other revenues were offset by lower net interest income. Compared to 2Q14, income before taxes was stable reflecting stable net revenues and stable operating expenses. In its **non-strategic businesses**, Private Banking & Wealth Management reported income before taxes of CHF 71 million which included a CHF 109 million gain on the sale of the domestic private banking business booked in Germany. In 3Q14, assets under management for the division were CHF 1,366.1 billion and the division attracted net new assets of CHF 7.4 billion.

In 3Q14, the strategic businesses for Private Banking & Wealth Management reported income before taxes of CHF 872 million and net revenues of CHF 2,939 million.

Compared to 3Q13, net revenues were stable with higher transaction- and performance-based revenues and improved other revenues offset by lower net interest income. Transaction- and performance-based revenues were higher reflecting higher brokerage and product issuing fees, significantly higher corporate advisory fees and a gain related to a more capital-efficient positioning of the liquidity portfolio, partially offset by lower foreign exchange client business and significantly lower performance fees and carried interest. Other revenues improved due to an equity participations impairment in 3Q13 and higher investment-related gains in 3Q14. In a low interest rate environment, net interest income decreased due to significantly lower deposit margins on slightly higher average deposit volumes partially offset by stable loan margins on higher average loan volumes. Recurring commissions and fees were stable with higher discretionary mandate management fees, slightly higher investment account and services fees and slightly higher asset management fees offset by lower banking services fees and lower investment product management fees.

Net revenues, mainly in Wealth Management Clients, benefitted from the appreciation of the US dollar and were stable compared to 2Q14 with improved other revenues offset by lower transaction- and performance-based revenues. Improved other revenues mainly reflected a higher fair value loss on the Clock Finance transaction in 2Q14. The decrease in transaction- and performance-based revenues reflected significantly lower performance fees and carried interest, seasonally lower brokerage and product issuing fees and lower sales and trading income, partially offset by higher corporate advisory fees. Recurring commissions and fees were stable with higher investment product management fees offset by slightly lower asset management and banking services fees. Net interest income was stable with slightly higher loan margins on slightly higher average loan volumes offset by lower deposit margins on stable average deposit volumes.

Provision for credit losses was CHF 26 million, compared to CHF 13 million in 3Q13 and CHF 30 million in 2Q14.

Total operating expenses were 3% lower compared to 3Q13 and stable compared to 2Q14. Compared to 3Q13, compensation and benefits decreased 5%, mainly reflecting lower salary expenses, driven by lower headcount, and general and administrative expenses were stable with higher litigation provisions offset by lower infrastructure and occupancy expenses. Compared to 2Q14, compensation and benefits decreased 3% reflecting lower social security costs and lower discretionary compensation expenses. General and administrative expenses increased 9%, primarily reflecting higher litigation provisions, partially offset by lower professional services fees and lower travel and entertainment expenses.

The cost/income ratio for strategic results was 69% in 3Q14, down three percentage points compared to 3Q13 and up one percentage point compared to 2Q14.

| Cost/income ratio | 72.9 | 70.9 | 74.3 | – | – | 71.7 | 74.3 | – |

The *Wealth Management Clients* business in 3Q14 reported income before taxes of CHF 536 million and net revenues of CHF 2,042 million. Net revenues were stable compared to 3Q13, with lower net interest income offset by higher transaction- and performance-based revenues. Lower net interest income reflected the low interest rate environment, significantly lower deposit margins on stable average deposit volumes, slightly lower loan margins on higher average loan volumes and lower levels of deposits eligible as stable funding. Higher transaction- and performance-based revenues reflected higher brokerage and product issuing fees, significantly higher corporate advisory fees arising from integrated solutions revenues and a gain related to a more capital-efficient positioning of the liquidity portfolio, partially offset by lower foreign exchange client business. Recurring commissions and fees were stable with higher discretionary mandate management fees and slightly higher investment account and services fees offset by lower banking services fees and lower investment product management fees.

Compared to 2Q14, net revenues were stable, driven by slightly higher recurring commissions and fees. Recurring commissions and fees were slightly higher with higher investment product management fees, higher discretionary mandate management fees and slightly higher investment account and services fees partially offset by slightly lower banking services fees. Stable net interest income reflected slightly higher loan margins on slightly higher average loan volumes, offset by lower deposit margins on stable average deposit volumes. Transaction- and performance-based revenues were stable reflecting significantly higher corporate advisory fees and the gain related to a more capital-efficient positioning of the liquidity portfolio offset by seasonally lower brokerage and product issuing fees and lower sales and trading income.

In 3Q14, the gross margin was 97 basis points, eight basis points lower compared to 3Q13, mainly reflecting the continued adverse interest rate environment and an 8.1% increase in average assets under management. Compared to 2Q14, the gross margin was down two basis points due to a 3.3% increase in average assets under management driven by the appreciation of the US dollar.

Wealth Management Clients net margin was 25 basis points in 3Q14, one basis point lower compared to 3Q13, with lower net interest income partially offset by higher transaction- and performance-based revenues and slightly lower operating expenses. Compared to 2Q14, the net margin was three basis points lower, driven by higher litigation provisions.

| Cost/income ratio | 49.0 | 52.8 | 51.3 | – | – | 50.5 | 50.6 | – |

The *Corporate & Institutional Clients* business reported income before taxes of CHF 240 million in 3Q14 and net revenues of CHF 488 million. Net revenues decreased 2% compared to 3Q13, mainly driven by slightly lower net interest income, slightly lower recurring commissions and fees and decreased other revenues. The slight decrease in net interest income reflected the low interest rate environment, lower levels of deposits eligible as stable funding and significantly lower deposit margins on higher average deposit volumes, partially offset by higher loan margins on higher average loan volumes. Recurring commissions and fees decreased slightly with no significant movements across major categories. Lower other revenues reflected a higher fair value loss on the Clock Finance transaction. Slightly higher transaction- and performance-based revenues reflected significantly higher corporate advisory fees.

Compared to 2Q14, net revenues increased 3%, with improved other revenues and slightly higher net interest income partially offset by lower transaction- and performance-based revenues. Improved other revenues reflected a higher fair value loss on the Clock Finance transaction in 2Q14. Slightly higher net interest income reflected higher loan margins on slightly higher average loan volumes, partially offset by lower deposit margins on stable average deposit volumes. Lower transaction- and performance-based revenues mainly reflected lower sales and trading income. Stable recurring commissions and fees reflected higher investment product management fees and higher banking services fees, offset by lower discretionary mandate management fees.

| **Metrics (%)** | | | | | | | | |
| Cost/income ratio | 76.5 | 76.8 | 87.1 | – | – | 74.2 | 80.9 | – |

The *Asset Management* business income before taxes of CHF 96 million in 3Q14, with net revenues of CHF 409 million. Net revenues increased 10% compared to 3Q13, with improved equity participations and other gains, reflecting an impairment of CHF 18 million related to Asset Management Finance LLC recognized in 3Q13, and higher investment-related gains, reflecting gains in hedge fund investments in 3Q14. Fee-based revenues were stable with higher equity participations income and slightly higher asset management fees due to higher average assets under management offset by lower performance fees, in particular from credit products. Net revenues declined 7% compared to 2Q14, primarily due to lower fee-based revenues mainly driven by significantly lower performance fees and significantly lower carried interest on realized private equity gains, partially offset by higher equity participations income and higher transaction fees. Lower performance fees mainly reflected lower fees from credit products and lower fees from single manager hedge funds.

The fee-based margin was 42 basis points in 3Q14, compared to 45 basis points in 3Q13 and 46 basis points in 2Q14. The movements reflected both the lower fee-based revenues and the higher average assets under management, which increased 10.4% and 3.6% compared to 3Q13 and 2Q14, respectively.

## Non-strategic results

*The non-strategic results for Private Banking & Wealth Management include positions relating to the restructuring of the former Asset Management division, run-off operations relating to the small markets exit initiative and certain legacy cross-border related run-off operations, litigation costs, primarily related to US cross-border matters, the impact of restructuring of the German onshore operations, other smaller non-strategic positions formerly in the Corporate & Institutional Clients business and the run-off and active reduction of selected products.*

### Private Banking & Wealth Management – non-strategic results

In 3Q14, the non-strategic businesses reported income before taxes of CHF 71 million including the CHF 109 million gain on the sale of the domestic private banking business booked in Germany. In 2Q14, Private Banking & Wealth Management's non-strategic businesses reported a loss before taxes of CHF 1,631 million, driven by the litigation settlement charge of CHF 1,618 million relating to the final settlement of all outstanding US cross-border matters.

## Assets under management – Private Banking & Wealth Management

**Assets under management** of CHF 1,366.1 billion increased CHF 36.4 billion compared to the end of 2Q14, driven mainly by favorable foreign exchange-related movements resulting from the appreciation of the US dollar, positive market movements and net new assets.

**Net new assets:** Private Banking & Wealth Management recorded net new assets of CHF 7.4 billion in 3Q14. In the strategic portfolio, Wealth Management Clients contributed net new assets of CHF 5.1 billion in 3Q14 with continued strong inflows from emerging markets, particularly in Asia Pacific, partially offset by Western European cross-border outflows. Corporate & Institutional Clients in Switzerland reported net new assets of CHF 0.9 billion in 3Q14. Asset Management reported net new assets of CHF 3.3 billion in 3Q14, driven mainly by inflows in traditional products, including inflows from a joint venture in emerging markets, credit products and private equity investments. In the non-strategic portfolio, net asset outflows of CHF 1.4 billion reflected the exit of certain businesses.

## Investment Banking

In 3Q14, Investment Banking reported income before taxes of CHF 516 million and net revenues of CHF 3,303 million. Investment Banking delivered solid results and profitability reflecting strong client activity and sustained market shares across most businesses. Net revenues in the **strategic businesses** increased 24% compared to subdued 3Q13 levels, driven by significant client deals across products and regions, particularly in the fixed income business. Compared to 2Q14, net revenues were stable, reflecting resilient operating conditions across many of the businesses. In 3Q14, Investment Banking made continued progress in winding down the **non-strategic unit**, reducing Swiss leverage exposure by USD 11 billion to USD 66 billion and Basel III risk-weighted assets by USD 2 billion to USD 12 billion, each compared to 2Q14.

## Strategic results

In 3Q14, the strategic businesses reported income before taxes of CHF 995 million and net revenues of CHF 3,419 million. Fixed income sales and trading revenues were substantially higher compared to 3Q13, driven by higher client activity resulting in significant gains across most products. Revenues were also higher compared to 2Q14, reflecting continued favorable operating conditions across many of the businesses. Equities sales and trading results were slightly lower compared to both 3Q13 and 2Q14, as weaker performance in systematic market making and cash equities offset strength in derivatives and prime services. Underwriting and advisory results were strong compared to 3Q13, driven by robust debt and equity underwriting performance and higher advisory revenues. Revenues were flat compared to 2Q14, consistent with a slowdown in industry-wide activity. Total operating expenses increased 17% compared to 3Q13, primarily driven by higher discretionary compensation expenses. Compared to 2Q14, total operating expenses increased slightly. During the quarter, the strategic businesses reported Basel III risk-weighted assets of USD 159 billion, a reduction of USD 7 billion compared to 2Q14. This decrease was primarily driven by reductions in the prime services and global macro products franchises. At the end of 3Q14, Swiss leverage exposure was USD 791 billion, an increase of USD 14 billion from 2Q14.

**Fixed income sales and trading** Fixed income revenues improved substantially from subdued 3Q13 levels, driven by increased client activity across many products. 3Q13 performance was adversely impacted by a significant decline in client trading activity due to rising rates and widening credit spreads as a result of the US Federal Reserve's announcement to reduce its bond buying program. Revenues in the diversified securitized products franchise were robust, reflecting higher results in non-agency and agency securities and continued momentum in asset finance. A significant improvement in emerging markets results was driven by higher trading revenues across local markets and solid client financing activity. Revenues in global macro products improved, reflecting higher market volatility and increased client activity, particularly in the foreign exchange business. Global credit products revenues were solid, albeit lower, reflecting weaker leverage finance trading performance, as increased market volatility had an adverse impact on revenues. Compared to 2Q14, revenues were higher, driven by continued favorable operating conditions across many of the businesses. Emerging markets revenues were significantly higher, driven by robust origination and trading activity. Higher global macro products revenues were driven by improved foreign exchange results. Securitized products revenues were robust, primarily driven by strong asset finance results and higher agency revenues. Global credit products revenues declined, primarily driven by lower leveraged finance results, reflecting less favorable trading conditions.

**Equity sales and trading** Stable results in equity sales and trading reflected muted trading activity. Systematic market making results were substantially lower compared to a strong 3Q13 performance, which included the positive impact of quantitative easing in Japan. Cash equities revenues also declined due to reduced commission revenues as a result of lower US market volumes and subdued activity in Brazil. Derivatives revenues increased significantly, driven by strong growth in fee-based products, distributed by Private Banking and Wealth Management, particularly in Asia Pacific. Revenues in prime services were higher, reflecting growth in client balances and portfolio optimization initiatives. Compared to 2Q14, revenues declined, primarily driven by lower revenues in systematic market making and cash equities due to less favorable trading conditions. These declines were partially offset by strong derivatives revenues. Prime services revenues also increased following a strong 2Q14 performance, which included the positive impact of the seasonally strong dividend season.

**Underwriting and advisory** Debt underwriting had significantly higher revenues, reflecting strong leveraged finance performance. The increase was partially offset by lower investment grade revenues, as a decline in the overall investment grade fee pool offset an increase in share of wallet, which refers to Credit Suisse's share of the overall fee pool for the respective products. Compared to 3Q13, equity underwriting results reflected significantly higher revenues from IPOs, including the landmark Alibaba transaction. Convertibles results were also significantly higher, reflecting an increase in both share of wallet and the overall convertibles fee pool. Results also reflected higher revenues from follow-on offerings. Compared to 3Q13 advisory revenues were higher, driven by an increase in the overall M&A fee pool and strong corporate activity. Compared to 2Q14, debt underwriting results reflected higher revenues from structured lending in emerging markets. The increase was partially offset by lower leveraged finance revenues as a decline in the overall leveraged finance fee pool more than offset an increase in share of wallet. Investment grade revenues were also lower reflecting a decline in industry activity. Equity underwriting had lower revenues in IPOs and follow-on offerings, consistent with a decline in overall industry volumes following strong 2Q14 activity. The increase in advisory revenues compared to 2Q14 reflected an increase in share of wallet.

| **Income before taxes** | **995** | **1,042** | **697** | (5) | 43 | **3,165** | **3,413** | (7) |
| **Metrics (%)** | | | | | | | | |
| Return on regulatory capital | 17.1 | 18.7 | 12.4 | – | – | 18.9 | 19.9 | – |
| Cost/income ratio | 70.0 | 69.3 | 74.4 | – | – | 69.2 | 66.9 | – |

**Total operating expenses** Total operating expenses increased 17% compared to 3Q13, primarily driven by higher discretionary compensation expenses reflecting the higher results. The deferred compensation expenses from prior-year awards and salaries expenses also increased. The increase in general and administrative expenses was driven by higher litigation expenses, which offset cost reductions in infrastructure initiatives. Compared to 2Q14, total operating expenses increased 2%, primarily driven by higher litigation expenses and higher UK bank levy expenses, partially offset by lower discretionary compensation expenses.

**Capital metrics** Investment Banking strategic businesses reported Basel III risk-weighted assets of USD 159 billion, a reduction of USD 7 billion compared to 2Q14. This decrease was primarily driven by reductions in the prime services and global macro products franchises. At the end of 3Q14, Swiss leverage exposure was USD 791 billion, an increase of USD 14 billion compared to 2Q14.

## Non-strategic results

*Non-strategic results for Investment Banking include the fixed income wind-down portfolio, legacy rates business, primarily non-exchange-cleared instruments and capital-intensive structured positions, commodities trading business, legacy funding costs associated with non-Basel III compliant debt instruments, as well as certain legacy litigation costs and other small non-strategic positions.*

### Investment Banking – non-strategic results

| | | | in / end of | | % change | | in / end of | % change |
|---|---|---|---|---|---|---|---|---|
| | **3Q14** | 2Q14 | 3Q13 | QoQ | YoY | **9M14** | 9M13 | YoY |
| **Non-strategic results (CHF million)** | | | | | | | | |
| **Net revenues** | **(116)** | **(38)** | **(197)** | 205 | (41) | **(278)** | **(418)** | (33) |
| **Provision for credit losses** | **7** | **0** | **0** | – | – | **7** | **2** | 250 |
| **Total operating expenses** | **356** | **252** | **271** | 41 | 31 | **785** | **710** | 11 |
| **Loss before taxes** | **(479)** | **(290)** | **(468)** | 65 | 2 | **(1,070)** | **(1,130)** | (5) |

In 3Q14, Investment Banking made continued progress in winding down the non-strategic unit, including the reduction of Basel III risk-weighted assets and Swiss leverage exposure, and completed the transfer of the commodities trading business into the non-strategic unit. Non-strategic businesses reported a loss before taxes of CHF 479 million and negative net revenues of CHF 116 million in 3Q14. Compared to 3Q13, negative net revenues were smaller, reflecting portfolio net valuation gains and improved funding costs from proactive management of both the legacy debt instruments and trading assets. Negative net revenues were higher compared to 2Q14, which included positive net valuation gains in the portfolio. 3Q14 results also reflected higher costs to exit positions in the legacy rates portfolio. Total operating expenses increased compared to both 3Q13 and 2Q14, driven by higher litigation provisions. As of the end of 3Q14, Investment Banking non-strategic businesses reported Basel III risk-weighted assets of USD 12 billion, down USD 9 billion from 3Q13 and down USD 2 billion from 2Q14. This compares to a risk-weighted assets target of USD 6 billion by year-end 2015. Swiss leverage exposure in non-strategic businesses of USD 66 billion reflected a reduction of USD 28 billion from 3Q13 and a reduction of USD 11 billion from 2Q14. This compares to a target of USD 24 billion in Swiss leverage exposure by year-end 2015.

## Corporate Center

*Corporate Center includes parent company operations such as Group financing, expenses for projects sponsored by the Group and certain expenses and revenues that have not been allocated to the segments. It also includes consolidation and elimination adjustments required to eliminate intercompany revenues and expenses.*

The Corporate Center recorded a loss before taxes of CHF 158 million in 3Q14 compared to a loss before taxes of CHF 559 million in 3Q13 and a loss before taxes of CHF 373 million in 2Q14. The Corporate Center recorded a loss before taxes of CHF 245 million in its strategic results. Non-strategic results reported income before taxes of CHF 87 million, primarily including fair value gains on own credit spreads of CHF 351 million, partially offset by reclassifications to discontinued operations of CHF 106 million related to the sale of the domestic private banking business booked in Germany, IT architecture simplification expenses of CHF 69 million and business realignment costs of CHF 69 million, primarily consisting of severance and other compensation expenses relating to the Group-wide cost efficiency initiatives.

## Balance sheet, shareholders' equity and regulatory capital

### Balance sheet

As of the end of 3Q14, total assets of CHF 954.4 billion increased 7% compared to 2Q14, reflecting the foreign exchange translation impact and an increase from operating activities. Excluding the foreign exchange translation impact, total assets increased CHF 18.1 billion.

### Total shareholders' equity

Credit Suisse's total shareholders' equity increased to CHF 43.9 billion as of the end of 3Q14 compared to CHF 40.9 billion as of the end of 2Q14. Total shareholders' equity was positively impacted by foreign exchange-related movements on cumulative translation adjustments, net income and an increase in the share-based compensation obligation. These movements were partially offset by transactions relating to the hedging of future share-based compensation awards. As of the end of 3Q14, Credit Suisse had 1,607.2 million shares issued.

### BIS regulatory capital and ratios – Basel III

The CET1 ratio was 14.3% as of the end of 3Q14, compared to 13.8% as of the end of 2Q14, reflecting an increase in CET1 capital, partially offset by an increase in risk-weighted assets. Credit Suisse's tier 1 ratio was 16.4% as of the end of 3Q14, compared to 16.0% as of the end of 2Q14. The total capital ratio increased to 20.1% as of the end of 3Q14 compared to 19.5% as of the end of 2Q14.

CET1 capital was CHF 41.8 billion as of the end of 3Q14 compared to CHF 39.5 billion as of the end of 2Q14, mainly reflecting a positive foreign exchange impact, net income and the net effect of share-based compensation. CET1 capital was also impacted by a quarterly dividend accrual.

Additional tier 1 capital increased to CHF 6.3 billion and tier 2 capital increased to CHF 10.6 billion as of the end of 3Q14, mainly due to the positive foreign exchange impact.

Total eligible capital was CHF 58.8 billion as of the end of 3Q14 compared to CHF 55.6 billion as of the end of 2Q14, reflecting the increases in CET1 capital, additional tier 1 capital and tier 2 capital.

As of the end of 3Q14, the Look-through CET1 ratio was 9.8% compared to a year-end target of over 10.0% and a long-term target of 11.0%.

### Capital ratios – Basel III

| | Phase-in | | | Look-through | | |
|---|---|---|---|---|---|---|
| end of | **3Q14** | 2Q14 | 4Q13 | **3Q14** | 2Q14 | 4Q13 |
| **BIS capital ratios (%)** | | | | | | |
| CET1 ratio | 14.3 | 13.8 | 15.7 | 9.8 | 9.5 | 10.0 |
| Tier 1 ratio | 16.4 | 16.0 | 16.8 | 13.6 | 13.1 | 12.8 |
| Total capital ratio | 20.1 | 19.5 | 20.6 | 15.9 | 15.4 | 15.1 |

### Swiss regulatory capital and ratios

As of the end of 3Q14, Swiss CET1 capital and Swiss total capital ratios were 14.2% and 20.0%, respectively, compared to the Swiss capital ratio phase-in requirements of 6.75% and 10.18%, respectively.

On a look-through basis, Swiss CET1 capital was CHF 27.8 billion and the Swiss CET1 ratio was 9.7% as of the end of 3Q14. Swiss total eligible capital was CHF 45.4 billion and the Swiss total capital ratio was 15.8% as of the end of 3Q14, each on a look-through basis.

### Swiss leverage ratio

As of the end of 3Q14, the Swiss leverage ratio was 4.9% and total average exposure was CHF 1,204.7 billion. As of the end of 3Q14, Swiss total exposure was CHF 1,240 billion compared to Credit Suisse's target of approximately CHF 1,050 billion by end-2015, on a foreign exchange adjusted basis. The Look-through Swiss leverage ratio was 3.8% as of the end of 3Q14, compared to the current 4.0% requirement for 2019. For 2015, the Swiss leverage ratio requirement for 2019 will be 4.1%.

### Swiss leverage ratio

| | | | Phase-in | | | Look-through |
|---|---|---|---|---|---|---|
| end of | **3Q14** | 2Q14 | 4Q13 | **3Q14** | 2Q14 | 4Q13 |
| **Leverage ratios (%)** | | | | | | |
| Swiss leverage ratio | 4.9 | 4.8 | 5.1 | 3.8 | 3.7 | 3.7 |

## Important information

The Group has not finalized its 3Q14 Financial Report and the Group's independent registered public accounting firm has not completed its review of the condensed consolidated financial statements (unaudited) for the period. Accordingly, the financial information contained in this Earnings Release is subject to completion of quarter-end procedures, which may result in changes to that information. Certain reclassifications have been made to prior periods to conform to the current presentation.

For purposes of this Earnings Release, unless the context otherwise requires, the terms "Credit Suisse" and "the Group" mean Credit Suisse Group AG and its consolidated subsidiaries. The business of Credit Suisse AG, the Swiss bank subsidiary of the Group, is substantially similar to the Group, and these terms are used to refer to both when the subject is the same or substantially similar. The term "the Bank" is used when referring to Credit Suisse AG, the Swiss bank subsidiary of the Group, and its consolidated subsidiaries.

Information referenced in this Earnings Release, whether via website links or otherwise, is not incorporated into this Earnings Release.

As of January 1, 2013, Basel III was implemented in Switzerland along with the Swiss "Too Big to Fail" legislation and regulations thereunder. The related disclosures are in accordance with Credit Suisse's current interpretation of such requirements, including relevant assumptions. Changes in the interpretation of these requirements in Switzerland or in any of Credit Suisse's assumptions or estimates could result in different numbers from those shown herein.

References to phase-in and look-through included herein refer to Basel III requirements. Phase-in reflects that for the years 2014 – 2018, there will be a five-year (20% per annum) phase in of goodwill and other intangible assets and other capital deductions (e.g., certain deferred tax assets and participations in financial institutions) and for the years 2013 – 2022, there will be a phase out of certain capital instruments. Look-through assumes the full phase-in of goodwill and other intangible assets and other regulatory adjustments and the full phase out of certain capital instruments.

Unless otherwise noted, leverage ratio, leverage exposure and total capital amounts included herein are based on the current FINMA framework. The Swiss leverage ratio is calculated as Swiss total eligible capital, divided by a three-month average leverage exposure, which consists of balance sheet assets, off-balance sheet exposures, which consist of guarantees and commitments, and regulatory adjustments, which include cash collateral netting reversals and derivative add-ons.

Return on equity for strategic results is calculated by dividing annualized strategic net income by average strategic shareholders' equity (derived by deducting 10% of non-strategic risk-weighted assets from reported shareholders' equity). Return on regulatory capital is calculated using income after tax and capital allocated based on the average of 10% of average risk-weighted assets and 2.4% of average leverage exposure.

Adjusted cost run-rates are non-GAAP financial measures. All expense reduction metrics against 6M11 annualized total expenses are measured at constant foreign exchange rates and exclude realignment and other significant expense items and variable compensation expenses. For further information regarding these measures, see the 3Q14 Results Presentation Slides.

The Group's estimate of the aggregate range of reasonably possible losses that are not covered by existing provisions which is discussed above relates only to those proceedings for which the Group believes an estimate is possible and which are discussed in Note 38 to the Consolidated Financial Statements in the Group's Annual Report on Form 20-F and updated in its quarterly reports (including the 3Q14 Financial Report that is scheduled to be released on October 31). It is inherently difficult to determine whether a loss is probable or even reasonably possible or to estimate the amount of any loss or loss range for many of the Group's legal proceedings. The Group's aggregate litigation provisions include estimates of losses, additional losses or ranges of loss for proceedings for which such losses are probable and can be reasonably estimated. The Group does not believe that it can estimate an aggregate range of reasonably possible losses for certain of its proceedings because of their complexity, the novelty of some of the claims, the early stage of the proceedings, the limited amount of discovery that has occurred and/or other factors. For additional details, see Note 38 to the Consolidated Financial Statements in the Group's Annual Report on Form 20-F and the litigation note in each of its quarterly Financial Reports.

Strategic net new assets are determined based on the assumption that assets managed across businesses relate to strategic businesses only.

Investors and others should note that we announce material information (including quarterly earnings releases and financial reports) to the investing public using press releases, SEC and Swiss ad hoc filings, our investor relations website and public conference calls and webcasts. We intend to also use our investor relations Twitter account @creditsuisse (https://twitter.com/creditsuisse) to excerpt key messages from our public disclosures, including earnings releases. We may retweet such messages through certain of our regional Twitter accounts, including @csschweiz (https://twitter.com/csschweiz) and @csapac (https://twitter.com/csapac). Investors and others should take care to consider such abbreviated messages in the context of the disclosures from which they are excerpted. The information we post on these Twitter accounts is not a part of this Earnings Release.

In various tables, use of "–" indicates not meaningful or not applicable.

| Number of employees | 45,500 | 45,100 | 46,400 | 1 | (2) | 45,500 | 46,400 | (2) |

[1] Based on tangible shareholders' equity attributable to shareholders, a non-GAAP financial measure, which is calculated by deducting goodwill and other intangible assets from total shareholders' equity attributable to shareholders. Management believes that the return on tangible shareholders' equity attributable to shareholders is meaningful as it allows consistent measurement of the performance of businesses without regard to whether the businesses were acquired.

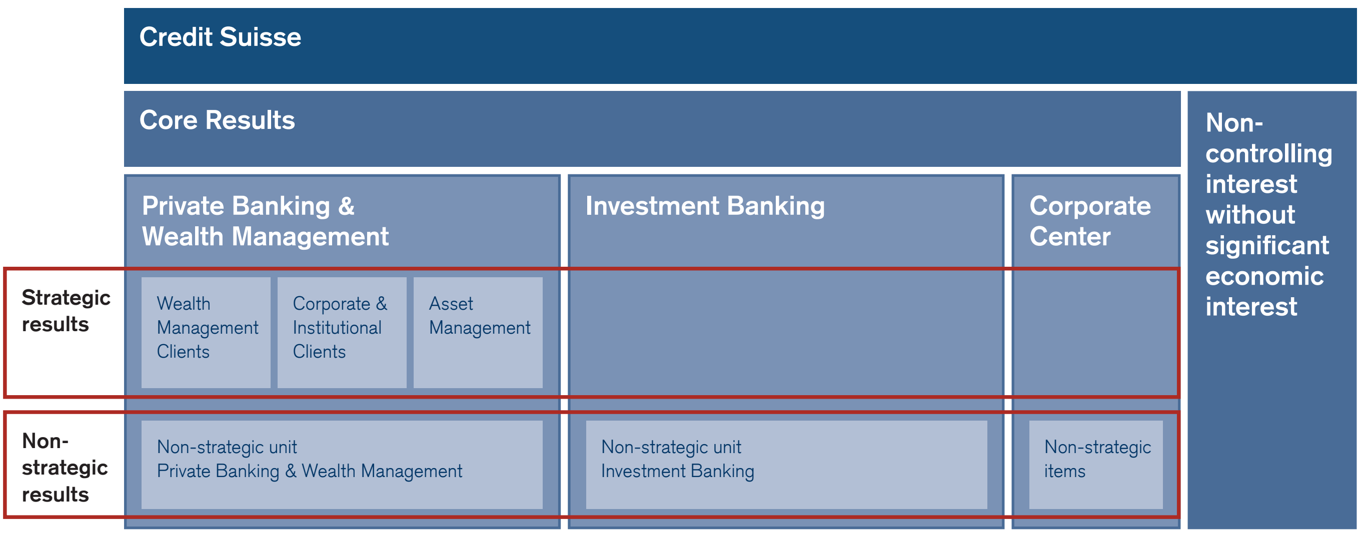
## Credit Suisse reporting structure



Credit Suisse results include revenues and expenses from the consolidation of certain private equity funds and other entities in which we have noncontrolling interests without significant economic interest (SEI) in such revenues and expenses. Core Results include the results of our two segments and the Corporate Center and discontinued operations, but do not include noncontrolling interests without SEI.

Beginning in 2Q13, fees collected in an agent role in connection with certain customized fund services we provide to clients where those fees are passed on directly to a third-party investment manager are now presented on a net basis per the applicable accounting standards. These fees were previously recorded on a gross basis as fee income and commission expense. Prior periods have been restated to conform to the current presentation.

[1] Net revenues divided by average assets under management.

[2] Income before taxes divided by average assets under management.

[1] Business realignment costs relating to divisional realignment costs are prospectively presented in the relevant divisional non-strategic results beginning in 4Q13.
[2] Represents legacy funding costs associated with non-Basel III compliant debt instruments.
[3] Includes reclassifications to discontinued operations of revenues and expenses arising from the sale of ETF, secondary private equity and Customized Fund Investment Group businesses and the domestic private banking business booked in Germany.

## Impact from movements in own credit spreads

Core Results revenues are impacted by changes in credit spreads on fair-valued Credit Suisse long-term vanilla debt and debit valuation adjustments (DVA) relating to certain structured notes liabilities carried at fair value. Core Results are also impacted by fair value gains/(losses) on stand-alone derivatives relating to certain of our funding liabilities and reflect the volatility of cross-currency swaps and yield curve volatility and, over the life of the derivatives, will result in no net gains/(losses). These fair value gains/(losses) are recorded in the Corporate Center.

| in | **3Q14** | 2Q14 | 3Q13 | **9M14** | 9M13 |

1 Distributions to owners in funds include the return of original capital invested and any related dividends.
2 Transactions with and without ownership changes related to fund activity are all displayed under "not changing ownership".
3 Includes a net tax charge of CHF (36) million from the excess recognized compensation expense over fair value of shares delivered.
4 The Group had purchased certain call options on its own shares to economically hedge share-based compensation awards. In accordance with US GAAP, these call options were designated as equity instruments and, as such, were initially recognized in shareholders' equity at their fair values and not subsequently remeasured.
5 Includes a net tax charge of CHF (75) million from the excess recognized compensation expense over fair value of shares delivered.
6 Paid out of reserves from capital contributions.

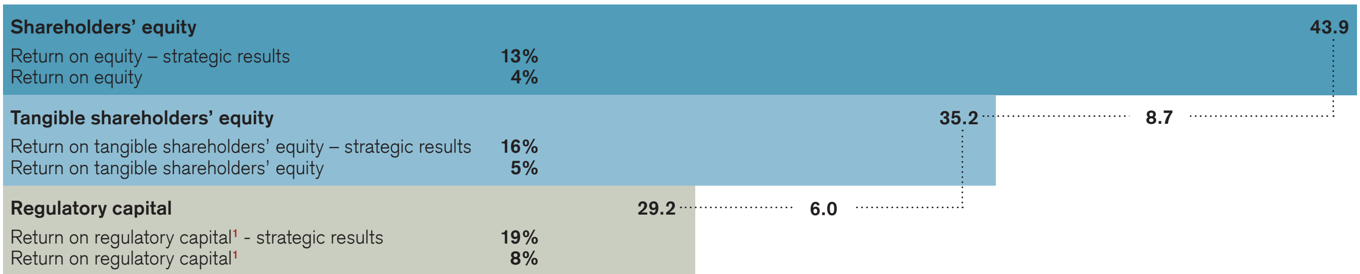
[1] Reflects MACCS issued in July 2012 that were mandatorily convertible into shares on March 29, 2013, which shares were settled and delivered on April 8, 2013.
[2] Reflects changes in the fair value of the PAF2 units which were reflected in the net results of the Group until the awards were finally settled. In 1Q14, the Group restructured the PAF2 awards as due to regulatory changes the capital relief provided by PAF2 awards was no longer available under Basel III. The PAF2 units were converted into other capital eligible compensation instruments and will no longer be settleable in Credit Suisse Group shares.
[3] Reflects weighted-average shares outstanding on PAF2 units. In 1Q14, the Group restructured the PAF2 awards as due to regulatory changes the capital relief provided by PAF2 awards was no longer available under Basel III. The PAF2 units were converted into other capital eligible compensation instruments and will no longer be settleable in Credit Suisse Group shares.
[4] Weighted-average potential common shares relating to instruments that were not dilutive for the respective periods (and therefore not included in the diluted earnings per share calculation above) but could potentially dilute earnings per share in the future were 8.7 million, 8.8 million, 33.7 million, 8.8 million and 12.3 million for 3Q14, 2Q14, 3Q13, 9M14 and 9M13, respectively.
[5] Due to the net loss in 2Q14, 1.3 million weighted-average share options and warrants outstanding and 12.2 million weighted-average share awards outstanding were excluded from the diluted earnings per share calculation, as the effect would be antidilutive.

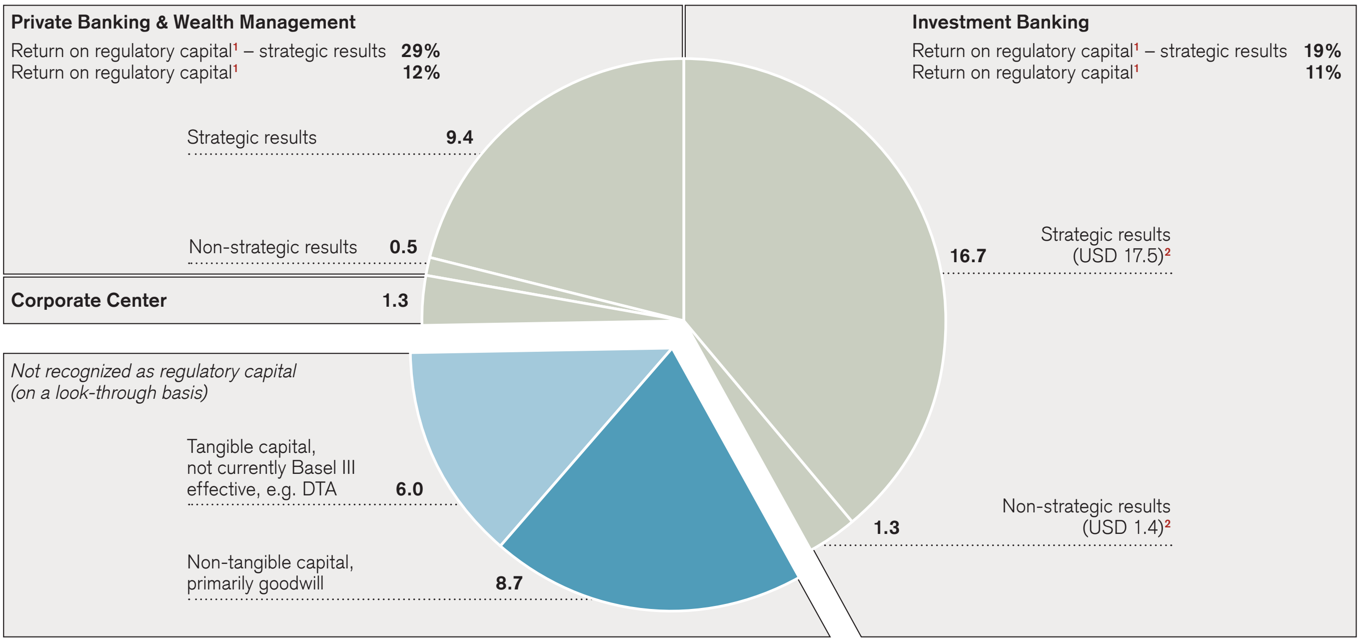
## Relationship between total shareholders’ equity, tangible shareholders’ equity and regulatory capital

Credit Suisse measures firm-wide returns against total shareholders’ equity and tangible shareholders’ equity. In addition, it also measures the efficiency of the firm and its divisions with regards to the usage of capital as determined by the minimum requirements set by regulators. This regulatory capital is calculated as the average of 10% of risk-weighted assets and 2.4% of the leverage exposure utilized by each division and the firm as a whole. These percentages are used in the calculation in order to reflect the 2019 fully phased in Swiss regulatory minimum requirements for Basel III CET1 capital and leverage ratio.

End of 3Q14 / in 9M14 (CHF billion, except where indicated)



### Regulatory capital allocation



[1] Calculated using income after tax, assumes tax rate of 30% and capital allocated on average of 10% of average risk-weighted assets and 2.4% of average leverage exposure.
[2] For Investment Banking, capital allocation and return calculation are based on US dollar denominated numbers.

**Cautionary statement regarding forward-looking information**

This press release contains statements that constitute forward-looking statements. In addition, in the future we, and others on our behalf, may make statements that constitute forward-looking statements. Such forward-looking statements may include, without limitation, statements relating to the following:

- our plans, objectives or goals;
- our future economic performance or prospects;
- the potential effect on our future performance of certain contingencies; and
- assumptions underlying any such statements.

Words such as "believes," "anticipates," "expects," "intends" and "plans" and similar expressions are intended to identify forward-looking statements but are not the exclusive means of identifying such statements. We do not intend to update these forward-looking statements except as may be required by applicable securities laws.

By their very nature, forward-looking statements involve inherent risks and uncertainties, both general and specific, and risks exist that predictions, forecasts, projections and other outcomes described or implied in forward-looking statements will not be achieved. We caution you that a number of important factors could cause results to differ materially from the plans, objectives, expectations, estimates and intentions expressed in such forward-looking statements. These factors include:

- the ability to maintain sufficient liquidity and access capital markets;
- market and interest rate fluctuations and interest rate levels;
- the strength of the global economy in general and the strength of the economies of the countries in which we conduct our operations, in particular the risk of continued slow economic recovery or downturn in the US or other developed countries in 2014 and beyond;
- the direct and indirect impacts of continuing deterioration or slow recovery in residential and commercial real estate markets;
- adverse rating actions by agencies in respect of sovereign issuers, structured credit products or other credit-related exposures;
- the ability to achieve our objectives, including improved performance, reduced risks, lower costs, and more efficient use of capital;
- the ability of counterparties to meet their obligations to us;
- the effects of, and changes in, fiscal, monetary, trade and tax policies, and currency fluctuations;
- political and social developments, including war, civil unrest or terrorist activity;
- the possibility of foreign exchange controls, expropriation, nationalizations or confiscations in countries where we conduct operations;
- operational factors such as systems failure, human error, or the failure to implement procedures properly;
- actions taken by regulators with respect to our business and practices in one or more of the countries where we conduct operations;
- the effects of changes in laws, regulations or accounting policies or practices;
- competition in geographic and business areas in which we conduct our operations;
- the ability to retain and recruit qualified personnel;
- the ability to maintain our reputation and promote our brand;
- the ability to increase market share and control expenses;
- technological changes;
- the timely development and acceptance of our new products and services and the perceived overall value of these products and services by users;
- acquisitions, including the ability to integrate businesses successfully, and divestitures, including the ability to sell non-core assets;
- the adverse resolution of litigation and other contingencies;
- the ability to achieve our cost efficiency goals and cost targets; and
- our success at managing the risks involved in the foregoing.

We caution you that the foregoing list of important factors is not exclusive. When evaluating forward-looking statements, you should carefully consider the foregoing factors and other uncertainties and events, including the information set forth in "Risk Factors" in I – Information on the company in our Annual Report 2013.

**Note:** Regulation S-T Rule 101(b)(7) only permits the submission in paper of a Form 6-K if submitted to furnish a report or other document that the registrant foreign private issuer must furnish and make public under the laws of the jurisdiction in which the registrant is incorporated, domiciled or legally organized (the registrant's "home country"), or under the rules of the home country exchange on which the registrant's securities are traded, as long as the report or other document is not a press release, is not required to be and has not been distributed to the registrant's security holders, and, if discussing a material event, has already been the subject of a Form 6-K submission or other Commission filing on EDGAR.

# Introduction

On July 31, 2014, the Credit Suisse Financial Report 2Q14 was published. A copy of the Financial Report is attached as an exhibit to this report on Form 6-K. This report on Form 6-K (including the exhibits hereto) is hereby (i) incorporated by reference into the Registration Statement on Form F-3 (file no. 333-180300) and (ii) shall be deemed to be “filed” for purposes of the Securities Exchange Act of 1934, as amended, except, in the case of both (i) and (ii), the sections of the attached Financial Report entitled “Dear shareholders”, “Investor information” and “Financial calendar and contacts”.

Credit Suisse Group AG and Credit Suisse AG file an annual report on Form 20-F and furnish or file quarterly reports, including unaudited interim financial information, and other reports on Form 6-K with the US Securities and Exchange Commission (SEC) pursuant to the requirements of the Securities Exchange Act of 1934, as amended. The SEC reports of Credit Suisse Group AG and Credit Suisse AG are available to the public over the internet at the SEC’s website at www.sec.gov and from the SEC’s Public Reference Room at 100 F Street, N.E., Washington, D.C. 20549 (telephone 1-800-SEC-0330). The SEC reports of Credit Suisse Group AG and Credit Suisse AG are also available under “Investor Relations” on Credit Suisse Group AG’s website at www.credit-suisse.com and at the offices of the New York Stock Exchange, 20 Broad Street, New York, NY 10005.

Unless the context otherwise requires, references herein to “Credit Suisse Group,” “Credit Suisse,” “the Group,” “we,” “us” and “our” mean Credit Suisse Group AG and its consolidated subsidiaries and the term “the Bank” means Credit Suisse AG, the Swiss bank subsidiary of the Group, and its consolidated subsidiaries.

SEC regulations require certain information to be included in registration statements relating to securities offerings. Such additional information for the Bank is included in this report on Form 6-K, which should be read together with the Group’s and the Bank’s annual report on Form 20-F for the year ended December 31, 2013 (Credit Suisse 2013 20-F), the Group’s financial report for the first quarter of 2014, furnished to or filed with the SEC on Form 6-K on May 2, 2014, and the Group’s financial report for the second quarter of 2014, furnished to or filed with the SEC as Exhibit 99.1 hereto.

The Bank, a Swiss bank and joint stock corporation established under Swiss law, is a wholly-owned subsidiary of the Group. The Bank’s registered head office is in Zurich, and it has additional executive offices and principal branches in London, New York, Hong Kong, Singapore and Tokyo.

References herein to “CHF” are to Swiss francs.

# Forward-looking statements

This Form 6-K and the information incorporated by reference in this Form 6-K include statements that constitute forward-looking statements. In addition, in the future the Group, the Bank and others on their behalf may make statements that constitute forward-looking statements.

When evaluating forward-looking statements, you should carefully consider the cautionary statement regarding forward-looking information, the risk factors and other information set forth in the Credit Suisse 2013 20-F, and subsequent annual reports on Form 20-F filed by the Group and the Bank with the SEC and the Group’s and the Bank’s reports on Form 6-K furnished to or filed with the SEC, and other uncertainties and events.

# Key information

## Condensed consolidated financial statements

The Bank's condensed consolidated financial statements – unaudited as of and for the six months ended June 30, 2014 and 2013 are attached as Exhibit 99.2 to this Form 6-K.

# Operating and financial review and prospects

Except where noted, the business of the Bank is substantially the same as the business of the Group, and substantially all of the Bank's operations are conducted through the Private Banking & Wealth Management and Investment Banking segments. These segment results are included in Core Results. Certain other assets, liabilities and results of operations are managed as part of the activities of the two segments. However, since they are legally owned by the Group, they are not included in the Bank's consolidated financial statements. These relate principally to the activities of Neue Aargauer Bank and BANK-now, which are managed as part of Private Banking & Wealth Management. Core Results also includes certain Corporate Center activities of the Group that are not applicable to the Bank.

These operations and activities vary from period to period and give rise to differences between the Bank's consolidated assets, liabilities, revenues and expenses, including pensions and taxes, and those of the Group.

The discussion of the Group's Core Results for the six months ended June 30, 2014 compared to the six months ended June 30, 2013 is included in the Group's Form 6-K filed with the SEC on July 31, 2014 and incorporated herein by reference. For further information on the differences between the Group and the Bank, refer to *Note 30 – Subsidiary guarantee information in III – Condensed consolidated financial statements – unaudited in the Group's financial report for the second quarter of 2014 (Credit Suisse Financial Report 2Q14)*.

# Letter regarding unaudited financial information from the Independent Registered Public Accounting Firm

Credit Suisse AG
Zurich, Switzerland

**Re: Registration Statement No. 333-180300**

With respect to the subject registration statement, we acknowledge our awareness of the incorporation by reference therein of our report dated July 31, 2014 related to our review of interim financial information of Credit Suisse AG as of June 30, 2014 and for the six-month periods ended June 30, 2014 and 2013.

Pursuant to Rule 436 under the Securities Act of 1933 (the Act), such report is not considered part of a registration statement prepared or certified by an independent registered public accounting firm, or a report prepared or certified by an independent registered public accounting firm within the meaning of Sections 7 and 11 of the Act.

Urs Rohner, Chairman of the Board of Directors (left) and Brady W. Dougan, Chief Executive Officer.

## DEAR SHAREHOLDERS

The second quarter of 2014 was a period of substantial progress for Credit Suisse. In addition to resolving our most significant and longstanding legacy litigation issue, we saw continued strong momentum with clients and made progress in winding down our non-strategic portfolio. We maintained a resilient capital base and leverage ratio despite the impact of the settlement of the US cross-border matter. And we remain on track to reach our cost reduction targets.

Our reported results for both the second quarter and the first half of 2014 were impacted by the final settlement regarding all outstanding US cross-border matters. Driven by the previously announced CHF 1.6 billion litigation settlement charge, we reported a net loss attributable to shareholders of CHF 700 million for the quarter and net income of CHF 159 million for the first half of 2014.

As many of you are aware, we introduced the concept of "strategic results" last year to reflect management responsibilities following the set-up of non-strategic units. This reporting structure also serves to give you a more accurate picture of the performance of our key businesses, excluding the impact of businesses we have chosen to exit and other non-strategic positions and items. The results of these non-strategic units are disclosed each quarter as our "non-strategic results". We think it is helpful for our investors to know how our business performs when excluding the drag from the non-strategic units.

In the second quarter, our strategic businesses reported net income of CHF 1,282 million and a return on equity of 13%. These solid strategic results demonstrate the resilience of our business model, despite subdued client trading activity in certain areas which impacted both Private Banking & Wealth Management and Investment Banking.

**Progress in our two divisions**

In Private Banking & Wealth Management, reported results were substantially impacted by the settlement litigation charge. Our strategic businesses in Private Banking & Wealth Management generated pre-tax income of CHF 882 million and a continued high return on capital of 28%.

We further improved the efficiency of our strategic businesses with operating expenses down 8% compared to last year's second quarter. These lower expenses helped us to mitigate the impact on our margins of higher levels of assets under management, a change in client mix, subdued transaction activity and the continued low interest rate environment. We were able to sustain our net margin in Wealth Management Clients at 28 basis points, while our gross margin decreased by 5 basis points during the second quarter to 99 basis points.

We saw strong net new assets of CHF 11.8 billion in the quarter from our strategic businesses, driven by growth in Asia Pacific and Switzerland. We achieved an annualized net new asset growth rate of 4% in our strategic businesses, despite CHF 2.9 billion of outflows from our Western European cross-border business. Including the non-strategic portion, these outflows totaled CHF 4.1 billion. The outflows were driven by our proactive measures to regularize our asset base in Western Europe. We consider this regularization process to be necessary in the context of the secular transformation of the global cross-border banking industry. We also made further progress with our lending initiatives for ultra-high-net-worth clients during the second quarter, particularly in Asia Pacific.

In Investment Banking, we delivered solid results in the second quarter, reflecting strong origination activity, continued momentum in our yield franchises and improved capital efficiency. We generated pre-tax income of CHF 1,034 million for our strategic businesses and a return on capital of 18%, demonstrating the stability of our strategic franchise. The strong results of our underwriting businesses and fixed income yield franchises were partly offset by less favorable trading conditions in equities and continued weakness in global macro products.

We have further increased the capital efficiency of Investment Banking since last quarter and expect the restructuring of the macro business to drive further capital, leverage and expense reductions. As part of this restructuring, we are announcing our exit from the commodities trading business in order to reallocate resources to more profitable businesses.

**Progress in executing strategy to support cash returns to shareholders**

In the first half of the year, we continued to optimize resource allocation in order to grow our high-returning businesses, particularly in Private Banking & Wealth Management. At the same time, we made progress in winding down positions in our non-strategic units and in resolving legacy litigation matters.

We are ahead of schedule in winding down positions and losses in our non-strategic units. We have reduced risk-weighted assets by USD 6 billion and our leverage exposure by USD 3 billion in the Investment Banking non-strategic unit during the quarter.

The settlement of all outstanding US cross-border matters, along with the Federal Housing Finance Agency (FHFA) settlement in March, brought to a close the most significant outstanding litigation matters for Credit Suisse. We want to reiterate that we deeply regret the past misconduct that led to the settlement with the US authorities and that we take full responsibility for it. The continued trust and support of our clients helped us to mitigate the impact of these settlements on our businesses. We would like to thank all of our employees for their contribution as we worked to resolve these issues and for their continuous outreach to clients. It is because of their professionalism that our clients continue to regard Credit Suisse as their partner.

We are executing the capital measures we announced in May, which are expected to fully mitigate the impact of the US cross-border settlement on our capital position. As of the end of the second quarter, our look-through CET1 ratio stood at 9.5%, compared to 9.3% at the end of the first quarter, had the settlement charge been applied at that time. We remain on track to improve our Look-through CET1 ratio to above 10% by the end of this year. This includes the continued accrual of cash dividends for 2014. Once we reach 10% and as we continue to accrete capital toward our 11% long-term target, we intend to return approximately half our earnings to shareholders through annual distributions.

We would like to thank you, our shareholders and clients, for the trust you have placed in Credit Suisse.

Sincerely

Urs Rohner    Brady W. Dougan

July 2014

As of January 1, 2013, Basel III was implemented in Switzerland along with the Swiss "Too Big to Fail" legislation and regulations thereunder. The related disclosures are in accordance with the current interpretation of such requirements, including relevant assumptions. Changes in the interpretation of these requirements in Switzerland or in any of Credit Suisse's assumptions or estimates could result in different numbers from those shown herein.

Unless otherwise noted, leverage ratio, leverage exposure and total capital amounts included herein are based on the current FINMA framework. The Swiss leverage ratio is calculated as Swiss total eligible capital, divided by a three-month average leverage exposure, which consists of balance sheet assets, off-balance sheet exposures, which consist of guarantees and commitments, and regulatory adjustments, which include cash collateral netting reversals and derivative add-ons.

All expense reduction metrics against 6M11 annualized total expenses are measured at constant foreign exchange rates and exclude realignment and other significant expense items and variable compensation expenses. For further information regarding these measures, see the 2Q14 Results Presentation Slides.

Refer to "Results overview" in II – Operating and financial review – Core Results in our Annual Report 2013 for further information on Core Results.

# Financial Report 2Q14

For purposes of this report, unless the context otherwise requires, the terms "Credit Suisse," "the Group," "we," "us" and "our" mean Credit Suisse Group AG and its consolidated subsidiaries. The business of Credit Suisse AG, the Swiss bank subsidiary of the Group, is substantially similar to the Group, and we use these terms to refer to both when the subject is the same or substantially similar. We use the term "the Bank" when we are only referring to Credit Suisse AG, the Swiss bank subsidiary of the Group, and its consolidated subsidiaries.

Abbreviations are explained in the List of abbreviations in the back of this report.

Publications referenced in this report, whether via website links or otherwise, are not incorporated into this report.

In various tables, use of "–" indicates not meaningful or not applicable.

# Credit Suisse at a glance

**Credit Suisse**

As one of the world's leading financial services providers, we are committed to delivering our combined financial experience and expertise to corporate, institutional and government clients, to ultra-high-net-worth and high-net worth individuals worldwide, as well as affluent and retail clients in Switzerland. Founded in 1856, today we have a global reach with operations in over 50 countries and 45,100 employees from approximately 150 different nations. Our broad footprint helps us to generate a geographically balanced stream of revenues and net new assets and allows us to capture growth opportunities around the world. We serve our clients through our two divisions, which cooperate closely to provide holistic financial solutions, including innovative products and specially tailored advice.

**Private Banking & Wealth Management**

Private Banking & Wealth Management offers comprehensive advice and a wide range of financial solutions to private, corporate and institutional clients. The Private Banking & Wealth Management division comprises the Wealth Management Clients, Corporate & Institutional Clients and Asset Management businesses. Our Wealth Management Clients business serves ultra-high-net-worth and high-net-worth individuals around the globe, as well as affluent and retail clients in Switzerland. Our Corporate & Institutional Clients business serves the needs of corporations and institutional clients, mainly in Switzerland. Asset Management offers a wide range of investment products and solutions across diverse asset classes and investment styles, serving governments, institutions, corporations and individuals worldwide.

**Investment Banking**

Investment Banking provides a broad range of financial products and services, including global securities sales, trading and execution, prime brokerage and capital raising services, corporate advisory and comprehensive investment research, with a focus on businesses that are client driven, flow-based and capital-efficient. Clients include corporations, governments, institutional investors, including pension funds and hedge funds, and private individuals around the world. Credit Suisse delivers its investment banking capabilities via regional and local teams based in major global financial centers. Strongly anchored in Credit Suisse's integrated model, Investment Banking works closely with Private Banking & Wealth Management to provide clients with customized financial solutions.

# I

# Credit Suisse results

# Operating environment

Global economic activity improved in 2Q14. Major equity markets increased during the quarter and volatility decreased to low levels. Long-dated government benchmark bond yields decreased. The performance of the US dollar against most major currencies was mixed in 2Q14.

## ECONOMIC ENVIRONMENT

Economic developments in 2Q14 were mainly characterized by the recovery in the US and China following signs of softening at the beginning of the year. Leading indicators in the US improved continuously throughout the quarter, signaling that gross domestic product (GDP) growth was likely to show a rebound as well. Labor and housing market data also indicated that the economy's underlying growth trend was robust. Inflation rates rose slightly, but nominal wage growth remained below the long-term average. Despite a significant slowdown in Chinese private real estate investment, the economy appears to have stabilized due to targeted stimulus measures taken by the government. Japan's economy showed a significant deceleration in retail sales and industrial production following a consumption tax increase in April, but subsequent data releases indicated that a recovery was already under way towards the end of 2Q14 and that the economy was returning to a growth path. Eurozone data remained in line with a very gradual recovery, although a renewed decline in French business sentiment emerged.

The European Central Bank (ECB) announced a range of new policy initiatives in June, including cuts in policy rates and new liquidity measures for banks. The ECB signaled that the policy rates would most likely remain unchanged until the end of 2016. At its meeting in June, the US Federal Reserve (Fed) reduced its monthly asset purchases to USD 35 billion effective as of July 2014. The Bank of England (BoE) indicated that a first policy rate increase as early as 4Q14 was possible. Among emerging markets, central banks in Turkey and Mexico lowered their policy rates.

Major equity markets increased in 2Q14 amid improved economic momentum and higher risk appetite. Among developed markets, Japan rebounded after a decrease in the previous quarter, driven by fund flows, stable leading indicators (after the consumption tax increase) and reform expectations. The US equity market increase was mainly due to a quarter on quarter (QoQ) improvement in macroeconomic data. Emerging markets outperformed developed markets, benefiting from macro data stabilization in China and reform expectations in certain countries, including India. The energy sector led the quarter due to the surge in oil prices, reflecting geopolitical tensions in Iraq. Equity markets overall traded with lower volatility, as measured by the Chicago Board Options Exchange Market Volatility Index (VIX), for most of the quarter. Furthermore, risk appetite, as measured by the Credit Suisse equity risk appetite index, increased through the quarter. The Credit Suisse Hedge Fund Index increased 1.9% in 2Q14.

### Yield curves

Yield curves decreased for most currencies, particularly long-dated yields.

**Volatility**

%

**Source:** Datastream, Credit Suisse

Growth concerns and continued indications from most major central banks to maintain low policy rates helped major government bonds to post a positive performance in 2Q14, especially for long-dated maturities. While the approaching potential policy rate rise by the BoE led to an increase in short-dated UK Gilt yields, 2-year yields remained broadly stable in the US and decreased in the eurozone, with the ECB engaging in further easing measures (refer to the charts "Yield curves"). Credit markets posted a solid performance in 2Q14. After a mixed performance in 1Q14, emerging market hard currency bonds were one of the best performing fixed income asset classes, benefiting from lower US Treasury yields and a significant spread tightening (refer to the chart "Credit spreads").

The performance of the US dollar against most major currencies was mixed in 2Q14. The euro depreciated against the US dollar in May as the ECB announced its easing measures. However, the US dollar pared some of its gains in June on a further downward growth revision of 1Q14 GDP and a cautious economic outlook from the Fed. The British pound appreciated as the BoE indicated that it may increase interest rates as economic improvement continues. The Japanese yen strengthened slightly against the US dollar as the Japanese economy weathered the impact of the consumption tax increase in April fairly well.

Following firm gains in 1Q14, broad-based commodity indices rose further in 2Q14. Energy markets emerged as major return contributors while the agriculture segment retraced 1Q14 gains, as weather-related supply concerns proved less severe than feared. Intensified geopolitical turmoil in the Middle East drove oil prices higher. Low yields and elevated geopolitical concerns helped gold increase slightly.

## Credit spreads

Credit spreads tightened in 2Q14.

### SECTOR ENVIRONMENT

Banks underperformed the market in 2Q14 with a strong relative selloff towards the end of the quarter. European bank stocks fell 2.7% in 2Q14, underperforming the MSCI World Index by 6.4% (refer to the charts 'Equity Markets'). North American bank stocks increased slightly.

In private banking, clients maintained a cautious investment stance, with cash deposits remaining high despite further falling interest rates. The low interest rate environment continued to adversely impact earnings.

The Swiss National Bank (SNB) reiterated concerns about the build-up of imbalances in mortgage and real estate markets in Switzerland. The Swiss Bankers Association announced further self-regulatory measures, including faster amortization requirements for mortgages, and the government announced its intention to review policies allowing for pension system withdrawals for the funding of real estate. Overall the wealth management sector continued to adapt to further industry-specific regulatory changes.

For investment banking, global equity trading volumes decreased compared to 1Q14 but increased compared to 2Q13. Global announced mergers and acquisitions (M&A) volumes increased significantly compared to 1Q14 and 2Q13. Global completed M&A volumes decreased significantly compared to both 1Q14 and 2Q13. Global equity underwriting volumes were significantly higher compared to 1Q14 and 2Q13, mainly driven by Europe. Global debt underwriting volumes increased compared to both 1Q14 and 2Q13. US fixed income volumes were stable compared to 1Q14. Compared to 2Q13, US fixed income volumes decreased with particularly weaker mortgage-backed volumes, and with lower treasuries, corporates and federal agency volumes.

# Credit Suisse

In 2Q14, we recorded a net loss attributable to shareholders of CHF 700 million. Diluted earnings per share from continuing operations were CHF (0.45) and return on equity attributable to shareholders was (6.7)%.

As of the end of 2Q14, our Basel III CET1 ratio was 13.8% and 9.5% on a look-through basis. Our risk-weighted assets were stable at CHF 285.4 billion compared to 1Q14.

### INFORMATION AND DEVELOPMENTS

#### Format of presentation

In managing the business, revenues are evaluated in the aggregate, including an assessment of trading gains and losses and the related interest income and expense from financing and hedging positions. For this reason, individual revenue categories may not be indicative of performance.

As of January 1, 2013, the Basel Committee on Banking Supervision (BCBS) Basel III framework was implemented in Switzerland along with the Swiss "Too Big to Fail" legislation and regulations thereunder. Our related disclosures are in accordance with our current interpretation of such requirements, including relevant assumptions. Changes in the interpretation of these requirements in Switzerland or in any of our assumptions or estimates could result in different numbers from those shown in this report.

References to Swiss leverage exposure refer to the aggregate of balance sheet assets, off-balance sheet exposures, consisting of guarantees and commitments, and regulatory adjustments, including cash collateral netting reversals and derivative add-ons.

▸ Refer to "Swiss leverage ratio" in II – Treasury, risk, balance sheet and off-balance sheet – Capital management – Swiss capital metrics for further information.

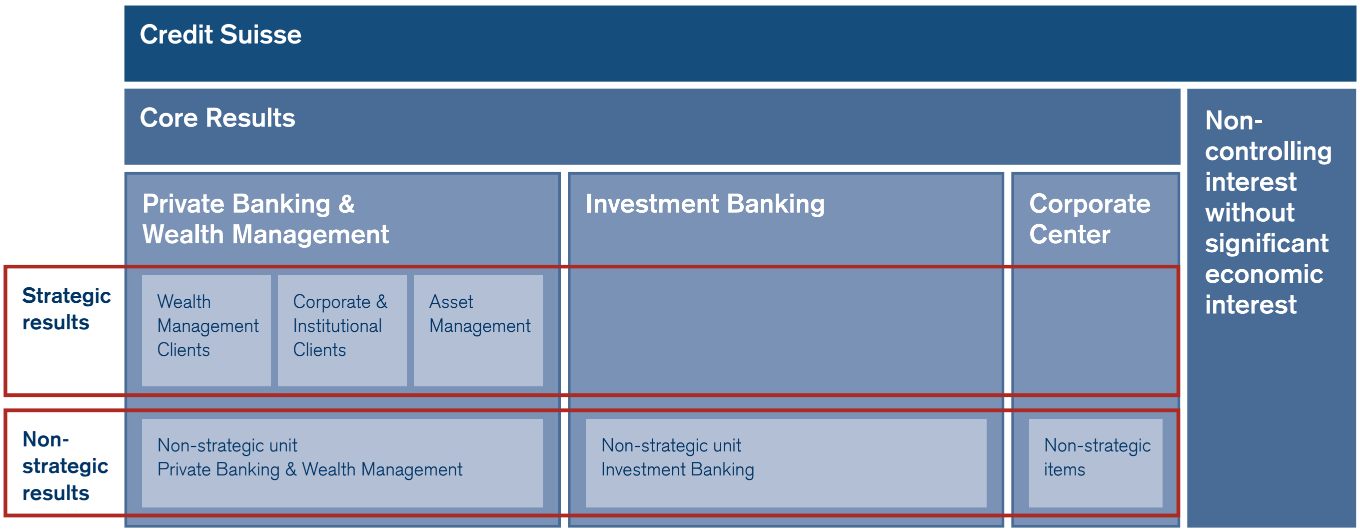
Beginning in 2Q14, the majority of the balance sheet usage related to a portfolio of high-quality liquid assets previously recorded in the Corporate Center has been allocated to the business divisions. Prior periods have been restated for the related impact on assets and Swiss leverage exposures.

▸ Refer to "Liquidity risk management framework" in II – Treasury, risk, balance sheet and off-balance sheet – Liquidity and funding management for further information.

#### Discontinued operations

The Private Banking & Wealth Management division completed the sale of our Customized Fund Investment Group (CFIG) business in January 2014, and in 4Q13 announced the sale of our domestic private banking business booked in Germany to ABN AMRO, which is expected to close in the course of 2014. These transactions qualify for discontinued operations treatment under US generally accepted accounting principles (US GAAP), and revenues and expenses of these businesses and the relevant gains on disposal are classified as discontinued operations in the Group's consolidated statements of operations. In the Private Banking & Wealth Management segment, the gains and expenses related to the business disposals are included in the segment's non-strategic results. The reclassification of the revenues and expenses from the segment results to discontinued operations for reporting at the Group level is effected through the Corporate Center.

## Credit Suisse reporting structure



Credit Suisse results include revenues and expenses from the consolidation of certain private equity funds and other entities in which we have noncontrolling interests without significant economic interest (SEI) in such revenues and expenses. Core Results include the results of our two segments and the Corporate Center and discontinued operations, but do not include noncontrolling interests without SEI.

### Board of Directors changes

At our Annual General Meeting (AGM) in May 2014, shareholders elected Severin Schwan and Sebastian Thrun as new members of the Board of Directors. Walter B. Kielholz and Peter Brabeck-Letmathe, having reached the internal term limits, retired from the Board of the Directors at the AGM 2014. The Chairman Urs Rohner and the other existing members of the Board of Directors proposed for re-election were all elected for a further term of one year.

### Capital distribution

At our AGM in May 2014, shareholders approved a distribution in cash against reserves from capital contributions of CHF 0.70 per registered share.

### Fair valuations

Fair value can be a relevant measurement for financial instruments when it aligns the accounting for these instruments with how we manage our business. The levels of the fair value hierarchy as defined by the relevant accounting guidance are not a measurement of economic risk, but rather an indication of the observability of prices or valuation inputs.

▸ Refer to "Note 1 – Summary of significant accounting policies" and "Note 27 – Financial instruments" in III – Condensed consolidated financial statements – unaudited for further information.

Models were used to value financial instruments for which no prices are available and which have little or no observable inputs (level 3). Models are developed internally and are reviewed by functions independent of the front office to ensure they are appropriate for current market conditions. The models require subjective assessment and varying degrees of judgment depending on liquidity, concentration, pricing assumptions and risks affecting the specific instrument. The models consider observable and unobservable parameters in calculating the value of these products, including certain indices relating to these products. Consideration of these indices is more significant in periods of lower market activity.

As of the end of 2Q14, 45% and 30% of our total assets and total liabilities, respectively, were measured at fair value.

While the majority of our level 3 assets are recorded in Investment Banking, some are recorded in Private Banking & Wealth Management's Asset Management business, specifically certain private equity investments. Total assets at fair value recorded as level 3 decreased by CHF 0.4 billion during 2Q14, primarily due to a decrease in loans held-for-sale and loans. The decrease in loans held-for-sale primarily reflected net settlements and transfers out of level 3 loans held-for-sale, partially offset by realized and unrealized gains. The decrease in loans primarily reflected net sales.

Our level 3 assets, excluding assets attributable to noncontrolling interests and assets of consolidated variable interest entities (VIEs) that are not risk-weighted assets under the Basel framework, were CHF 30.2 billion, compared to CHF 30.0 billion as of the end of 1Q14. As of the end of 2Q14, these assets comprised 3% of total assets and 8% of total assets measured at fair value, both adjusted on the same basis, compared to 4% and 8%, respectively, as of the end of 1Q14.

We believe that the range of any valuation uncertainty, in the aggregate, would not be material to our financial condition, however, it may be material to our operating results for any particular period, depending, in part, upon the operating results for such period.

**Regulatory developments and proposals**

Government leaders and regulators continued to focus on reform of the financial services industry, including capital, leverage and liquidity requirements, changes in compensation practices and systemic risk.

On 30 April 2014, the Swiss Federal Council approved an encompassing revision of the Swiss Federal Ordinance on Banks and Savings Banks (Banking Ordinance). The revision includes the implementation of the new Swiss accounting legislation of the Swiss Code of Obligations, in force since January 1, 2013, for Swiss banks as well as new regulations regarding unclaimed assets. The revision will enter into force on January 1, 2015, but certain regulations, such as the individual valuation of participations, are subject to transitional provisions until full implementation on January 1, 2020. On June 6, 2014, the Swiss Financial Market Supervisory Authority FINMA (FINMA) published Circular 2015/1 "Accounting – Banks" which, in conjunction with the revised Banking Ordinance, contains the new accounting guidelines and reporting duties for Swiss financial groups and conglomerates, banks and securities dealers, including us. Circular 2015/1 will enter into effect on January 1, 2015.

On May 6, 2014, Switzerland, along with other 46 countries and the European Union, endorsed the Declaration on Automatic Exchange of Information in Tax Matters at the Ministerial Council Meeting of the Organization for Economic Co-operation and Development (OECD). The Declaration commits countries to implement a new single global standard on automatic exchange of information. The standard, which was developed at the OECD and endorsed by G20 finance ministers in February 2014, obliges countries and jurisdictions to obtain all financial information from their financial institutions and exchange that information automatically with other jurisdictions on an annual basis. As a consequence of Switzerland's endorsement, on May 21, 2014, the Swiss Federal Council proposed negotiation mandates to introduce the new global standard with partner states, including switching to Model 1 under the Foreign Account Tax Compliance Act (FATCA), which would provide for the automatic exchange of information with the US tax authority. It is expected that the negotiation mandates be approved by the Swiss Federal Council during the second half of 2014. The results of the negotiations and the proposed legislation would then need to be submitted to the Swiss Parliament.

On June 2, 2014, the agreement on cooperation to simplify the implementation of FATCA between Switzerland and the US entered into force. The corresponding implementing act entered into force on June 30, 2014. FATCA implementation in Switzerland is based on Model 2, which means that Swiss financial institutions disclose account details directly to the US tax authority with the consent of the US clients concerned, and that the US has to request data on recalcitrant clients through normal administrative assistance channels. The agreement is expected to reduce the administrative burden for Swiss financial institutions associated with the implementation of FATCA. FATCA requirements entered into force on July 1, 2014.

On June 4, 2014, the US Commodity Futures Trading Commission (CFTC) issued a no-action letter that extends from September 15, 2014 until December 31, 2014 the expiration date for relief from a staff advisory stating that CFTC "transaction-level" requirements, such as mandatory clearing, mandatory exchange trading, real-time public reporting and external business conduct, apply to a swap between a non-US swap dealer, such as Credit Suisse International (CSI) or Credit Suisse Securities Europe Limited (CSSEL), and another non- US person if the swap is arranged, negotiated or executed by US personnel or agents of the non-US swap dealer.

On June 23, 2014, the Swiss Federal Council decided that the amendments to the Tax Administrative Assistance Act approved by the Swiss Parliament in March 2014 shall enter into force on August 1, 2014. The purpose of the amendments is to comply with international standards, and they relate to the deferred notification of parties concerned and the establishment of a special procedure for informing parties affected by a group request.

On June 25, 2014, the US Securities and Exchange Commission (SEC) adopted final rules addressing the cross-border application of the Dodd-Frank Act's "security-based swap dealer" and "major security-based swap participant" definitions. While the rules do not impose any affirmative compliance requirements, they include the "US person" definition and certain other key elements of the SEC's framework for when the Dodd-Frank Act's security-based swap reforms apply to non-US dealers, such as Credit Suisse. In many respects, the SEC's rules are similar to parallel guidance issued by the CFTC in July 2013. However, the SEC did not address the treatment of swaps between a non-US dealer and non-US counterparty that involve US personnel, an issue of particular importance to Credit Suisse. As a result, the overall impact of the SEC's security-based swap reforms on Credit Suisse continues to depend on future SEC rulemakings. In addition, based on statements by SEC officials in connection with the adoption of these rules, we now expect the SEC's implementation of the derivatives provisions of the Dodd-Frank Act to continue throughout 2014 and into 2015.

On June 27, 2014, the Swiss Federal Council published the draft Federal Financial Services Act (FFSA) and draft Financial Institutions Act (FinIA) for consultation. The FFSA governs the prerequisites for providing financial services, including the resolution of disputes related thereto, and for offering financial instruments. The draft FinIA provides for a differentiated supervisory regime for financial institutions. The consultation period runs until October 17, 2014.

# Core Results

In 2Q14, we recorded a net loss attributable to shareholders of CHF 700 million. Net revenues were CHF 6,433 million and total operating expenses were CHF 6,785 million.

In our strategic businesses, we reported income from continuing operations before taxes of CHF 1,767 million and in our non-strategic businesses we reported a loss from continuing operations before taxes of CHF 2,137 million in 2Q14.

### RESULTS OVERVIEW

**Core Results net revenues** of CHF 6,433 million decreased 6% compared to 2Q13.

In our strategic businesses, net revenues of CHF 6,324 million decreased 7% compared to 2Q13, with a decrease in Private Banking & Wealth Management and Investment Banking. The decrease in Private Banking & Wealth Management primarily reflected lower transaction- and performance-based revenues and decreased net interest income. The decrease in Investment Banking was driven by less favorable trading conditions in equity sales and trading businesses and continued weakness in global macro products, particularly in foreign exchange and commodities.

In our non-strategic businesses, we reported net revenues of CHF 109 million in 2Q14, compared to net revenues of CHF 35 million in 2Q13, with an increase in Investment Banking, partially offset by a decrease in Private Banking & Wealth Management. Improved results in Investment Banking reflected net valuation gains in our portfolio and lower funding costs from proactive management of both our legacy debt instruments and trading assets. The decrease in Private Banking & Wealth Management primarily reflected lower recurring commissions and fees due to the sale in prior quarters of businesses relating to the restructuring of the former Asset Management division.

▸ Refer to "Private Banking & Wealth Management", "Investment Banking" and "Corporate Center" for further information.

**Provision for credit losses** of CHF 18 million in 2Q14 reflected net provisions of CHF 23 million in Private Banking & Wealth Management and releases of CHF 5 million in Investment Banking.

**Total operating expenses** of CHF 6,785 million were up 30% compared to 2Q13, primarily reflecting 84% higher general and administrative expenses. In strategic businesses, total operating expenses of CHF 4,532 million decreased 3% compared to 2Q13, mainly reflecting an 18% decrease in commission expenses and a 5% decrease in general and administrative expenses. In non-strategic businesses, total operating expenses of CHF 2,253 million increased 307% compared to 2Q13, reflecting the litigation settlement charge of CHF 1,618 million relating to the final settlement of all outstanding US cross-border matters recognized in the non-strategic results of the Private Banking & Wealth Management division.

**Income tax expense** of CHF 307 million recorded in 2Q14 reflected the impact of the geographical mix of results, the recognition of additional Swiss deferred tax assets relating to timing differences following certain changes in Swiss GAAP and the re-assessment of UK deferred tax assets resulting in a reduction of deferred tax assets on net operating losses. Overall, net deferred tax assets decreased CHF 122 million to CHF 5,134 million as of the end of 2Q14 compared to 1Q14. Deferred tax assets on net operating losses decreased CHF 678 million to CHF 758 million during 2Q14. The Core Results effective tax rate was (83.0)% in 2Q14, compared to 38.8% in 1Q14. The effective tax rate reflects that the majority of the litigation settlement charge was non-deductible. Excluding this impact, the Core Results effective tax rate for 2Q14 would have been 26.2%.

▸ Refer to "Note 21 – Tax" in III – Condensed consolidated financial statements – unaudited for further information.

### Significant litigation matter in 2Q14

In May 2014, we entered into a comprehensive and final settlement regarding all outstanding US cross-border matters, including agreements with the US Department of Justice (DOJ), the New York State Department of Financial Services, the Board of Governors of the US Federal Reserve System and, as previously announced, the SEC. The final settlement amount was USD 2,815 million (CHF 2,510 million). In prior quarters, we had taken litigation provisions totaling CHF 892 million related to this matter. As a result, a pre-tax litigation settlement charge of CHF 1,618 million was recognized in 2Q14 in the non-strategic results of the Private Banking & Wealth Management division. The settlement included a guilty plea entered into by our Swiss banking entity, Credit Suisse AG.

▸ Refer to "Note 29 – Litigation" in III – Condensed consolidated financial statements – unaudited for further information.

A significant portion of our business requires inter-regional coordination in order to facilitate the needs of our clients. The methodology for allocating our results by region is dependent on management judgment. For Wealth Management Clients and Corporate & Institutional Clients, results are allocated based on the management reporting structure of our relationship managers and the region where the transaction is recorded. For Asset Management, results are allocated based on the location of the investment advisors and sales teams. For Investment Banking, trading results are allocated based on where the risk is primarily managed and fee-based results are allocated where the client is domiciled.

### Key performance indicators

Our key performance indicators (KPIs) for the Group and for our Private Banking & Wealth Management and Investment Banking divisions reflect our strategic plan, the regulatory environment and the market cycle. Our stated KPIs are measured on the basis of reported results.

We believe the execution of our strategic initiatives including the run-off of non-strategic operations, will enable us achieve our targets over a three to five year period across market cycles.

▸ Refer to "Key performance indicators" in Private Banking & Wealth Management and Investment Banking results for further information on divisional KPIs.

### Collaboration revenues

Collaboration revenues are calculated as the percentage of the Group's net revenues represented by the aggregate collaboration revenues arising when more than one of the Group's divisions participate in a transaction. Within the Private Banking & Wealth Management division, collaboration revenues include revenues arising from cross-selling and client referral activities between the Wealth Management Clients and Corporate & Institutional Clients businesses on the one hand and the Asset Management and the securities trading and sales businesses on the other hand.

▸ Refer to "Key performance indicators" in II – Operating and financial review – Core Results – Information and developments in the Credit Suisse Annual Report 2013 for further information on key performance indicators including collaboration revenues.

## Key performance indicators

Our KPIs are targets to be achieved over a three to five year period across market cycles. As such, year to date results may be more meaningful than individual quarterly results. Our KPIs are assessed annually as part of our normal planning process and may be revised to reflect our strategic plan, the regulatory environment and market and industry trends.

| Look-through CET1 ratio [3] | 11% | 9.5 | 9.5 | 10.0 | – |

1 Source: Bloomberg. Total shareholder return is calculated as equal to the appreciation or depreciation of a particular share, plus any dividends, over a given period, expressed as a percentage of the share's value at the beginning of the period.
2 The peer group for this comparison comprises Bank of America, Barclays, BNP Paribas, Citigroup, Deutsche Bank, Goldman Sachs, HSBC, JPMorgan Chase, Morgan Stanley, Nomura, Société Générale and UBS. The total shareholder return of this peer group is calculated as a simple, unweighted average of the return reported by Bloomberg for each of the members of the peer group.
3 Updated in 1Q14 from a previous target of a Look-through Swiss Core Capital ratio above 10%.

### Personnel

Headcount at the end of 2Q14 was 45,100, down 500 from 1Q14 and down 1,200 from 2Q13. The decrease in 2Q14 reflected headcount reductions in Private Banking & Wealth Management and Investment Banking resulting from our cost efficiency initiatives, partly offset by contractor employee conversion and graduate hiring.

## Number of employees by division

| end of | **2Q14** | 1Q14 | 2Q13 |
|---|---|---|---|
| **Number of employees by division (full-time equivalents)** | | | |

[1] Core Results include the results of our integrated banking business, excluding revenues and expenses in respect of noncontrolling interests without SEI.
[2] Calculated using income after tax denominated in CHF; assumes tax rate of 30% in 2Q14, 1Q14 and 2Q13 and capital allocated based on average of 10% of average risk-weighted assets and 2.4% of average leverage exposure.
[3] Represents risk-weighted assets on a fully phased-in "look-through" basis.

### Cost savings and strategy implementation

We continued to adapt our client-focused, capital-efficient strategy to optimize our use of capital and improve our cost structure. We target cost savings of CHF 3.8 billion by the end of 2014 and more than CHF 4.5 billion by the end of 2015. These targets are measured against our annualized 6M11 expense run rate measured at constant foreign exchange rates and adjusted to exclude business realignment and other significant non-operating expenses and variable compensation expenses.

The majority of the expected future savings is expected to be realized from shared infrastructure and support services across the Group, mainly through the consolidation of fragmented and duplicate functions globally and the continued consolidation of IT applications and functions.

We have also targeted further savings within our two operating divisions. Within Private Banking & Wealth Management, we expect to deliver cost benefits from the creation of the integrated Private Banking & Wealth Management division, exiting a number of small non-strategic markets, repositioning select non-profitable onshore operations, rationalization of front office and support functions, including simplification of our operating platform, streamlining of the offshore affluent and Swiss client coverage model and from announced divestitures. Within Investment Banking, we expect to deliver cost benefits from the restructuring of our rates business, the initiatives already completed in 2012, from continuing to review and realize efficiencies across business lines and geographic regions and from continuing to refine our business mix and align resources with highest returning opportunities. We expect to incur approximately CHF 0.9 billion of costs associated with these measures during the remainder of 2014 and 2015.

We incurred CHF 153 million of business realignment costs and CHF 81 million of IT architecture simplification expenses associated with these measures in 2Q14.
